FIVE

WELCOME TO THE WORLD OF FIVE GLOVES.

FIVE: Our name rings out loud and clear, since our mission is to protect hands (and the FIVE fingers that come with it...) during activities that require high-performance technical gloves, such as riding a two-wheeled vehicle. For over fifteen years now, we've been helping riders enhance their enjoyment at the handlebar, while protecting hands from injury in case of a fall, by equipping millions of motorcycle enthusiasts around the world. Gloves are an item designed for safety, but also for comfort.

OUR COMMITMENT CAN BE STATED IN THREE WORDS: **PROTECTION FITTING DESIGN.**

PROTECTION – because your hands are essential. Imagine having to spend even a single day without using one of your hands due to an injury, even one that's not serious. The smallest activity would be truly difficult, and the discomfort would be highly distressing. Protecting your hands is crucial. We don't always think about it, but as a reflex, we tend to put our hands out in front of us if we fall. They are, therefore, particularly exposed. Our goal is to reduce the risk of specific injuries related to motorcycle riding.

FITTING – because gloves form the link between you and your motorcycle. To truly savor piloting your motorcycle, this connection should be seamless, allowing for perfect responsiveness each time you touch the controls, whether you're accelerating, braking, or changing direction. Feeling every move at the controls (and, by extension, every movement of your motorcycle) is essential. It's even further proof of safety. And this should happen with a certain amount of comfort. Our desire is clearly to enhance the enjoyment you feel when riding your motorcycle.

DESIGN – because we consider a functional aesthetic to be especially important. In our view, the shape of each piece that makes up a glove stems from the role it plays in its use (protection, comfort, ventilation, abrasion resistance, etc.). This is why we design and craft each element independently, without using any standard pieces, so that a FIVE glove is exclusive and distinctive. Our designs are often imitated, but never equaled! So, you might as well choose the original, FIVE.

OUR CRAFT, **WE ARE GLOVE SPECIALISTS.**

Hands have the particular complexity of being extremely sensitive parts of the body (sensitive to cold, heat, and collisions), highly exposed in case of a fall, and replete with a number of small, fully articulated elements (bones, tendons, muscles, blood vessels). More than anything, it's through our hands that we experience one of our five senses, the sense of touch. In other words, the very least element of a glove that's badly designed or wrongly placed is immediately uncomfortable. A badly fitting glove or one that's not right for your body type or riding style can considerably diminish your riding pleasure, or even ruin what promised to be a great ride, because your attention would be focused on the discomfort rather than the beauty of the landscapes you're experiencing. A glove should therefore perfectly mold to the curves of your hand as it grips the handlebars and controls and allow for total freedom of movement of each and every joint. This is why our gloves are pre-shaped and why we take care to perfectly position protective elements, just as we do those that enable joint movement.

As you can see, you can't just design a pair of gloves like you do a piece of clothing. The glove is not just a simple extension of your jacket, contrary to what non-specialist brands may lead you to believe. In terms of gloves, the approach has to be even more technical, due to the small size of the pieces assembled, their number, and the freedom of movement of the hand that is hard to obtain, yet indispensable. Because, by definition, layering levels of fabric and protective elements can swiftly end up hindering the mobility of the hand, if real expertise isn't used. This is why we've made the choice to become THE Glove Specialist, because we believe in the virtues of specialization and expertise. It's hard to imagine how complex designing an effective, high-performance glove can be. Designing an "aesthetically pleasing" glove, like many brands do, is relatively easy. Creating a glove that's functional and both elegant, comfortable, and protective, no matter the size, and for mass production, presents a whole other challenge. This is our vocation. We're no cleverer, nor more intelligent, than general gear providers. We want to offer gloves that are far better than average, because that's all we make. We dedicate all our efforts and endless hours, day after day, with each passing month and every year, to just one product: gloves! And this is how we can keep developing our expertise and constantly improving the quality of our products.

A FIVE GLOVE FREQUENTLY **OFFERS JUST THAT MUCH MORE.**

Beyond the idea of comfort and perfect fit, a FIVE glove often offers so much more than competitors' gloves, if you truly look at the details. It's not necessarily obvious when you purchase them, but this makes a huge difference when you wear and use them, in terms of comfort, the level of protection, and durability. When you compare the materials that make up FIVE gloves from the rest of what's out there on the market, you'll see that, compared to products that are "supposedly comparable" (in terms of price, for example), FIVE frequently offers so much more. From authentic, full-grain leather, when competitors are offering synthetic leather...to real Carbon, when others only offer basic plastic with a carbon look...to Kevlar® lining, when other manufacturers offer no reinforced lining. And then, there's the external stitching, which offers greater comfort but is harder to make, as opposed to standard seams, etc. Our motto: offering the best possible product at the best possible price. The qualities of a FIVE glove can truly be appreciated once it's worn, even more than in-shop.

USING THE FINEST COMPONENTS AND MATERIALS: THIS IS THE FIVE HALLMARK.

We utilize optimal technology in our products, which leads us to select renowned technical partners, such as GORE-TEX® (weatherproof membrane), Primaloft®, and Dupont de Nemours® (Kevlar®) Gütermann® (for threads that are durable, yet don't cut into the skin), and adopt their innovations for our most advanced products. For example, we were the first to use Nanofront®, an absorbent, non-slip material from Japan, on the palm of our high-end motocross glove, for peerless grip.

WE'RE NOT CONTENT TO SIMPLY DESIGN OUR PRODUCTS, WE MAKE THEM IN OUR OWN PARTNER FACTORIES.

Our technicians and colleagues are on site to make sure that each glove that emerges from our production lines is consistent with the initial guidelines set forth by our R&D department in France and our technical lab in Italy, which has developed expertise in gloves over several generations and ensures that our patterns (and our gloves) are in perfect working order...from the smallest to the very largest sizes!

Our gloves are designed to cover the hand, but they are also "hand" made, by expert workers and seamstresses. Making a glove requires a considerable number of manual steps, whether it's making pieces of the protective elements, cutting, embellishing, assembling, or sewing the elements that compose it. These workers handle the fabrics and rigid pieces and assemble them using a "plain old" sewing machine, with almost unbelievable dexterity. One of the essential aspects of the comfort and proper fit of a glove is the attention given to its assembly. At FIVE, our precision standard in terms of the stitches assembling the fingers, for example, is two times more precise than standard practices in the industry. This lower tolerance for gaps in the alignment of stitches creates an extra constraint for our workers and requires them to be particularly attentive. Nevertheless, it is absolutely essential for a perfect fit, and this is one of the keys to FIVE's expertise.

Producing in our partner factories allows us to maintain perfect control over our output, including in quality management. It is precisely because our gloves are assembled by human beings, and not by robots (which would be unable to copy the movements of a seamstress), that sometimes a slight gap identified at the moment of assembly creates the need for stitching that may loosen over time. This remains an exception and affects less than 1% of our total output (0.6%, to be exact), a level well below industry averages. We are proud of this low rate (zero errors simply does not exist) and take responsibility for it, to the advantage of our clients, with Premium product support through our international sales network, in order to provide total satisfaction to users of FIVE gloves.

THE DEVELOPMENT OF FIVE GLOVES IS BASED ON REAL FEEDBACK.

It's in collaborating with top-level riders and listening to the needs of and feedback from thousands of users throughout the world that we are able to develop ever more comfortable and protective gloves. We test our gloves under the extreme conditions offered by top-level competition, before we bring them to market. And the innovations we decide to use for racing benefits the amateur products in our range. Our official riders take part in MotoGP, Moto3, Superbike, Supersport, Endurance, Supermoto, Motocross, and Enduro world championships... They wear FIVE gloves on racetracks throughout the world and actively contribute to the evolution of our products. And so, when Michele PIRRO took a spill at over 300 kms/h at Mugello in 2018, and got up without a scratch on his hands, we were truly happy and proud to be his equipment partner. Unwittingly, he helped us study how our gloves perform in a real-life situation, well beyond any tests we carry out in a lab. In the same way, when Peter HICKMAN won the Isle of Man Tourist Trophy (the fastest

and undoubtedly most dangerous road race in the world) - setting the average speed record at 136 mph -, when Dominique AEGERTER becomes double Supersport World Champion in 2021 and 2022, when team YART becomes 2023 Endurance World Champion, when Thomas CHAREYRE was crowned 8-time Supermoto World Champion, or Steve HOLCOMBE took several Enduro World Championship titles, all of them wearing FIVE gloves, we can't help thinking that our products do, in fact, deliver the goods for the most demanding riders and athletes. Though riders are at the very heart of our product development strategy, it's also a matter of passion. Because all of us at FIVE share a love affair with motor sports. In fact, we have several former professional riders now working for us at the office, and we feel blessed to share great friendships with a number of champions, who have worn or still wear our gloves. We're always proud to see our official riders raising up their trophies and breaking out the champagne on the podium, wearing FIVE gloves, a sign that these gloves have truly done their job during the race. ;) But, above all, we design and make our gloves for our clients. For you, who ride every day or simply for pleasure. Thus, we always listen to you and want to have your feedback on our products, so we can learn from experience and ensure that future generations of our gloves include all these evolutions.

Thanks to all of you, who choose to ride in FIVE gloves ;)

MAKE THE RIGHT CHOICE IN GLOVES.

To choose the right glove for you, several factors come into play. The type of motorcycle you're riding. The season you'll be using it in (Should it be ventilated? Does it need to be heated?). The average distance you'll be covering. How often you'll be using it. The level of protection and comfort required. Your budget. Though, in theory, the more a glove protects, the less comfortable it is, our entire job at FIVE is about flipping this equation and making an ultra-protective glove truly comfortable...and vice-versa. Obviously, no glove can totally protect you in case of an accident. That being said, FIVE gloves are designed to limit the risks of injury and meet CE Moto standards (with the corresponding label sewn inside, which features the Moto icon required in certain countries) on 3 different levels: CE (gloves without protective shells), CE KP1 (gloves with protective shells, providing an adequate level of protection), and CE KP2 (gloves with protective shells, providing a superior level of protection). We think that each type of motorcycle and rider deserves a specifically adapted glove. But this hasn't stopped us from offering certain multipurpose, cross-category products. This is the purpose of this catalogue, where you can discover

our products, down to every last detail. They are categorized according to different product groups: Racing, Street, Urban, Custom, Adventure, Winter, Heating Technology, Woman, and Off-Road, from the top-level product to the most affordable one. And you'll find the summary of our collection at the end of the catalogue, to provide you with a full overview in a flash. Choosing a FIVE glove shows a certain pragmatic spirit: You want the best possible glove for riding your motorcycle, and you know that you'll find it among the 102 styles that make up our 2024 collection! THE perfect glove for you does, in fact, exist in the pages of this catalogue. Now we'll let you sit back and discover which one is yours, and, especially, encourage you to try it on at one of our many FIVE OFFICIAL DEALERS all over the planet (with whom we share our experience and real solutions to make the most of their glove selection), before you undoubtedly slip it on and enjoy a ride with it.

RACING

FROM MOTOGP
RACING TO EVERYDAY
SPORT RIDING.

This range is the product of FIVE's experience at the very highest level of international competition. Across all disciplines, MotoGP, Superbike, Supersport, and Endurance, gloves from the Racing range are designed for precision steering, both on the track and on the road*.

They offer riders guaranteed efficiency, high performance, and protection. Maybe you'll never ride on a track, but what does it matter? Though some of our Racing gloves are clearly made for competition, others are more multi purpose in nature and will be perfect at the helm of your own machine for everyday riding... as long as you have that sport bike spirit.

Many famous riders have chosen FIVE gloves during their careers, and each of them has contributed to the development of the styles you'll discover today. Some of the big names include: Andrea DOVISIOSO, Stéphane CHAMBON, Fabio QUARTARARO, Karel ABRAHAM, Jules CLUZEL, Peter HICKMAN, Sébastien CHARPENTIER, Dominique AEGERTER and many others. With their help, we're proud to present the most advanced Racing range that has ever been made for mass production.

The RACING collection includes three sub-categories: RACING Performance gloves are designed to perform on track and on road, offering different levels of protection, while RACING Sport gloves are designed more specifically for road sport use. RACING WP models are waterproof gloves allowing to ride a sport bike on road to stay dry when it rains.

* Piloting a sport bike involves risk. FIVE gloves that are CE-certified, CE KP1 or CE KP2, are designed to reduce the effects of a fall; nevertheless, no glove can completely prevent the risk of injury. Ride safely!

RFX RACE

THE MOST PROTECTIVE GLOVE ON EARTH.

The most advanced FIVE ADVANCED GLOVES™. Designed for high performance, the RFX RACE offers the highest level of safety currently available, thanks to its triple protective shell made of Thermoset Carbon Composite. This material, generally found in aerospace or Formula 1, provides exceptional abrasion resistance. This makes the glove more effective than an ordinary glove in the extreme situation of a long skid where the rider's hand may be trapped between the road surface and the bike. Protection is maximized by the use of full grain leather, multiple reinforcements with traditional carbon and a Kevlar® lining. The palm features digital leather reinforcement for optimal grip in wet conditions. The velcro adjusting strap is concealed beneath a protective leather flap to reduce the risk of the glove being torn off in the event of a fall. The greatest attention has been paid to steering precision and comfort. RFX RACE: This is the glove designed and used by official FIVE riders in MotoGP, SBK and Endurance World Championships.

TECHNICAL FEATURES

01. 160 assembled elements per pair / 159g of technology per glove (size M)
02. Full-grain cowhide construction (topside) for durability / Full-grain goatskin (palm) for suppleness
03. Ventilated TPU metacarpal-knuckle and metacarpal protective shells reinforced with Carbon Thermoset for high abrasion resistance
04. Protective Carbon palm slider shell
05. Palm reinforcement in digital leather
06. Thenar muscle (palm) reinforcement with a SuperFabric® patch
07. Internal Kevlar® lining
08. Outer stitching on the fingers (Gütermann thread)
09. TPU protective shell on the forearm
10. Stretch Kevlar® comfort panel (topside)
11. Dual closure system, with adjustment tab underneath a protective flap
12. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)

RFX1 // RFX1 REPLICA

STRAIGHT OUT OF TOP-LEVEL COMPETITIVE RACING.

Racing glove designed for the racetrack and sports. The RFX1 includes ventilated PU knuckle shells and a large carbon shell to protect the forearm. It offers all the features of a top-of-the-line glove geared towards performance. Kevlar® lining, carbon reinforcements and full grain leather for protection, Stretch Kevlar® for comfort, a protective barrier for both the palm and the top of the hand, while providing an exceptionally lightweight fit. It also features new Stretch Kevlar® and leather construction (instead of all-leather) on the thumb, for improved comfort. The palm features reinforcement in digital leather for optimal grip in wet conditions. The velcro adjusting strap is concealed beneath a protective leather flap to reduce the risk of the glove being torn off in the event of a fall. This top-of-the-range Racing glove will delight demanding riders of sports bikes, who favor control sensitivity and fit, without overlooking safety. Available in standard and replica versions.

TECHNICAL FEATURES

01. Full-grain cowhide construction (topside) for durability / Full-grain goatskin (palm) for suppleness
02. Ventilated TPU metacarpal-knuckle protective shells
03. Protective Carbon palm slider shell
04. Palm reinforcement in digital leather

RFX2

FOR STARTING OUT ON THE TRACK.

After appearing as THE new Racing glove in 2020, the RFX2, our most affordable glove to get you started around the track and race, now features a new look that echoes the stylistic signatures of top-level competitive riding. It even adopts components used in more advanced styles, including the TPU cuff from the RFX Race, or the ventilated protective shells of the RFX1, and an internal Kevlar® lining, giving it all the features of a high-end glove. It offers an impressive level of performance, focused on an excellent comfort-to-protection ratio, with unequalled value for money in this category. Don't hesitate to examine every last detail of its technical specs: at a price like this, you'll definitely be convinced. In addition, its dynamic design makes it a glove that's just as beautiful to look at as it is to wear, even when you're idling. And that matters, when you love the sculpted curves of beautiful sport models.

TECHNICAL FEATURES

01. Full-grain goatskin and Stretch Cordura® construction (topside) / Goatskin (palm), for extreme suppleness
02. Ventilated TPU protective metacarpophalangeal shells
03. Metacarpal reinforcements in 5mm-thick foam rubber
04. Synthetic leather palm reinforcement with a silicone print for grip on the handlebars
05. Stretch Cordura® comfort panels around the thumb and the ends of the index and middle fingers
06. Internal Kevlar® lining on the top of the hand and around the thumb
07. External stitching on the fingers (in Gütermann thread)
08. TPU hypothenar protective shell (palm slider)
09. TPU protective forearm shell (identical to the one used on the RFX Race)
10. Dual closure system, with an adjustment tab under a protective flap
11. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)

RFX2 AIRFLOW

RACING SPIRIT,
TOP-CLASS VENTILATION!

The RFX2 AIRFLOW echoes the characteristics of the latest RFX2, making it a standard in ventilated gloves. For sport and road use, it features the ventilated topside TPU shells of the RFX1 and RFX2, but includes specific materials (perforated leather, mesh fabric) that offer optimal airflow. The mixed-material palm, in full-grain leather, perforated leather, and synthetic leather reinforcements for optimal grip, features a TPR protective slider shell on the hypothenar. Its PU cuff, a legacy of the exceptional RFX Race glove, offers extra protection on the forearm and gives the RFX2 a truly sleek and stylish look. The thumb and topside are in mesh fabric for maximum airflow. It also features gel reinforcements on the thumbs, for greater comfort at the controls. The RFX2 Airflow offers high-level protection, excellent fit, and, more than anything, effective ventilation that makes it the perfect glove for riding a sport bike in summertime.

TECHNICAL FEATURES

01. Perforated Full-grain goat-leather and mesh fabric construction, for ventilation (topside) / Goat leather on the palm side, for extreme suppleness
02. Ventilated TPU metacarpo-phalangeal protective shells
03. 5 mm-thick foam rubber metacarpal reinforcements
04. Synthetic leather palm reinforcement with silicone print for improved handlebar grip
05. Honeycombed 3D mesh panels around the thumbs and ends of the index and middle fingers
06. Internal Kevlar® lining on the topside of the hand
07. External stitching on the fingers (in Gütermann thread)
08. Hypothenar protective shell (palm slider) in TPR
09. Forearm protective shell in TPU (identical to the one used for the RFX Race)
10. Dual closure system, with adjustment tab underneath a protective flap
11. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)

RFX3 EVO

TOP PERFORMANCE AND TOTAL VERSATILITY,
ON THE ROAD OR THE TRACK.

Its modern look says it all: the RFX3 EVO outclasses its predecessor the RFX3, taking things to the next level. Introducing the first-ever product in our Racing range to use the new generation of AirGO PROTECH™ Performance shells. Inspired by helmet technology, with their rigid outer shell and soft internal honeycombed element made to absorb impact energy, they offer the best possible combination of ergonomic design, protection, and ventilation, and these shells are solid enough to earn a level 2 protective designation in and of themselves according to the CE standard, in other words, the highest level! In addition to this exceptional protection, the topside of the hand features comfort gussets and a Shock Protech panel in high-density foam underneath the leather on the metacarpals. The palm hosts an ERGO PROTECH® slider shell in soft TPR on the hypothenar, to protect you in case of a fall, without hindering your grip on the controls. The RFX3 EVO perfectly combines safety and comfort and is the style of choice for those who want precision sport-bike road riding and/or want to safely try out track riding. And further proof of its versatile and non-exclusive character lies in its Touch Screen™ system that allows you to use your electronic devices, making a rider's life easier every day. With its edge over all the others, the RFX3 EVO already possesses certain characteristics that will be featured in our highest-level next-gen Racing gloves...Stay tuned.

TECHNICAL FEATURES

01. Supple full-grain goat leather combined with synthetic leather topside construction
02. Supple full-grain goat leather palm
03. Perforated synthetic leather accordion to optimize the knuckle protector position
04. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
05. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
06. TPR finger protection with air intake vent
07. Forearm protection from an ergonomic TPR shell (slider) integrated into the cuff
08. Dual closure system, with adjustment tab underneath a protective flap
09. Anti-Twist accordion band between ring and pinky fingers to stop your fingers from being pulled apart if you fall (a FIVE innovation)
10. Hi-Res Grip™ palm reinforcement for optimal grip
11. Touch Screen system™ on index finger and thumb

RFX4 EVO

SOMEWHERE BETWEEN ROAD AND TRACK.

The RFX4 EVO made its debut in 2022 collection and is designed for riders who put comfort over performance and are looking for all the versatility of a sport glove...or all the sportiness of a versatile glove. :) By adopting the brand-new FIVE ERGO PROTECH® ergonomic protective shell used in both our urban and trail gloves, the RFX4 EVO offers a less aggressive look than that of the RFX1, RFX2 and RFX3. Though it fits in so naturally at the controls of a sportier bike, the RFX4 EVO is also right for riding a powerful scooter or a roadster, and thus, offers a more reassuring alternative to short gloves, which are more commonly used with this type of machine. It also offers the extra protection typical of Racing gloves, with all the comfort often found in less exclusive gloves. The RFX4 EVO is well and truly the perfect compromise between our road gloves and gloves for pure racing use.

TECHNICAL FEATURES

01. Full-grain goat leather construction (topside and palm) for suppleness
02. Semi-soft ERGO PROTECH® metacarpophalangeal protective shell
03. ERGO PROTECH® soft TPR hypothenar protective shell (palm slider)
04. PU palm reinforcement for better grip on the handlebars
05. Forearm protection featuring a leather panel and 3D TPR logo
06. Dual closure system with a velcro tab and a cuff adjustment tab
07. Comfort gussets on the wrist and fingers
08. Touch Screen™ system on index finger

RFX4 EVO AIRFLOW

THE VERSATILE, VENTILATED SPORT GLOVE.

As the ventilated version of the RFX4 EVO, the RFX4 EVO AIRFLOW is made for riders looking for breathable control at the handlebars as soon as temperatures start to rise, with a focus on comfort, rather than performance. Its construction is adapted to summer riding conditions, with a combination of perforated leather and ventilated mesh fabric. By adopting our new ergonomic AirGO PROTECH® protective shell featuring an air intake hood, the RFX4 EVO AIRFLOW ensures truly optimal ventilation. Though it's ideal behind the controls of a sport bike, the RFX4 EVO is just as suitable for a powerful scooter or a roadster and thus offers a more reassuring alternative to the shorter gloves that are typically used with this type of machine. The RFX4 EVO AIRFLOW provides the perfect transition between our road gloves and our pure sport gloves, for use in summertime riding conditions.

RFX SPORT

YOUR DAILY SPORT.

Launched in 2020, the RFX Sport is now the entry-level style for our Racing range. It's more focused on comfort than performance, and is designed for riders looking for an effective, accessible glove for everyday riding on a sport or road bike. It offers a more-than-satisfactory level of protection and comfort for road use, with its goatskin construction, main one-piece PVC shell concealed underneath the leather (perforated for an energetic look), multiple foam reinforcements, and TPR hypothenar protective shell. It deliberately retains a relatively classic look for a sport glove, so it can be your perfectly discreet companion from the road to the office.

TECHNICAL FEATURES

01. Full-grain goatskin construction (topside and palm) for extreme suppleness
02. PVC metacarpo-phalangeal protective shells under leather (perforated for a great look)
03. Stretch comfort gusset over the wrists
04. External stitching on the fingers
05. Palm and ring and little finger reinforcements in synthetic leather
06. TPR hypothenar protective shell (palm slider)
07. Dual closure system with an adjustment tab under a protective flap
08. Forearm protection from foam reinforcement under leather
09. Index, middle, little finger and thumb knuckle protection from foam under leather
10. Reflective night-time visibility panel
11. CE KP1

RFX^{WP}

THE HIGH-PERFORMANCE WEATHERPROOF GLOVE.

Designed to satisfy sport-bike aficionados who love to feel the road even when it rains, the RFX WP made a bold entrance into our Racing range. It's made for the open road, but is perfect for anyone who loves sport-inspired equipment. You're sure to fall for this glove, which looks a lot like the ones our official pro riders use, with exceptional control sensitivity and other qualities that make it enjoyable for everyday wear. So, it inherits details inspired by competitive riding, and at the same time, features refined details usually reserved for purely road, or even urban, riding. Its goat-leather construction with outside seaming, a cuff that emulates the RFX Race style, and its ERGO PROTECH® one-piece carbon shell, all make it look truly sporty. The 5_DRYTECH™ breathable, weatherproof membrane creates a barrier against the rain, and the anti-slip digital PU reinforcements and stretch, water-repellent fabric insets make it effective and fun to wear, even when the weather's bad. The Touch Screen™ and Clear Vision Pad™ systems will make it your faithful companion on everyday rides. It's deliberately uninsulated, so you can focus on performance, perfect for when temperatures are mild. The RFX WP now proudly takes its place within the FIVE collection as the sportiest of all our weatherproof gloves. It'll be your go-to glove as soon as the skies look threatening...

RFX4 EVO^{WP}

THE VERSATILE, WEATHERPROOF SPORT GLOVE.

As the weatherproof version of the RFX4 EVO dedicated to riding in rainy weather, the RFX4 EVO WP is made for riders who want comfort over performance and who are looking for a truly multifaceted sport glove...or, rather, for sporty appeal in a multipurpose glove. :) It hosts a breathable, weatherproof 5_Drytech™ membrane that's ideal for these conditions. With its ergonomic FIVE ERGO PROTECH® protective shell featured in all our urban or trail gloves, the RFX4 EVO WP opts for a look that will surely please a wide range of tastes. Though it makes perfect sense for use with a sport bike, the RFX4 EVO WP can also just as easily work with a powerful scooter or roadster, and thus, provides a reassuring alternative to short gloves, which are often worn with this type of machine. It offers that extra protection that's typical of Racing gloves, while also offering the comfort of more exclusive gloves. This weatherproof version is the one to choose as soon as the weather becomes threatening and is perfect for total peace of mind over long distances when it rains.

TECHNICAL FEATURES

01. Softshell fabric and synthetic leather topside construction
02. Supple full-grain goat leather palm
03. Ultra-tough stretch Nylon fourchettes between fingers
04. New design and Softshell thumb construction for optimal fineness and comfort
05. 5_Drytech™ breathable, weatherproof membrane, partially bonded
06. Nash palm reinforcement
07. ERGO PROTECH® metacarpal-knuckle protective, semi-soft honeycombed shell
08. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
09. TPR finger protection on index and middle fingers
10. Forearm protection from 3D TPR logo
11. Dual closure system with adjustment tab underneath a protective flap
12. Reflective fabric on pinky finger

STREET

FOR EVERYDAY RIDING
THAT'S FUN
AND DYNAMIC.

RSC EVO - Black / Fluo Red

The STREET collection is made for those who ride over short-to-medium distances in the city or outside of it, taking a fun and dynamic approach that needs protective gloves for maximum riding pleasure (and safety) at the controls. The street is their natural domain, but their field of play may be even greater...Just as comfortable in town and around its outer edges for quick trips as they are on side roads out to explore, and even on the track, for the high-performance fans among them.

Proud owners of roadsters, supermotos, or maxi-scooters will naturally gravitate toward the STREET Performance category, for gloves inspired by our competition styles, recognizable by their protective shells in sleek shapes and leather palms, which offer a superior level of safety that's sure to satisfy the most demanding technical riders. These gloves include the SF series, crowned with 14 Supermoto World Championship trophies, alongside the SF1, which could be described as a "short Racing glove" that's ideal for track riding, or the new-gen STUNT, an iconic style from the brand, designed to conquer the city...frequently emulated, but never equaled!

The STREET Sport segment brings together our textile or combined leather-and-textile gloves, whose protective shells with softer styling have become more subtle and discreet. These are for riders who take on the streets and roads in a multitude of ways (from motorcycles to scooters, and pocket bikes to big beasts, along with new electric mobility solutions...), ensuring their comfort and safety and attempting to keep a look that's both modern and sporty.

The STREET-WP segment includes gloves featuring a breathable, weatherproof membrane, commonly known as "mid-season" gloves, essential for worry-free rides as soon as the weather takes a turn for the worse (cold air, wind, moisture...).

P.S.: Take a look at the new, standalone URBAN collection (now distinct from the STREET collection), offering a more classic, fashion- and urban-oriented style, which you'll find in the next few pages.

SF1

AS GOOD ON TRACK AS ON THE STREET.
SUPERMOTO WORLD CHAMPION.

The SF1 can be considered the short racing glove par excellence. Perfect for sport, roadster, and supermoto riding. Made famous by its 14 Supermoto World Champion titles (8 at the hands of Thomas CHAREYRE), the SF1 has been totally redesigned in 2018, creating a brand-new style that's even more efficient. Designed for high-performance connoisseurs looking for a level of protection equivalent to that found on high-end racing gloves, without the bulk, it promises optimal protection of the ulna. With its palm that includes a leather digital reinforcement, it offers optimal grip under all circumstances. With full-grain leather, Kevlar® lining, Carbon reinforcements and a SuperFabric® patch on the palm, Stretch Kevlar® for comfort, the new SF1 is protective both on the inside and on the topside of the hand. Simply THE benchmark style in its category.

BLACK

XS-07 / S-08 / M-09 / L-10

12. CE KP2

SF2

COMPACT AND SPORTY.

A short sport glove, the SF2 takes up the superior SF1 concept and makes it even more multi-purpose and affordable. Perfect for sport bike, roadster, and supermoto riding. Lightweight and compact, its ventilated PU shells offer both protection and airflow. Built-in protective padding (underneath the leather) on outer knuckles. Perforated full-grain leather and stretch Cordura® construction with accordion-style gussets. Palm and thumb reinforcement in synthetic leather for better grip. Airprene® wristband for excellent hold. TPR and velcro closure. Short leather cuff with built-in memory-foam reinforcement underneath the leather at the forearm level. It provides top-level performance on any type of machine, and features a clearly sporty look that won't go unnoticed.

TECHNICAL FEATURES

SF3

THE ULTRA COMFORTABLE SHORT SPORTY GLOVE.

The SF3 is a short, urban sport glove that's all about extreme suppleness, effective ventilation, and top-level protection... all with a bold FIVE identity. On the topside: leather construction and ventilated PU Racing protective shell on the metacarpals. Ventilated leather on the index and middle fingers. Ventilated synthetic leather reinforcement on the thumb. The inside of the palm is in full-grain leather with synthetic leather reinforcements and a TPR shell. Several textile elements (3D Airmesh, 4-way Spandex™ on the thumb, ring finger, and little finger, Lycra® fourchettes, Airprene® cuff) make it exceptionally comfortable. The wide FIVE logo in soft TPR combines a sporty look with protection. This style is now an absolute must-have.

TECHNICAL FEATURES

- 01. Full-grain cowhide construction (topside) for durability and Airmesh fabric for ventilation / Full-grain goatskin (palm) for suppleness
- 02. Ventilated TPU metacarpal-knuckle protective shells
- 03. Protective TPR palm slider shell
- 04. Palm reinforcement in perforated synthetic leather
- 05. Airprene® cuff
- 06. 4-Way Spandex™ comfort panels (topside)

THE STUNT EVO 2

INSPIRED BY
HELMET TECHNOLOGY,
THE CONCEPT INVENTED BY FIVE
IS NOW REINVENTED.

Behind the creation of the STUNT by FIVE was a powerful idea: offering a short, sport-style glove for riding in urban & suburban zones that would be as protective as a track glove, and as lightweight and comfortable as a motocross glove. The STUNT succeeded in fulfilling this mission by adopting stretch elements in its topside construction and featuring sleekly designed protective shells and a leather palm that included a slider-type protective shell.

Though FIVE invented the STUNT, which helped make our brand a success throughout the world, this concept was then frequently copied...but never equaled. After the original STUNT came the STUNT EVO. Now, FIVE stays a step ahead once again with the third generation of this glove, the STUNT EVO2.

NEW EXCLUSIVE DESIGN AIRGO PROTECH SHELLS

Even more comfortable and protective than its predecessors, the STUNT EVO2 and its different iterations use the latest generation of AirGO PROTECH™ Performance ergonomic protective shells. Created by the Design and R&D departments at FIVE, their design is trademarked and protected. Their construction is now inspired by helmet technology, combining the benefits of a hard external shell with the advantages of soft internal elements that channel airflow.

Like the hard shell of a helmet, the rigid outer shell protects you from the impact of a fall. And the internal soft element absorbs and diffuses the energy of any impact, as the internal EPS liner on a helmet would do. Its honeycombed structure, which includes multiple openings, promotes optimal airflow (as would the holes and channels in a helmet's EPS inner liner).

On most gloves, foam of varying thickness is placed underneath the rigid plastic shells (even ventilated ones...), to make the contact zones between the glove and the hand more comfort-

able. What happens is that the foam tends to obstruct airflow.

No such thing is happening with the STUNT EVO2, because its ergonomic shape and the softness of the internal AirGO PROTECH™ element means that no comfort foam is needed. Only a thin lining allows the air to filter through, thus ensuring a comfortable junction between the skin and the soft protective element that molds to the natural contours of the hand.

The comparison with the world of helmets goes even further, because we've also produced 3 different shell sizes to cover the various (glove) sizes we offer. It's the same as for major helmet makers, except that we've doubled down by producing 3 sizes of right-hand shells and 3 sizes of left-hand shells... ;)

These shells are solid enough to earn a level 2 protective designation in and of themselves according to the CE standard, in other words, the highest level.

A 100% FULL-GRAIN LEATHER PALM FOR EXTREME SUPPLENESS

By choosing a 100% full-grain goat leather palm, renowned for its extreme suppleness, and a semi-soft, honeycombed ERGO PROTECH® palm slider, the STUNT EVO2 offers unparalleled feel on the handlebars. And thanks to its topside construction in stretch Twill Span, the second-skin effect offered by the STUNT EVO2 is simply stunning.

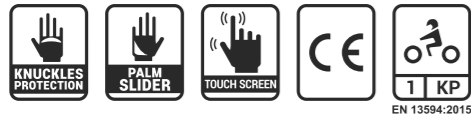

This glove's fit is impeccable, with its velcro tab that's integrated into the very structure of the wristband. And finally, the dual Touch Screen™ system allows you to handle all your device screens without taking off your glove. Located on the thumb and index finger, it makes using your smartphone's camera function or the zoom feature of your GPS so much easier. Offered in a range of bright, solid colors, such as red and neon yellow, or a camo version, the boldest (or most fashion-conscious) riders will proudly pair it with their everyday looks, like those brand-name sneakers that everyone notices.

STUNT EVO2, STUNT EVO2 LEATHER VENTED, and STUNT EVO2 AIRFLOW are the worthy heirs to the original STUNT...but now they're entering a whole new dimension!

STUNT EVO 2 LEATHER

THE VENTILATED,
ALL-LEATHER STUNT.

Here's a version of the STUNT EVO2 that gives pride of place to the natural, noble material that is leather. Because for some of us, there's nothing like leather for comfort and, especially, safety, the STUNT EVO2 LEATHER combines all the qualities of this traditional material for motorcycle equipment with a truly modern design, bringing to life a completely unique glove. And since we're dealing with a summertime glove, the leather is full-grain goat leather that's perforated to facilitate airflow and help perspiration evaporate. The rest of its components are exactly like those of the other STUNT EVO2 styles. It features the latest innovations from FIVE, both in terms of safety, with its AirGO PROTECH™ shells inspired by helmet technology (see previous pages), and in comfort and ease of use (Touch Screen™ on the thumb and index finger so you can handle your device screens, a velcro closure that's integrated into the structure of the wristband, etc.). We are clearly in the presence of a glove that features an innovative, unique design, all in leather, unparalleled in terms of style. The white version is, in our view, supremely elegant, likely to please the most distinguished riders. Pair it with a black outfit...without the slightest hesitation.

STUNT EVO 2

THE STUNT, ORIGINAL VERSION.

This is clearly the most common, new-gen iteration of the STUNT concept invented by FIVE. Its topside construction in tough stretch Twill Span fabric contributes greatly to the exceptional comfort of this iconic style. It features exceptional protection, given the second-skin feel it offers, with its AirGO PROTECH™ shells inspired by helmet technology (see previous pages), featuring a particularly innovative design. Its 100% full-grain goat leather palm, which is both supple and durable, feels so smooth and soft to the touch...And yet, it offers excellent grip on the controls and hosts a leather reinforcement lined with an ERGO PROTECH® semi-soft, honeycombed protective shell that offers a reassuring feeling of safety, without hindering your movements in any way. With its signature look, the STUNT EVO2 offers its rider a certain kind of status: that of an avant-garde design aficionado, even offering the feeling of being truly on the cutting edge, even ahead of the curve.

TECHNICAL FEATURES

01. Twill Span stretch topside construction
02. Full-grain goat leather palm
03. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
04. ERGO PROTECH® honeycombed palm slider
05. TPR finger protection with air intake vent
06. Softshell thumb construction for optimal finesse and comfort
07. Ultra-tough stretch Nylon fourchettes between the fingers

STUNT EVO 2 AIRFLOW

THE STUNT IN A VENTILATED VERSION.

This is the version of the STUNT EVO2 to use when the mercury starts rising. Its topside construction in ventilated 3D Air Mesh fabric and its perforated full-grain goat leather palm allow for optimal airflow and help perspiration evaporate, since it tends to accumulate when you ride harder than usual. Despite its highly ventilated qualities, the STUNT EVO2 Airflow still offers excellent protection with its AirGO PROTECH™ shells inspired by helmet technology (see previous pages), and their particularly innovative design. Its palm hosts a leather reinforcement lined with an ERGO PROTECH® semi-soft, honeycombed protective shell. You clearly choose the STUNT EVO2 for its avant-garde, even futuristic design, but also, and especially, because there's nothing better for taking the controls of a roadster when the city is suffocating in the heat.

TECHNICAL FEATURES

01. Air Mesh honeycombed topside construction
02. Full-grain goat leather palm
03. AirGO PROTECH™ ventilated metacarpal-knuckle protector
04. ERGO PROTECH® honeycombed palm slider
05. TPR finger protection with air intake vent
06. Softshell thumb construction for optimal finesse and comfort
07. Ultra-tough stretch Nylon fourchettes between the fingers
08. Ergonomic, fused neoprene wristband with integrated velcro closure

TRICKS

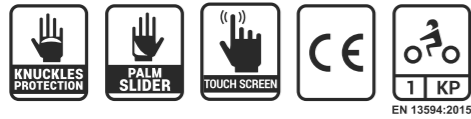

AIRGO PROTECH PERFORMANCE TECHNOLOGY FOR EVERYONE!

TRICKS can be described as an affordable modern glove with an energized aesthetic and protective qualities worthy of more high-end gloves. It includes the new generation of AirGO PROTECH™ Performance shells made up of a rigid external structure and softer honeycombed elements that channel the air into the glove and absorb the energy from any possible impact. Its construction is inspired by helmet technology...These shells are solid enough to earn a level 2 protective designation in and of themselves according to the CE standard, in other words, the highest level. The topside construction in durable stretch Twill Span fabric ensures impeccable comfort and support. The palm in Nash synthetic leather offers excellent grip, and you'll also be protected in case of a fall, with the inclusion of a soft-TPR ERGO PROTECH® shell that's ultra-comfortable at the controls. The TRICKS will be especially appealing to our vegan friends since it contains no elements of animal origin in its composition. Featuring the Touch Screen™ system for handling electronic devices, a Pull'N'Ride pull tab, and a velcro adjustment tab, TRICKS has more than one trick up its sleeve to become the new benchmark glove for its segment. Starting with its superior level of protection, a rare commodity at a price like this.

TECHNICAL FEATURES

01. Twill Span stretch fabric on topside
02. Nash synthetic leather palm
03. Ultra-tough stretch Nylon fourchettes between fingers
04. Thumb in 4-Way Spandex™ for optimal comfort and suppleness
05. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. Protective reinforcements in 3 mm-thick foam underneath leather on ring, middle, and pinky fingers
08. Velcro tab closure system with Lycra® comfort gusset
09. Silicone print on index finger for better grip

RS1

THE MOST ADVANCED RS STREET GLOVE.

The STREET SPORT collection is made for riders who want to combine comfort with a sporty feel for their everyday rides in the city and beyond. This is perfectly reflected in the RS range, with this new, ultra-innovative style leading the pack, the RS1. Like its cousin, the STUNT EVO2, the RS1 also uses helmet-inspired technology, which went into the making of its AirGO PROTECH™ Sport metacarpal-knuckle protective shell.

This glove offers softer lines matching the “sporty comfort” spirit of the RS range while highlighting the dynamic (you could even say “aero” dynamic) character of this style. The aesthetic approach may be different, but the philosophy remains the same: a hard outer shell to withstand impacts, and a soft inner element to absorb and distribute the energy of the impact, with a honeycombed structure that allows for perfect ventilation. This is all optimized using an additional vent that sends the air toward the inside of the glove. Inspired by air ducts used on Formula 1 or MotoGP brake systems, this is a signature element of the RS1 and is sure to be alluring to fans of design and aerodynamics. This soft, ergonomic internal element means we don't have to use comfort foam underneath the shells (which would obstruct airflow), as you'd find in most gloves on the market. These new shells made of 3 layered elements, the result of research by our R&D department, are making their debut exclusively within the RS1. They promise optimal safety since they cover the main joint and metacarpals. The RS1's construction cleverly combines perforated full-grain goat leather on the zones that are most exposed or prone to heavy wear, and Spandex, a durable stretch fiber, on the area that requires more flexibility. The goal here is to offer an ideal balance between comfort and protection, along with a first-rate sensation at the controls. The 100% ultra-supple goat leather palm hosts an ERGO PROTECH® semi-soft honeycombed slider, to protect the hypothenar without hindering your grip on the handlebars. The grooved neoprene outer surface of the wrist, the PullN'Ride™ adjustment tab, and the TPR + Velcro flap create a perfect fit and optimal support for the glove. The RS1 also features the Touch Screen™ system on the index finger and thumb, so you can use your GPS and smartphone with ease without taking your glove off, including for the zoom and camera functions.

Comfort, safety, functionality, and ultra-innovative design...the RS1 really does tick all the boxes, but watch out: it's for the most demanding riders, first and foremost. You decide if you fall into that category...

RSC EVO

FOR FANS OF MODERN,
HIGH-PERFORMANCE MATERIALS.

Here we present THE new product in the RS family, which features carbon elements. The RSC EVO will win over design aficionados and fans of technical materials. It aims to equip everyday riders of roadsters, sporty scooters, and any other machine that you love riding in an urban or suburban environment. Its palm is made of a supple, full grain goat leather. Its new one-piece ERGO PROTECH® shell comes in real carbon. It is the centerpiece of this truly alluring glove. Complete with an ERGO PROTECH® palm slider in soft TPR, the protection it offers is nothing less than optimal. The index and middle fingers are made of supple Softshell fabric, (perforated) for greater comfort and comfortable grip at the controls, and it's perforated to reveal the colorful internal lining and promote ventilation. Its index finger and thumb feature our Touch Screen™ system, which allows for easy use of smartphone screens, so essential for urban riding.

TECHNICAL FEATURES

01. Synthetic leather and high-resistance nylon topside
02. Supple full-grain goat leather palm
03. Embossed Neoprene™ wristband for enhanced comfort and fit
04. Index and middle finger in Softshell fabric, (perforated) for greater comfort
05. Foam rubber hypothenar reinforcement under leather
06. Carbon ERGO PROTECH® one-piece metacarpal-knuckle protective shell
07. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
08. Finger protection from foam pad and TPR air intake
09. Ultra-tough stretch Nylon fourchettes between the fingers
10. Closure system with TPR + Velcro flap with Lycra® comfort gusset and pull-tab
11. Hi-Res Grip™ palm reinforcement for optimal grip
12. Touch Screen system™ on index finger and thumb

RS2 EVO

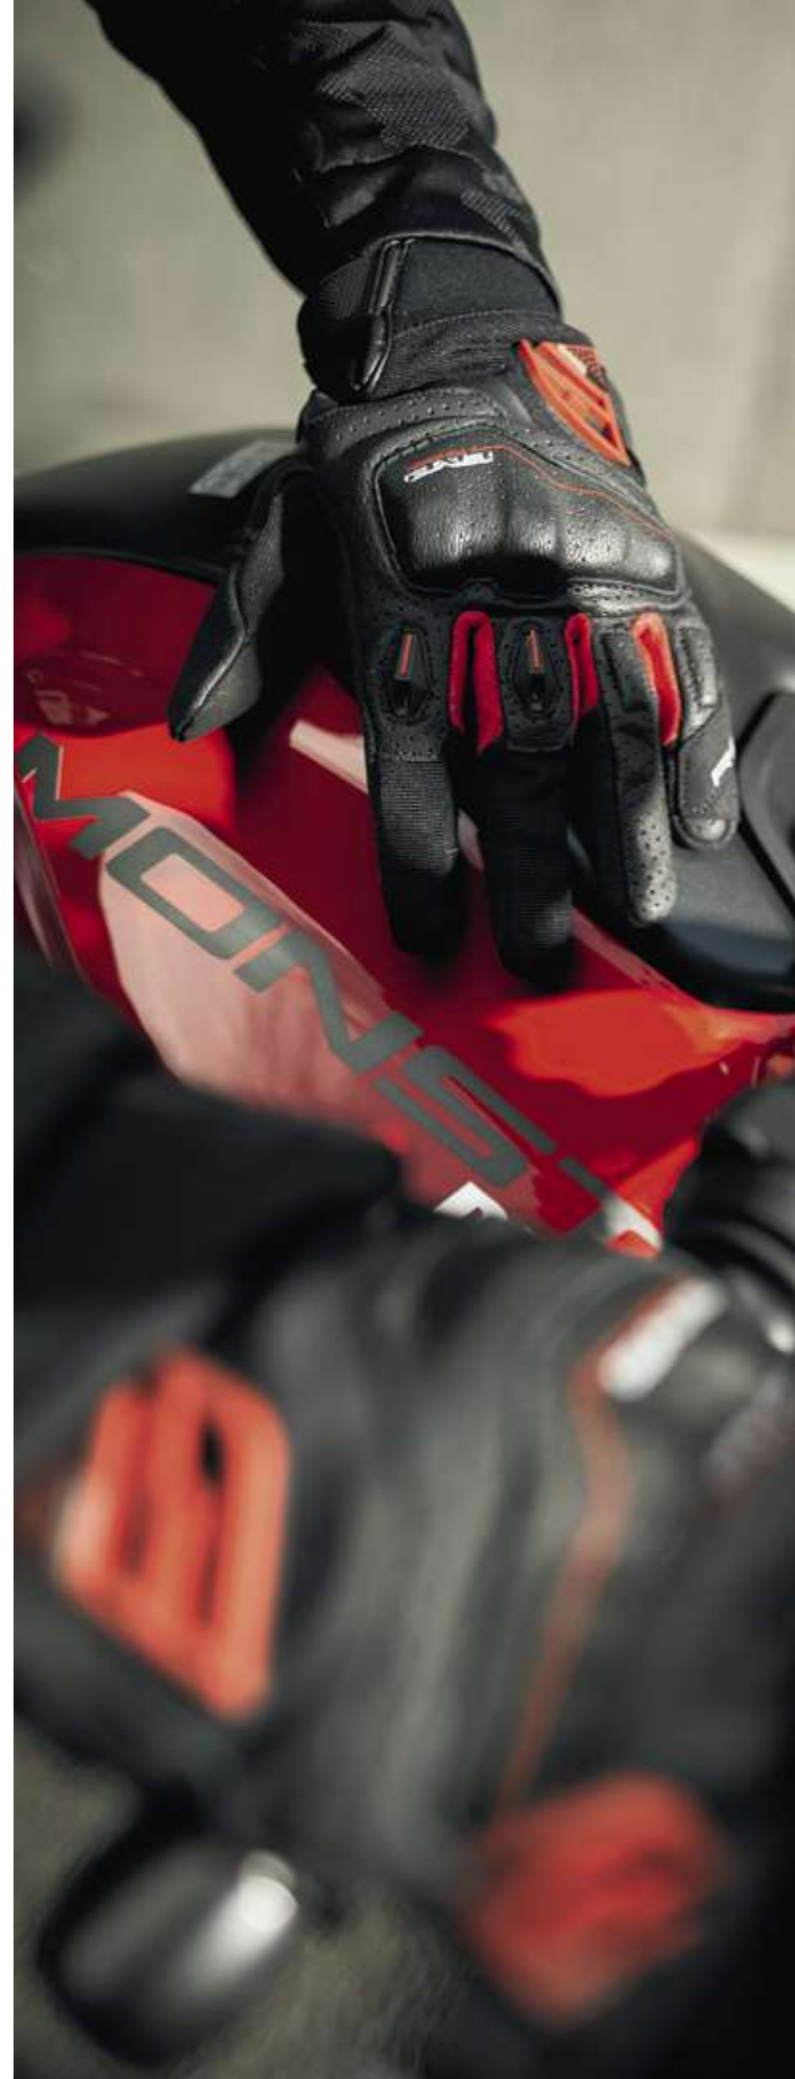

THE SAME, ONLY BETTER.

With the RS2, FIVE made its expertise available to all, offering an enjoyable everyday glove for all types of two-wheelers, from motorcycles to scooters. A top seller and 2017 winner of the Top Quality Prize from influential Moto Magazine in the summer glove category, this glove got a revamp in 2021. It'll keep its best features, but will feature an updated design, which will include a brand-new ERGO PROTECH® one-piece shell. And it'll also be even more practical, with new features such as the Touch Screen™ system so you can handle electronic devices with your gloves on. Its goat-leather topside, selected for suppleness and perforated for better ventilation, includes a 4-Way Spandex™ comfort zone, for optimal riding pleasure. The wrist zone will come in Neoprene™, for excellent support that won't slow you down. The RS2's level of ventilation will be just as efficient as ever, and its "second-skin" comfort, perfect for everyday wear, are back for you to enjoy. Even more attractive, even better equipped...the new RS2 is already setting the new standard in its category.

TECHNICAL FEATURES

01. (Topside) Full-grain goat leather construction for suppleness, perforated for ventilation / 4-Way Spandex™ / Neoprene™
02. (Palm) Synthetic leather with goat-leather reinforcement on the hypothenar
03. ERGO PROTECH® one-piece metacarpo-phalangeal PVC protective shell underneath the leather
04. FIVE protective logos in TPR on the metacarpals
05. Mini-protective shells in soft TPR on the index and middle fingers
06. Hypothenar protective shell (palm slider) in TPR
07. Protective reinforcements in 3 mm foam underneath the leather on the ring and little fingers
08. Leather accordion comfort gussets on the thumbs
09. Fourchettes (finger contours) in stretch Nylon
10. Neoprene™ wristband for enhanced comfort
11. TPR + velcro tab closure system and Lycra® gusset
12. Pull'N'Ride leather pull tab
13. Touch Screen™ system for handling electronic devices, on the index finger

RS3 EVO

THE MULTIPURPOSE URBAN GLOVE.

Totally redesigned in 2022 the RS3 EVO is meant to replace one of the most popular FIVE gloves, the RS3. Made for multipurpose urban use and designed for riders looking for a short, functional, comfortable, and affordable glove that offers a reasonable level of protection, the RS3 EVO is a basic you just can't live without, whether as your go-to glove or as a spare for a passenger. It features the very latest FIVE ERGO PROTECH® ergonomic protective shells for greater comfort and effectiveness, and its 4-Way Spandex™ topside construction gives it both excellent fit and major flexibility. Easy to slip on and take off, it's perfect for riders zipping all over town throughout the course of a day. It will be your faithful companion on your everyday urban rides at the controls of any type of machine. Could the RS3 EVO be setting the new standard in its category? All you have to do is try it, and you'll know it's true.

TECHNICAL FEATURES

01. 4-Way Spandex™ construction (topside) for flexibility / Synthetic leather (palm) for durability
02. One-piece FIVE ERGO PROTECH® TPR metacarpo-phalangeal protective shells under fabric
03. TPR hypothenar protective shell (palm slider)
04. One Way Stretch™ fourchettes for perfect fit
05. Neoprene™ wristband for fit and comfort
06. 3D mesh inserts over the wrist for better ventilation
07. Textured 3D logos and TPR knuckle protective elements
08. Closure system featuring a velcro tab and Pull'N'Ride™ pull tab
09. Touch Screen™ system (index finger) for handling touchscreen devices
10. Vegan Friendly

RS3 EVO AIRFLOW

THE VENTILATED MULTIPURPOSE URBAN GLOVE.

Totally redesigned in 2022, the RS3 EVO is meant to replace one of the most popular FIVE gloves, the RS3. Here we have it in its AIRFLOW version that's ventilated, designed for urban riding in summertime. It features the very latest FIVE ERGO PROTECH® ergonomic protective shell for greater comfort and effectiveness, and its topside construction in honeycombed mesh fabric helps offer perfect airflow. Easy to slip on and take off, it's perfect for riders zipping all over town throughout the course of a day. It will be your faithful companion on your everyday urban rides at the controls of any type of machine, as soon as temperatures rise, offering you a cooling stream of air.

TECHNICAL FEATURES

01. Honeycombed mesh fabric construction (topside) for ventilation / Synthetic leather (palm) for durability
02. One-piece FIVE ERGO PROTECH® TPR metacarpo-phalangeal protective shells under fabric
03. TPR hypothenar protective shell (palm slider)
04. One Way Stretch™ fourchettes for perfect fit
05. Airprene® wristband for fit, comfort, and the elimination of perspiration
06. 3D mesh fabric inserts over the wrist for better ventilation
07. Textured 3D logos and TPR knuckle protective elements
08. Closure system featuring a velcro tab and Pull'N'Ride™ pull tab

GLOBE EVO

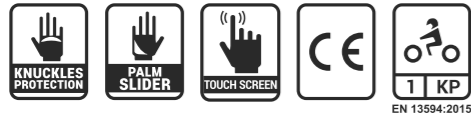

THE AFFORDABLE MULTIPURPOSE URBAN GLOVE.

The Globe Evo represents a significant evolution for the Globe, our style focused on meeting the essential needs of urban motorcycle and scooter riders looking for a super-affordable and practical glove. The Globe has been a top seller worldwide and has quickly become a must-have basic. The Globe Evo takes up the straightforward qualities of its predecessor, upgrading it with the latest generation of ERGO PROTECH® ergonomic protective shells and a new fit that makes it even more comfortable. It features just what you need to ride safely and comfortably in the city. With its updated construction and dynamic look, there's no doubt that the Globe Evo will set a new benchmark in the entry-level segment. It offers the Touch Screen™ system on the index finger, so you can handle device screens, and its “no-leather” composition is sure to delight our vegan friends. The Globe Evo is THE ultimate affordable, versatile glove. Choose it as a main pair or an extra one for your passenger (it comes in both men's and women's versions).

X-RIDER^{WP}

THE SHORT,
WEATHERPROOF GLOVE
FOR GLOBETROTTERS
AND SPORT RIDERS.

Revamped in 2021, the last generation of X-Rider is proving even more versatile than its predecessor. Though it keeps gaining fans among globe trotters, who consider it the perfect glove to take them to the ends of the earth, the latest X-Rider will also be ideal for more sporty use (as demonstrated by the accordion tie between the ring and little fingers, a racing-glove detail), or even for urban riding; and it promises to excellently fulfill its role at the controls of a roadster. Weatherproof and breathable, with its new 5-DRYTECH™ membrane, technical, mid-length, so it's not too bulky, focused on a superb comfort / protection / durability ratio, the X-Rider commands respect. Tough, and characterized by its heat-molded cuff protection and its new visible metacarpal-phalangeal ERGO PROTECH® PVC carbon style shell, it retains an adventurous look. With its digital leather palm to maintain optimal grip, even in driving rain, the X-Rider is designed for those who ride everywhere, often, and in all kinds of weather.

BOXER EVO^{WP}

PROTECTS YOU FROM THE RAIN,
AND SO MUCH MORE...

Featuring a breathable, weatherproof 5_DryTech™ membrane, the BOXER EVO WP is made for urban and suburban riders who want a short glove with quality materials to face bad weather. Whereas its predecessor didn't feature this, the BOXER EVO WP now hosts lightweight thermal insulation (PRIMALOFT® Silver 80 g) to add just that bit of warmth for those chilly mid-season mornings or evenings. Its topside construction in water-repellent Softshell fabric, with a bit of stretch for comfort, paired with a full-grain goat leather palm, gives the BOXER EVO WP its high-end fit and comfort. Alongside the protection it provides from stormy weather, it also protects its rider from the risks associated with a fall, due to its ERGO PROTECH® semi-soft protective shells underneath the fabric, its ERGO PROTECH® palm slider in soft TPR, which is so comfortable at the controls that you'll forget you're wearing it, its protective cuff, and foam reinforcement on the thumb and fingers. The Touch Screen™ system so you can use your smartphone or GPS without taking off your glove completes it all, allowing you to face the city in the rain with total peace of mind.

TECHNICAL FEATURES

01. Softshell fabric topside for greater comfort
02. Supple full-grain goat leather palm
03. 5_Drytech™ breathable, weatherproof membrane, partially bonded
04. PrimaLoft® Silver 80 g hydrophobic thermal insulation on topside
05. Semi-soft ERGO PROTECH® metacarpal-knuckle protective shell
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. Forearm protection from 5-mm foam rubber underneath the fabric
08. Velcro cuff closure
09. Reflective logos on topside
10. PU Grip Palm reinforcement
11. Touch Screen system™ on index finger and thumb

RS WP

THE SHORT, LIGHTWEIGHT, WEATHERPROOF MULTI-PURPOSE URBAN GLOVE.

RS WP takes on the role in our Urban range of a short, weatherproof glove that's versatile and practical. Featuring metacarpal protective shells discreetly inserted underneath waterproof fabric, a shell on the palm, and, especially, a weatherproof membrane, it protects its rider just as much from risks in case of a fall as it does from bad weather. The advantage of a short, lightweight glove for urban use is clear: it easily and discreetly blends into your overall look and its reduced bulk makes it truly practical to carry around. It can therefore be your everyday partner, just in case the weather is unreliable, tucked into your bag or at the bottom of a top case.

TECHNICAL FEATURES

01. Weatherproof fabric construction (topside) for weather resistance / Synthetic leather (palm) for durability
02. HIPORA® weatherproof internal membrane
03. Bemberg™ internal comfort lining
04. One-piece TPR Soft metacarpal-phalangeal and phalangeal protective shells under fabric
05. Hypothenar protective shell (palm slider) in TPR
06. Perforated synthetic leather palm reinforcement for improved grip
07. Neoprene™ cuff for adjustability, comfort, and weather resistance
08. Flap + velcro and synthetic leather pull-tab closure system
09. Touch Screen™ system (on index finger) for handling touchscreens without removing the glove

URBAN

URBAN RIDING
WITH ELEGANCE.

FLOW - Stripes Black / Beige

The URBAN collection is made for those who ride two-wheeled vehicles in urban or suburban settings and are looking for a certain elegance that also combines protection, practicality, and a pared-down aesthetic.

The styles that are part of this collection are meant to enhance your riding experience, focusing on natural materials such as full-grain leather, or taking maximum advantage of modern technical fibers. They're also protective, with ergonomic shells discreetly integrated into the structure of the glove and concealed beneath the leather or fabric, for resolutely urban flair.

The goal here is to make your gloves blend in with your everyday looks when heading out in the city, to the office, or to a meeting. These gloves come in muted shades such as black, grey, brown, or khaki...

They can be worn to pilot a scooter or a motorcycle, so long as your priorities are comfort, an enhanced ride, and, of course, style!

Though they may have a conventional look, these styles are infused with all of FIVE's expertise in terms of safety and perfect fit, as well as the latest innovations introduced by the brand for better riding (TouchScreen™, Pull'N'Ride™, etc).

The URBAN WP collection is comprised of gloves featuring a breathable, waterproof membrane, and, in some cases, thermal insulation, so you can run around town with peace of mind when the weather is rainy or cold...and always with total elegance.

SPORTCITY EVO

THE TOP LEATHER CITY GLOVE,
NOW EVEN BETTER.

The SportCity, designated in its time as the “Top city glove” by influential Moto Magazine, was already one of our most successful styles. The SportCity Evo is even more elegant, protective, and enjoyable to wear every day. It stands out as the ideal short leather glove for riding on basic or classic motorcycles or scooters. Its exceptional fit makes it the perfect companion for when you’re out on the town. Its clean, modern look, 100% full-grain perforated leather, and discreet FIVE embossed and flexible metal logo mean that it goes perfectly with any outfit, so harmoniously. It also represents a major leap forward in terms of protection, with the latest generation of ERGO PROTECH® protective shells concealed underneath the leather, for the topside shell, and a semi-soft, honeycombed “slider” on the palm, for unhindered grip on the handlebars. Its dual Touch Screen™ system on the index finger and thumb allows you to use all the features of your GPS or smartphone without having to take off your glove, something super-practical in the urban jungle. The leather on the SportCity Evo, which is both tough and supple, ensures durability and comfort... Once it’s subtly burnished and has taken on the contours of your hand, you simply won’t want to take it off. Available in men’s or women’s versions.

TECHNICAL FEATURES

01. Perforated full-grain goat leather topside construction
02. Full-grain goat leather palm
03. ERGO PROTECH® metacarpal-knuckle protector concealed underneath the leather
04. ERGO PROTECH® honeycombed semi-soft palm slider
05. Metal embossed, flexible FIVE logo badge
06. Velcro wrist closure

URBAN

THE LONG URBAN GLOVE.

A recent design from FIVE, made for urban use (as its name indicates), the Urban opts for a long, non-bulky cuff, offering its rider maximum protection and the option of wearing it over or under your jacket's sleeve. Compared to short gloves, the style of the Urban lends it a certain elegance that's clearly classic. You can feel safe, too, with its integrated one-piece PVC topside shell under the leather, and numerous protection elements. The perforated leather insets add visual appeal that's also practical, contributing to enhanced sweat evaporation. The accordion gusset on the wrist, coupled with a velcro adjustment tab, makes for easy on/off and perfect fit. And last, but not least, the Urban features the Touch Screen™ system that allows you to activate the touchscreen on a GPS or smartphone device. It's always practical not to have to take off your gloves to make a call or find your way in the urban jungle.

BLACK
XS-07 / S-08 / M-09 / L-10
XL-11 / 2XL-12 / 3XL-13

TECHNICAL FEATURES

01. Main construction in full-grain goatskin and perforated goatskin (topside and palm) for suppleness and ventilation
02. Long cuff that includes protective foam on the forearm
03. One-piece PVC metacarpal-phalangeal protection under leather (perforated for a great look)
04. Foam protective cushioning on the index, middle, ring, and little fingers
05. Comfort gussets for the index and middle fingers
06. Lycra® between the fingers for suppleness and air circulation
07. Synthetic leather palm reinforcement for grip
08. Synthetic leather reinforcement and TPR protective shell for the hypothenar
09. Simple closure featuring a synthetic leather and velcro tab
10. Long leather cuff with integrated foam forearm protection and stretch accordion zone
11. Touch Screen™ system (index finger) for handling device screens
12. CE KP1

URBAN AIRFLOW

THE LONG-CUFF URBAN GLOVE THAT KEEPS YOU COOL.

A new design from FIVE made for urban use (as the name says) in summertime, the Urban Airflow opts for a long, yet lightweight cuff that offers its rider maximum protection and the option to wear it either over or under your jacket's sleeve. Compared to short gloves, the style of the Urban Airflow gives it a certain elegance and a relatively classic look. A sense of security comes from its integrated PVC one-piece topside shell underneath the leather, as well as its multiple protective elements, but what stands out about this version is clearly the attention we've paid to its ventilation. This ventilated Urban Airflow version, when compared with the Urban style, has been obtained by including 3D mesh fabric in place of perforated leather inserts, and perforated leather in place of standard leather, thus allowing for optimal air circulation so sweat can evaporate. The accordion gusset on the wrist, coupled with a velcro adjustment tab, makes it easier to slip the glove on and adjust it. And lastly, the Urban Airflow features the Touch Screen™ system that lets you activate a GPS or smartphone touchscreen. It's super-practical not to have to take off your glove to make a call or find your way through the urban jungle.

BLACK
XS-07 / S-08 / M-09 / L-10

SPARK

THE CITY GLOVE
THAT MAKES SPARKS FLY.

A new product in the urban range, the SPARK is a first-rate choice for those looking for a comfortable, elegant glove that includes dynamic features inspired by sport-style gloves. Though it is clearly meant for urban use, it includes a honeycombed ERGO PROTECH® metacarpal protective shell, hidden underneath stretch fabric that is textured for stylish flair. Its full-grain leather palm hosts a soft slider shell that will protect its riders in case of a fall, without hindering their grip on the controls. Slipping on the glove is now easier with the addition of a Lycra® inset underneath the velcro adjustment tab. Equipped with the Touch Screen™ on the thumb and index finger, it allows you to zoom in on the screen using two fingers on your smartphone or tactile GPS. You can also easily match your SPARK to your everyday looks with its trendy colors: khaki, midnight blue, or black. Why not add all three to your wardrobe? It's enough to make the sparks fly each time you head out for a ride.

TECHNICAL FEATURES

01. Textured stretch polyester fabric on topside
02. Supple full-grain goat leather palm
03. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
04. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
05. Ultra-tough stretch Nylon fourchettes between the fingers
06. Foam protective reinforcements on ring and pinky fingers
07. Velcro tab closure system with Lycra® comfort gusset

FLOW

RIDE IN THE CITY, WITH STYLE.

When you have to ride a motorcycle or scooter in the city, you might as well do it in style. The FLOW seeks to be elegant, comfortable, and practical, for everyday wear. It's easy to slip on and off, due to the inviting shape of its wrist and its integrated adjustment tab. It's also protective, with its goat leather palm and honeycombed ERGO PROTECH® shell hidden underneath the tough and flexible stretch nylon that makes up its topside construction. The FLOW prioritizes suppleness, freedom of movement, and the smooth, sleek texture of its palm. This palm doesn't come with a shell but is effectively equipped with a large leather reinforcement lined with foam on the hypothenar, to ensure a level of abrasion resistance that could be your saving grace if you take a spill. Equipped with the Touch Screen™ system on the index finger, the FLOW allows you to use your smartphone to find your way or to keep in touch with your tribe. It's the perfect glove that's simple, tough, and affordable, to ride in the city with real elegance. Available in black for those who like an understated look, or in black-beige Stripes to show off your unique sense of style.

URBAN^{WP}

THE LONG URBAN GLOVE THAT'S... WEATHERPROOF.

A recent FIVE design made for urban use (as its name indicates), the Urban WP opts for a long, sleek cuff, to offer its rider maximum protection that can be worn either over or underneath your jacket's sleeve. Here we present its weatherproof version, featuring a 5_DRYTECH™ membrane that allows you to use it when it rains. Compared to short gloves, the Urban WP's style confers a certain elegance and classic look. You'll also feel truly safe, due to its topside one-piece PVC shell underneath the leather, along with its many other protective elements. The accordion gusset on the wristband, coupled with a velcro adjustment tab, makes it easy to slip on and adjust to your hand. And finally, the Urban WP features the Touch Screen™ system, which allows you to activate your GPS or smartphone screens. It's so practical not to have to take off your glove to make a call or find your way through the urban jungle.

TECHNICAL FEATURES

01. Main structure in goat leather (topside and palm), for suppleness
02. Long cuff that includes foam forearm protection
03. 5_DRYTECH™ weatherproof / breathable membrane
04. One-piece PVC metacarpo-phalangeal protective shell underneath the leather

MILANO EVO^{WP}

SIMPLE, UNDERSTATED, AND EFFICIENT.

The Milano, our weatherproof, breathable urban glove designed mainly for mid-season scooter riding, has been completely restyled in 2021. Fully updated, it still retains the characteristics that made its predecessor a real success. It features a protective shell concealed underneath nylon fabric and a leather palm, promising absolute protection. It also features a weatherproof, breathable 5_DRYTECH™ membrane, thus offering a layer of thermal insulation to protect its rider from the cold. Sleek and subtle, the new Milano Evo retains its fashionable look, making it the perfect companion for elegant occasions, worn underneath a raincoat.

TECHNICAL FEATURES

01. Synthetic fabric (topside) and full-grain goat-leather (palm side) construction
02. PVC metacarpo-phalangeal protective shells underneath the fabric
03. Internal 5_DRYTECH™ weatherproof, breathable membrane
04. Thermal-insulating foam
05. Memory-foam hypothenar protection underneath the leather

WFX METRO WP

THE ALL-LEATHER,
ULTRA-INSULATED WINTER GLOVE.

In the guise of a subtle all-leather winter glove for the city, the WFX METRO WP introduces an innovative concept in terms of construction and thermal insulation. Most winter gloves have been made the same way for ages...To put it simply: Thick thermal insulation over the top of the hand, and a finer layer on the palm, all the way up to between the fingers. And here was the weak spot of this traditional construction. The cold ends up getting inside through the fourchettes (which is what the area between the fingers is called). FIVE has reinvented the fundamentals of thermal insulation using a new type of construction called THERMO+™, offering up to 20% greater heat retention, based on PRIMALOFT® insulation, the very best in the field. The concept is quite simple: thick insulation on the topside extends down between the fingers, whereas the thinner insulation is limited to the (flat) base of the palm and fingers. This implies reconsidering all the other elements in the glove, such as the external structure or the weather-proof membrane, in order to maintain perfect suppleness overall and a firm grip on the controls. It's when you ride in the cold that you understand the point of this Thermo+™ construction. The thicker, denser insulation in the fourchettes constitutes a much more effective thermal barrier and helps keep the hand's natural heat within the glove for longer. Beyond this innovation, the WFX METRO WP has a rare elegance and outstanding perceived quality, due to its all-over full-grain leather construction. Its all-leather, large adjustment tab, worthy of the finest leather goods, contributes to this positive perception. It features all the elements that are common to most FIVE WP gloves, with its breathable, weatherproof 5_Drytech™ membrane, ERGO PROTECH® shells, and its Touch Screen™ and Clear Vision Pad™ systems. The WFX METRO WP will enchant aficionados of fine materials like leather, taking care to keep your hands warm and dry when temperatures are near freezing.

TECHNICAL FEATURES

01. Supple full-grain goat leather topside
02. Supple full-grain goat leather palm
03. 5_Drytech™ breathable, weatherproof membrane, partially bonded
04. Innovative FIVE Thermo+ Insulation offering 20% more insulation, includes PrimaLoft® Silver 170 g on topside and 60 g Gold Grip control in palm
05. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. Velcro cuff closure
08. Reflective fabric on pinky finger
09. Touch Screen system™ on index finger and thumb
10. Clear Vision Pad™ on the left hand for wiping helmet visor or goggles

WFX DISTRICT WP

A COCOON AGAINST THE COLD.

Designed for exploring the city in the winter on an everyday basis with nice, warm hands, and wearable underneath your jacket(s), the WFX DISTRICT WP introduces an innovative concept in terms of construction and thermal insulation. Most winter gloves have been made the same way for ages...To put it simply: Thick thermal insulation over the top of the hand, and a finer layer on the palm, all the way up to between the fingers. And here was the weak spot of this traditional construction. The cold ends up getting inside through the fourchettes (which is what the area between the fingers is called). FIVE has reinvented the fundamentals of thermal insulation using a new type of construction called THERMO+™, offering up to 20% greater heat retention, based on PRIMALOFT® insulation, the very best in the field. The concept is quite simple: thick insulation on the topside extends down between the fingers, whereas the thinner insulation is limited to the (flat) base of the palm and fingers. This implies reconsidering all the other elements in the glove, such as the external structure or the weatherproof membrane, in order to maintain perfect suppleness overall and a firm grip on the controls. It's when you ride in the cold that you understand the point of this Thermo+™ construction. The thicker, denser insulation in the fourchettes constitutes a much more effective thermal barrier and helps keep the hand's natural heat within the glove for longer. Beyond this innovation, the WFX DISTRICT WP stands out due to its composition that combines a supple, full-grain leather palm, topside construction in water-repellent Softshell fabric, and a ribbed cuff that keeps the warmth inside the glove. Supple and comfortable, it features all the elements that are common to FIVE gloves, with its breathable, weatherproof 5_Drytech™ membrane, ERGO PROTECH® shells, and its Touch Screen™ and Clear Vision Pad™ systems. The WFX DISTRICT WP is made for riders who, persuaded by the ribbed cuff concept (which is well-proven for insulation from the cold), are looking for a discreet, high-performance glove to face the city and its dangers, which are heightened in the winter.

TECHNICAL FEATURES

01. Softshell fabric topside for greater comfort
02. Supple full-grain goat leather palm
03. Ribbed cuff
04. 5_Drytech™ breathable, weatherproof membrane, partially bonded
05. Innovative FIVE Thermo+ Insulation offering 20% more insulation, includes PrimaLoft® Silver 170 g on topside and 60 g Gold Grip control in palm
06. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
07. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
08. Velcro wrist closure with FIVE logo buckle
09. Reflective fabric on pinky finger

CUSTOM

CUSTOM IS ABOUT
LOVING THINGS
MADE JUST FOR YOU.

Custom culture is the idea of finding that special something made just for you. So, it was logical that FIVE would create a collection of gloves aimed at enthusiasts of custom, vintage and new-retro motorcycles, depending on what you prefer to call it.

This is a range where you'll find the glove that matches the style of the motorbike. Beautiful design, high-quality, authentic materials, mainly full-grain leather, chosen for its extreme flexibility and durability, all coupled with an excellent finish, are the hallmarks of the Custom collection. As glove specialists, FIVE offers lots more than normal custom gloves: it has poured all its expertise in terms of fit, comfort and safety into this Custom range.

MONTANA

AN AUTHENTIC LOOK
FOR RIDING YOUR CUSTOM MACHINE
IN COLD WEATHER.

Because, as a real Custom aficionado, you enjoy taking your machine for a ride when it's cold outside, as conditions allow, in other words, as soon as the sun comes out (which makes it a lot more enjoyable...), it's better to be ready with the right equipment. FIVE has thought of everyone who wants to ride in comfort despite the cold, and in style, at the controls of a motorcycle full of personality, and we've been inspired by 1930s flight jackets, from a time when aviators needed to spend hours in a freezing cockpit, wearing warm, durable garments.

The Montana will delight you, first with its quality, and the suppleness and toughness of its full-grain cowhide leather, specially selected and coated for a truly authentic look that covers the back of the hand and the palm. But the most impressive thing here is the feeling of warmth and comfort when you wear it, thanks to its synthetic sheepskin lining around the wrist, and the polar-fleece internal lining throughout the hand, all the way down to the fingertips. There are two ways to wear the Montana: with the cuff rolled up or rolled down. The rolled-up position, which highlights the sheepskin-style lining, is secured with two snaps. And you simply need to fold the cuff down for it to cover or slip into your jacket, as you wish...or in case there's an unexpected rain shower. The Montana does not feature a weatherproof membrane (this isn't its intended purpose), but the robust coated leather will, most often, suffice to protect you from a short, light rain shower, just as a real aviator jacket would. We've paid close attention to the bold vintage style of this piece, as you can see in the embossed pattern that adorns the large nubuck palm reinforcement, synonymous with durability and extra protection in case you make contact with the ground. And we haven't forgotten the back of the hand: the small gusset on the wrist, and the three impressive topstitches, accentuate its resolute character. In terms of safety, again, the wrist closure promises to hold the glove perfectly in place if you take a spill. Whether you feel like Charles Lindbergh during his first crossing over the Atlantic aboard his plane, the Spirit of St. Louis, or you're just a Custom fan who likes to cruise in the fresh air, there's no doubt that you'll appreciate the qualities of the Montana. If Lindbergh were still flying today, he'd surely consider the Touch Screen™ system on the index finger and thumb, which is super-practical for handling a GPS indicator without taking off your gloves, an ingenious invention...

The Montana offers its rider a look that's both unique and authentic, along with cozy comfort, much appreciated when you're behind the wheel of a classic machine and it's cold (and dry) outside.

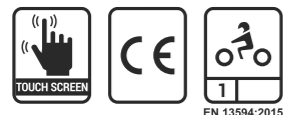

TECHNICAL FEATURES

01. Tough, coated cowhide leather construction (topside and palm)
02. Synthetic sheepskin lining and 5_WARMTECH™ thermal insulation on the topside
03. Nubuck palm reinforcement
04. Adjustable cuff length with snaps
05. Embossed graphic ornament on the palm

CALIFORNIA

FOR MEN OF CHARACTER.

This all-leather glove imposes its presence with its cross-stitched detail and quilted look that we usually find on the seats of the most beautiful custom machines. Its wide leather adjustment tab that closes on the top of the cuff breaks with tradition and reinforces the rather manly look of the California. The leather palm reinforcement that extends into an easy on/off pull tab demonstrates our desire to combine beauty with functionality. This is a strong glove, for strong men (with strong bikes).

BROWN

BLACK

ARIZONA

VINTAGE CULTURE... REINFORCED PROTECTION.

The ARIZONA is a 100% full-grain leather glove with a distinct personality, beautifully combining quilted and perforated leathers, and allying design with protection. It features thick leather reinforcements over-stitched on the edge of the hand, which are not only decorative, but also aimed at protecting the rider's hand in the event of a fall. Closure via a leather tab with a press-stud embossed with FIVE. With its unique character, superb details, and quality materials, it is the very living essence of vintage culture.

TEXAS EVO

BET ON 5, AGAIN.

The Texas has always gotten people talking... Like a misunderstood star, it was adored by the public and the press, but “industry professionals” set it aside a bit too quickly because they didn’t believe in it, contributing to its disappearance. Due to constant popular demand, we are now proud to announce the return of this style to the spotlight. And so, we present the Texas Evo, an evolved version that’s affordable, sure to please just about everyone, and be just as alluring as it ever was. Though it may look like a “golfer”, it’s actually inspired by the golden age of motorsports, when a few Hollywood stars took part in competitive races behind the wheel (or handlebars) of racing machines. In 100% ultra-supple cowhide leather with external stitching, we choose it for its lightweight comfort, its 5 patch that reminds us of a numberplate, its vintage look, and its irresistible colors. Despite its vintage look, it manages to keep up with the times, to the point of featuring the Touch Screen™ system on the index finger AND thumb, so you can make optimal use of your smartphone’s camera function. Nothing could be better for stylish, trend-conscious riders. So if you’re ready to play, bet on number 5. It’s sure to come up a winner.

BLUE / FLUO RED

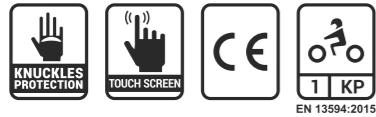

OKLAHOMA

THE UNIVERSAL CUSTOM GLOVE.

The current "Custom craze" is being fed by several different styles (the Café Racer, Bobber, Vintage, and Neo-Retro trends, among others), which end up blending to create something truly interesting. And so, we wanted to offer a glove that everyone would like, whatever your favorite influence(s) may be. It's up to you to write your own Oklahoma story...Café-racer fans who ride bikes inspired by '70s competitive motorcycles will appreciate the touch of racing-glove style: external stitching, a protective flap over the adjustment tab, protective cushioning over the knuckles. Those who favor Custom vintage machines, like a Harley with a rusty tank plate, are sure to like the large, visible topstitching around the piped edges of its short cuff, or its internal lining adorned with rather inspired custom graphics. For those Neo-Retro lovers who are used to combining modern comforts with all the charm of times past, they will undoubtedly notice the smooth, luxurious look of the cowhide, paired with the rough texture of nubuck, giving the Oklahoma its classic appeal. This glove stands at the crossroads of different trends, and, if there's one aspect that everyone can agree on, it's the level of protection it offers. So...is the Oklahoma authentic, protective, and truly universal? Definitely!

TECHNICAL FEATURES

01. Full-grain cowhide construction (palm and topside), for durability
02. Nubuck palm reinforcement
03. One-piece PVC metacarpo-phalangeal protective shell underneath the nubuck
04. External stitching on the fingers, for optimal fit
05. Protective foam knuckle reinforcements concealed underneath the leather
06. Comfort gussets on the wrist band
07. FIVE Custom logo embossed on the leather
08. Internal cuff lining enhanced with custom graphics
09. Decorative top-stitching around the piped cuff edges
10. Leather and velcro closure system and adjustment tab underneath a protective flap
11. "Feel your ride" inscription concealed underneath the protective flap
12. Touch Screen™ system on the index finger, for handling electronic devices

KANSAS

OUR MOST PROTECTIVE CUSTOM GLOVE.

The Kansas stands out as our most protective custom glove. Featuring a one-piece metacarpal protective shell inserted underneath the leather, and several reinforcements on exposed zones, it offers extra comfort and exceptional adjustability and touch sensitivity on the controls, due to, among other elements, its outer stitching. Its countless details, comfort gussets and top-stitching, double closure with a zipper and leather and velcro flap, or its incredible level of finishing, make it a piece that leather lovers who want to look good will appreciate, without neglecting their safety. The Kansas marvellously combines classic style with a modern touch, since its index finger hosts the Touch Screen™ system that allows you to handle touchscreens without removing your glove.

TECHNICAL FEATURES

01. Total full-grain goatskin construction for suppleness (palm and topside), perforated for ventilation (topside)
02. One-piece PVC metacarpal-knuckle protective shell underneath the leather
03. Outer stitching on the fingers for optimal fit
04. Closure and adjustment system with zipper + velcro tab and on/off pull tab
05. Leather accordion comfort panels on fingers and thumb
06. Accordion leather + Elastic cuff for greater comfort
07. Hypothenar muscle protection with full-grain cowhide reinforcement panel and memory foam featuring embossed logo
08. Touch Screen™ system on index finger for handling touchscreens.

MUSTANG EVO

THE EVOLUTION OF A BESTSELLER.

The Mustang used to represent the “little Custom leather glove that everyone likes”, with its minimalist aesthetic, ultra-compact size, and delicate comfort. Allow us to introduce the Mustang Evo, an optimized and updated version of this iconic style. We’ve totally redesigned it, using our new, exclusive palm-to-thumb construction, for a fit that’s even more precise and comfortable. It’s made in 100% full-grain goat leather, renowned for its suppleness and perforated for better airflow and sweat evaporation. The Mustang Evo has opted for a subtle look, with its protective shell hidden underneath the leather and its large insert adorned with a FIVE Custom logo embossed on the palm. Its closure system is now placed on the inside of the wrist, which makes for easier handling with a more intuitive feel and a tab that’s less likely to open unexpectedly. Safety has been reinforced by subtly lengthening the glove for better wrist coverage, without changing the “ultra-short” character that made the Mustang so successful. It’s been a logical, practical evolution, with the addition of the Touch Screen™ system that allows you to handle device touchscreens without taking off your gloves. The Mustang Evo is sure to go perfectly with any Custom or neo-retro machine or even with more conventional motorcycles, since it’s so alluring, with its universal, timeless style. Available in Men’s or Women’s versions.

COLORADO

BACK TO BASICS.

When it comes to all things Custom, we often only remember the essentials, the basics of motorcycling: a chassis, an engine, the controls, and two wheels are all we need to be happy. The same thing applies to the Colorado. In other words, when less truly becomes more... Less panels, less stitching, less protective elements, for greater comfort and control sensitivity. Inspired by a minimalistic approach that's straight out of Japan, the Colorado reminds us of the automotive gloves of the 1960s. The suppleness of full-grain leather invites you to ride your bike subtly and skilfully. Its second-skin smoothness, enhanced by its distinctive construction (with middle and ring fingers separate from the rest of the structure, and one long outer seam around the fingers), will make you feel like you're wearing nothing at all. But the sturdiness of the cowhide will save your hands if you happen to take a spill. Its adjustment tab adorned with a metallic grommet positioned over the wristband adds to the comfort and sleek look of the Colorado. This is a glove you'll choose more for its feeling of freedom than for the protection it provides, there no doubt about it.

TECHNICAL FEATURES

01. Full-grain cowhide construction (topside and palm), for durability
02. Quilted foam hypothenar reinforcement underneath the leather on the palm side
03. Distinctive construction, with the middle and ring fingers separate from the rest of its main structure
04. One long outer seam on the fingers and thumb, for optimal fit
05. Multiple leather perforations on the top of the fingers, for style and ventilation
06. Metallic grommet and FIVE Custom embroidered label
07. Comfort gussets on the inside of the wrist
08. Topside closure and adjustment system, featuring a leather and velcro tab

SCRAMBLER

THE MARK OF DISTINCTION FOR SCRAMBLER AFICIONADOS.

In the 1920s, the term “scrambler” was used in England to designate races on dirt tracks, the forerunner of motocross. This term would be taken up in the U.S. in the 1950s and ‘60s to refer to a road motorcycle with off-road ambitions. Today, a Scrambler is a motorcycle (new or vintage) with a stripped-down vintage look that can ride on and off the asphalt. And now, it signifies a glove from our Custom collection devoted to fans of this type of machine, or simply their signature style. It opts for a clearly pared-down, “customizable” look, with its distinctive, interchangeable velcro patches. True comfort is reflected in its stretch, ventilated topside construction in Twill Span and palm in Nash synthetic leather. It offers marvelous grip on the handlebars, and its brown color beautifully contrasts with the rest of the glove. Perforated, supple, durable goat leather adorns the outer fingers and wrist of the glove. Protection is also assured by several foam reinforcements placed around the most exposed zones, which has allowed this glove to obtain a CE level 1 certification. The Scrambler offers vintage charm with a unique, modern touch. It even features the Touch Screen™ system on the index finger for handling device screens... Further proof that you can be inspired by the past but live at today’s pace.

IOWA 66

THE QUINTESSENTIAL
CUSTOM GLOVE.

The IOWA 66 is designed to reflect the very essence of a custom-vintage glove. Fans of custom style sometimes convert work gloves for riding use, but the problem is that they don't fulfil any of the essential characteristics needed when driving a motorcycle, either in terms of comfort or safety. FIVE now offers a style inspired by these gloves that are highly popular with custom addicts yet featuring specs that are unique to steering a two-wheeled vehicle. And this makes all the difference. Crafted in particularly durable full-grain cowhide that offers a suppleness that's rare for this type of glove, the IOWA 66 stands out from the pack with its extreme comfort and a fit that's head-and-shoulders above the rest, notably due to its thumb construction inherited from our experience in racing. Beneath its seemingly minimalist appearance, it features all the best that FIVE has to offer in terms of quality fit and control sensitivity, as well as the attention to detail typical of our designs. Everything has been envisioned for this apparently minimal glove to offer you maximum enjoyment (and authenticity) when you're at the controls.

BRUSH GOLD
XS-07 / S-08 / M-09 / L-10

KANSAS^{WP}

THE CUSTOM GLOVE THAT'S ULTRA-PROTECTIVE... EVEN FROM THE RAIN.

Because you may want to ride in Vintage or Neo-Retro style even when the weather's bad, FIVE now offers a weatherproof mid-season version of its top-selling Custom style. Based on our most protective Custom glove, the Kansas WP echoes all the characteristics of the Kansas, with the addition of a weatherproof, breathable 5-DRYTECH™ internal membrane to keep your hands dry when it rains. Featuring a one-piece metacarpal protective shell inserted underneath the leather, and numerous reinforcements at exposed points, the Kansas WP offers extreme protection. It also offers an optimal level of comfort, fit, and control sensitivity for a weatherproof glove, due to, among other factors, its external stitching. It marvelously combines a classic spirit with modern details, since its index finger hosts the Touch Screen™ system that lets you handle device screens without taking your glove off. The look and the weatherproof nature of the Kansas WP are sure to delight fans of bold machines, who never say no to a ride, even when the weather looks unpredictable.

TECHNICAL FEATURES

01. 100% full-grain goat-leather construction, for suppleness (topside and palm)
02. One-piece PVC metacarpo-phalangeal protective shell underneath the leather
03. External stitching on the fingers, for optimal fit
04. 5-DRYTECH™ weatherproof, breathable membrane
05. Internal comfort lining
06. Closure and adjustment system featuring a zipper + velcro flap and on/off pull-tab
07. Leather accordion comfort gussets on the fingers and thumb
08. Leather accordion + elastic wristband, for added comfort

TRAIL ADVENTURE

EXPLORE THE WORLD
WITHOUT LEAVING
YOUR COMFORT ZONE.

The world is such a big place, and the planet is so beautiful, that it would be tempting to set off on a voyage to discover its many wonders. With some machines, you could easily gobble up the miles, on the asphalt or on dirt tracks, exploring every last nook and cranny of it.

Riding long-distance, through different lands and varied terrain, requires first-class equipment. Gloves from the TRAIL ADVENTURE collection prove to be as multifunctional, comfortable, and tough as the motorcycles made for extensive travel. These gloves offer unprecedented technical solutions that allow them to traverse big country, just as they can be effective for every day. Because you don't necessarily have to ride for thousands of miles (or kilometers) to fully enjoy the virtues of our TRAIL ADVENTURE gloves. Sometimes, adventure and escape start at the end of your street...or just in your head.

TFX1 GTX

THE ULTIMATE
TRAIL ADVENTURE GLOVE!

When you head off to into uncharted territory at the handlebar of a machine made to devour thousands of miles, it's only right to expect the finest in comfort, safety, and durability. This is exactly what you'll get from the TFX1, a brand-new style in the FIVE Trail Adventure range and our premium offering in this category. It includes materials and a design that make it the ultimate in grand touring equipment. Its digitalized full-grain goat leather palm construction, and a topside that combines water-repellent stretch fabric and RipStop, give it a level of comfort and toughness that are essential for long days on the road. Exceptional fit, a true FIVE hallmark, is in full effect here. Its GORE-TEX® breathable/weatherproof membrane bonded to the palm liner and leather shell keeps you perfectly protected from bad weather (including driving rain), with maximum sensitivity at the controls.

The TFX1 has all you need in terms of protective elements, without hindering your movements when you ride, including a large SuperFabric® insert inside the palm, all the way through to the outer fingers, to protect you if you take a spill, without interfering with proper grip, or its new ERGO PROTECH® shell in semi-soft TPR. Its dual-fastening system with a V-shaped band and velcro allows for ultra-precise adjustment over or underneath the sleeve of your jacket. Featuring Clear Vision Pad™ visor-cleaning and Touch Screen™ systems, the TFX1 always keeps you in control of your navigational devices. Its technical qualities and cutting-edge design are sure to satisfy those who can't imagine heading off on a long road trip without the right equipment... and who want nothing less than the very best!

TECHNICAL FEATURES

01. Topside: Water-repellent stretch and RipStop™ fabric construction for weatherproofing and comfort
02. Palm: full-grain goat leather for suppleness, and digitalized leather reinforcement at contact points for optimal grip in wet weather, and wide SuperFabric® protective reinforcement that covers the thenar eminence and the hypothenar
03. GORE-TEX® Grip™ breathable, weatherproof membrane molded to the lining on the palm side
04. ERGO PROTECH® one-piece metacarpo-phalangeal protective shell in soft TPR . Memory-foam and TPR reinforcement on the back of the hand
05. Phalangeal protective elements in soft TPR on the index and middle fingers
06. Forearm protection with a thick, semi-soft TPR 3D shell
07. Wide SuperFabric® reinforcement on the little and ring fingers
08. Anti-twist accordion strap between the little and ring fingers so your fingers don't get pulled apart if you fall (a FIVE innovation)
09. Comfort gusset on the index and middle-finger joints
10. Outside seaming on the fingers
11. Memory-foam reinforcements on the thumb and palm
12. Silicone print on the palm for improved grip
13. Inner lining featuring "map"-style silk-screened design
14. Stretch V-shape and velcro dual-construction closure system with gripper tab, one on the wrist and the other on the sleeve, for perfect fit
15. Pull'N'Ride tab for easy on/off
16. 3D reflective patches
17. Clear Vision Pad™ visor-cleaning system on the left-hand side
18. Touch Screen™ system (index finger and thumb) for handling electronic devices

TFX2^{WP}

FOR FARSIGHTED ADVENTURERS.

The TFX2 is made for adventurers who leave nothing to chance. And, in particular, for those who demand a protective and comfortable glove that allows them to ride worry-free on any type of road, or face anything that Mother Nature can throw at them. Because when you set off for adventure, you may set off under bright sunshine, and finish the day in the driving rain. With its water-repellent, laminated fabric construction and its 5_DRYTECH™ weatherproof/breathable membrane, it offers unparalleled dryness, while allowing for a healthy evaporation of perspiration, which often happens when you ride hard on unpaved tracks. The TFX2 offers many details that are essential for long rides, like the Clear Vision Pad™ visor-cleaning system, or the Touch Screen™ electronic device-handling system, which allows you to find your way easily using your GPS or smartphone, without taking your glove off. And we haven't skimped on protection here, either, with its PVC shell and numerous reinforcements, on the topside, and its wide Kevlar® panel on the palm side, covering from the base of the hand all the way up to the hypothenar, under which three foam elements are inserted, for comfort. The palm also features a Digital PU reinforcement for impeccable handlebar grip when it rains. Comfortable, lightweight, and tough, both on falls and on rainstorms, the TFX2 will be there, ready to take on any adventure.

TECHNICAL FEATURES

01. Stretch, water-repellent fabric construction (topside), for dryness and comfort / Full-grain goat leather (palm), for suppleness
02. 5_DRYTECH™ weatherproof, breathable membrane
03. One-piece PVC metacarpo-phalangeal protective shell underneath the fabric / Window-panel construction
04. Soft TPR index and middle-finger knuckle protection
05. Index and middle-finger comfort gussets, with reflective inserts
06. Protective foam reinforcement on all knuckles
07. Forearm protection from a cuff with integrated memory foam
08. Wide Kevlar® reinforcement, from the base of the hand, all the way up to the hypothenar
09. Digital PU palm reinforcement, for better grip on the handlebars
10. Dual closure system (wristband and cuff) using an elastic strap and velcro
11. Adjustment tab concealed underneath a Kevlar® panel
12. Retro-reflective fabric on the wristband
13. Lycra®-style fourchettes (between the fingers)
14. Clear Vision Pad™ visor-cleaning system on the left-hand side
15. Touch Screen™ system (on the index finger) for handling electronic devices

TFX3

THE SHORT GLOVE FOR LONG TRACKS,
EITHER PAVED OR GRAVELED.

Another asset in our Trail Adventure range, the TFX3 is a small, lightweight, short glove that won't weigh you down, perfect for taking on all types of road trips or rides when the weather's fine. Protective and comfortable, it boldly shows off its adventurous spirit with its elegant look and meticulously designed technical specs. The Clear Vision Pad™ and Touch Screen™ systems for navigating comfort, Digital PU insets on the palm and the thumb for grip, a wide 2-Way Spandex™ strip on the topside for flexibility, ERGO PROTECH® TPR shells and Kevlar® reinforcement for protection, and a goatskin palm for suppleness... the TFX3 has everything to make it your perfect companion. And because you can never be completely sure there won't be some scattered showers, especially in the summer, it even features, on its top-side, coated, water-repellent stretch fabric that makes the drops slide right off. And we haven't even mentioned its weatherproof qualities, almost like it had a membrane; we could call it water-resistant, enough to protect you from unexpected light rain. The TFX3: all the advantages of a short, lightweight glove to venture out on the track in summertime, whether you hit the road or ride on gravel.

TFX3 AIRFLOW

FOR A BREATH OF FRESH AIR.

A ventilated version of the TFX3, the TFX3 Airflow qualifies as a small, short, lightweight, and thus, non-bulky glove that's perfect for all types of road trips or treks in dry, warm weather. It naturally echoes the characteristics of the TFX3, though with materials designed to optimize airflow. Both protective and comfortable, it also offers an adventurous look. With its Touch Screen™ system for navigational comfort, a Digital PU panel on the palm and thumb for better grip, a wide 3D Mesh band on its topside for ventilation, ventilated ERGO PROTECH® TPR shells and Kevlar® reinforcements for protection, and a palm in goat leather for suppleness, perforated for airflow, the TFX3 Airflow has everything to make it your perfect travel companion, whenever the mood strikes to... get some fresh air.

TECHNICAL FEATURES

01. Mixed fabric and honeycombed 3D Mesh construction (topside), for ventilation and comfort / Full-grain goat leather (palm) for suppleness, perforated for airflow
02. Dual ventilated FIVE AirGO PROTECH® soft-TPR metacarpo-phalangeal protective shells
03. Ring and pinky finger knuckle protection in Soft TPR
04. Foam protective reinforcements on all knuckles on the outer fingers
05. Kevlar® reinforcements on the hypothenar muscle
06. Digital PU reinforcement for enhanced grip on the handlebars
07. Quick-close Velcro tab system
08. Reflective fabric on the wrists

TFX4

FOR NEW ADVENTURERS.

The TFX4 represents the entry-level style in the FIVE Trail-Adventure range...in every sense of the word! Accessible, because it's inexpensive, easy to wear, and because it meets all your basic needs for paved or dirt-road use. Lightweight, comfortable, and sleek, it is nevertheless quite protective, with its dual ERGO PROTECH® soft shell and wide Kevlar® panel covering nearly half of the palm, made of synthetic leather. Indeed, the TFX4 features no elements of animal origin, to the delight of vegan adventurers. A silicone print on the index and middle fingers improves your grip on the controls in wet conditions. The use of water-repellent fabric on the zone around the protective shells allows the water to slide over this area, in case you get splashed when you cross a river or get peppered by unexpected light rainfall. The TFX4 is, admittedly, not weatherproof, but this makes it even more versatile. This is a glove you'll reach for when you want to travel light, yet it has so many possible uses. From a ride on a sun-drenched road, to a jaunt on a gravel run in much less predictable circumstances, the TFX4 is always ready to head off for adventure.

TECHNICAL FEATURES

01. Mixed stretch, water-repellent fabric and 4-way Spandex™ construction (topside)
02. Synthetic leather palm
03. Dual soft-TPR ERGO PROTECH® metacarpo-phalangeal protective shell
04. Wide Kevlar® reinforcement, from the base of the hand all the way up to the hypothenar
05. velcro closure tab and base of the thumb in Airprene® fabric, offering both support and ventilation
06. Lycra®-style fourchettes (between the fingers)
07. Touch Screen™ system (on the index finger) for handling electronic device screens
08. Anti-slip silicone print on the index and middle fingers, for better grip on the controls
09. Deflector flap in retro-reflective fabric on the top of the hand
10. Heat-welded FIVE sonic logos that act as protective elements

WINTER

ENJOY RIDING
IN COLD WEATHER.

In the winter, more than any other time of the year, riding requires serious steering skills. The slippery street and road surfaces mean that ugly surprises await you at every turn.

The wind and the extra-low temperatures assault your extremities, starting with your hands, and can affect your reflexes. So, winter calls for specially designed and adapted equipment. The effectiveness of a winter glove lies not only in its thickness, but in a plethora of details that make a difference once you start riding in the cold. This is exactly what we offer in our winter range. It includes a glove for every circumstance, and on each and every one, we aim for a perfect balance: quality materials / thermal insulation / weather-proofing / comfort / steering sensitivity / protection.

You will also find some of our winter gloves aimed to riding in the city in our URBAN range.

WFX PRIME GTX

THE NEW-GENERATION WINTER GLOVE.

With the WFX Prime, FIVE offers real innovation, introducing its first heat-sealed, seamless glove, for total weatherproofing. The construction of this premium winter glove has a truly modern feel.

Our use of cutting-edge materials, such as Soft-Shell construction, a GORE-TEX® Grip™ membrane, and Primaloft® Gold ultra-high-performance, water-repellent thermal insulation has made for a weatherproof, warm winter glove that's light on bulk. It also offers unparalleled control sensitivity for a winter glove, with any bulk contained around the hand area, and exceptional dynamic and thermal qualities so you can fearlessly face the storms and the cold. Because in winter, it's easy to take a spill when the temperatures drop, the WFX Prime features top-of-the-line protective elements, such as the new ERGO PROTECH® one-piece shell or the large panel in SuperFabric®, a heavy-duty fabric that contains Epoxy resin microbeads covering most of the palm zone, all the way up to the outer fingers. These elements protect you without slowing you down, since it's crucial to have total freedom of movement in the fingers and stay alert at the controls when you ride in wintertime conditions. And so, with all this mind, we proudly present the WFX Prime: all the advantages of a lightweight, supple glove, with total warmth as a bonus.

TECHNICAL FEATURES

01. Topside: construction in Soft Shell fabric
02. Palm: full-grain goat leather for suppleness, with a digitalized rubber reinforcement at the contact point for optimal grip in wet weather, and a wide SuperFabric® protective reinforcement covering the thenar eminence and hypothenar, lined in memory foam
03. GORE-TEX® Grip™ breathable, weatherproof membrane that molds to the shape of the palm lining
04. Primaloft® Gold 200g water-repellent thermal topside insulation (equivalent to double its weight at our competitors) and Primaloft® Grip Control 60g on the palm side
05. Seamless heat-sealed construction for optimal weatherproofing
06. ERGO PROTECH® one-piece metacarpo-phalangeal protective shell in heat-sealed soft PVC inserted underneath the Soft-Shell fabric
07. Over Size Cuff System: adjustable cuff system. This allows you to adjust the cuff around your jacket's sleeve and includes a weatherproof YKK zipper
08. Dual cuff and wrist closure system, with a large digital rubber and velcro tab. Wrist-fastening strap with gripper tab in TPR, secured underneath a leather flap
09. Reflective logo embellishments and textured inserts
10. Memory-foam and TPR reinforcement on the thumb, ring, and little fingers
11. Comfort gusset at the joints and on the wrist
12. Bemberg™ internal comfort lining for more softness
13. Weatherproof, anti-drip cuff lining
14. Clear Vision Pad™ visor-cleaning system on the left-hand side
15. Touch Screen™ system (index finger) for handling electronic devices

WFX SKIN EVO GTX

THE NEW ALL-LEATHER URBAN & TOURING GORE-TEX® WINTER GLOVE.

The WFX Skin Evo GTX represents an alluring evolution of the WFX Skin GTX, our bestselling urban/suburban winter glove. Though its predecessor was essentially designed for city riders, the WFX Skin Evo GTX wants to be more versatile. It widens the riding spectrum and will also delight Touring fans looking to have an understated, comfortable, and elegant leather glove to face the winter. Made mostly of full-grain Napa goat leather, renowned for its extreme suppleness, with the addition of a few stretchy Softshell fabric inserts for ease of movement and comfort, it aims to be protective, in every sense of the word, in the city or on the road. Its GORE-TEX® weatherproof, breathable membrane and PrimaLoft® Gold water-repellent thermal insulation offer the best possible guarantee that you'll stay dry and warm in bad weather; this is why we've opted to use these premium elements on the WFX Skin Evo GTX. And to stop any raindrops from getting inside your sleeve, the cuff is now covered with Taslan™ water-repellent fabric, for truly optimized weatherproofing. In terms of safety, the WFX Skin Evo GTX has naturally adopted the latest generation of FIVE ERGO PROTECH® ergonomic protective shells, including a semi-soft, honeycombed shell on the palm, to protect you in case you take a spill. The topside shell is simply concealed underneath the leather, for a more subtle look. The dual-closure system also promises perfect fit and support. We've obviously also offered you the ability to handle your touchscreen devices and wipe off your visor while you ride with the WFX Skin Evo GTX, which features the Touch Screen™ and Clear Vision Pad™ systems. Discretion and protection (against the cold, rain, and any falls) are the key concepts that we had in mind when we developed the WFX Skin Evo GTX.

As you can see, here, we're in the presence of a refined and comfortable glove that will take you elegantly and effectively from the city during the week to the road on the weekends, all winter long. Available in men's or women's versions.

TECHNICAL FEATURES

01. Napa goat leather + softshell topside construction
02. Full-grain goat leather palm
03. GORE-TEX® weatherproof / breathable membrane
04. PrimaLoft® Gold 200g thermal insulation on the topside
05. PrimaLoft® Grip Control 60g thermal insulation on the palm

WFX CITY EVO GTX

LONG OR SHORT...
LENGTH TO CHOSE, COMFORT IN BOTH.

You have a choice between a long or a short version. The WFX City Evo GTX is the ideal glove to face the winter with elegance, both in the city and the suburbs, and to take on middle-distance road trips with peace of mind. Its topside construction in Softshell fabric is both windproof and water-repellent. Its leather palm featuring a soft slider and honeycombed ERGO PROTECH® metacarpal protective shells hidden underneath the fabric offer impeccable protection. Weatherproofing is ensured by a breathable GORE-TEX® membrane, the benchmark name in the field. As for thermal insulation, the WFX City Evo GTX introduces an innovative concept in terms of construction. Most winter gloves have been made the same way for ages...To put it simply: Thick thermal insulation over the top of the hand, and a finer layer on the palm, all the way up to between the fingers. And here was the weak spot of this traditional construction. The cold ends up getting inside through the fourchettes (which is what the area between the fingers is called). FIVE has reinvented the fundamentals of thermal insulation using a new type of construction called THERMO+™, offering up to 20% greater heat retention, based on PRIMALOFT® insulation, the very best in the field. The concept is quite simple: thick insulation on the topside extends down between the fingers, whereas the thinner insulation is limited to the (flat) base of the palm and fingers. This implies reconsidering all the other elements in the glove, such as the external structure or the weatherproof membrane, in order to maintain perfect suppleness overall and a firm grip on the controls. It's when you ride in the cold that you understand the point of this Thermo+™ construction. The thicker, denser insulation in the fourchettes constitutes a much more effective thermal barrier and helps keep the hand's natural heat within the glove for longer. Add to this the dual (thumb and index finger) Touch Screen™ system for handling electronic devices, the Clear Vision Pad that allows you to wipe off the visor of your helmet while you ride, the dual closure system that includes the Over Size Cuff (on LONG version) to make it easier to fit the cuff over your jacket's sleeve, and you have a sure bet to face the city in the wintertime.

EN 13594:2015

TECHNICAL FEATURES

01. Softshell fabric topside for greater comfort
02. Supple full-grain goat leather palm
03. GORE-TEX® breathable and weatherproof membrane
04. Innovative FIVE Thermo+ Insulation offering 20% more insulation, includes PrimaLoft® Silver 200 g on topside and 60 g Gold Grip control in palm
05. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. LONG version: Over Size Cuff System - adjustable cuff system to adjust cuff around jacket's sleeve. Includes a weatherproof YKK zipper. Velcro wrist closure.

WFX1 EVO WP

THE WINNING COMBINATION OF LEATHER AND FABRIC TO FACE THE RIGORS OF WINTER.

Usefully combining the benefits of leather with the technical advantages offered by some synthetic materials was our goal in designing the WFX1 EVO WP, a modern, warm, comfortable, protective, and supple glove to face the harshness of winter. Its entire palm is made from goat leather, renowned for its extreme suppleness. The same goes for most of its topside construction, to which we've added water-repellent, stretch technical fabrics. The main asset of this WFX1 EVO WP is clearly its Primaloft® thermal insulation, a sort of water-resistant, synthetic down fill that captures the natural heat of your hands to create a thermal barrier against outside temperatures. The 5_DRYTECH™ membrane ensures the breathability and weatherproofing you need when it's raining. It's glued to the palm, ensuring that it stays put and offering better grip on the handlebars. An internal lining on the top of the hand in synthetic fur adds a feeling of soft comfort that's comforting when the cold gets to you. Protection is provided by a one-piece ERGO PROTECH® shell concealed under the fabric on the metacarpals, and by the very latest in soft palm shells, along with reinforcements on the outer fingers. Comfort gussets around the wrist contribute to perfect freedom of movement. Particular attention has been paid to the cuff and the closure system. The Over Size Cuff System allows you to adjust the length of the cuff using a weatherproof zipper, so you can more easily wear it over your jacket's sleeve. A two-point adjustment-strap anchor ensures perfect wrist hold. The WFX1 EVO WP features elements that make your everyday ride more enjoyable, such as the Touch Screen™ system for handling device screens, or the Clear Vision Pad™ on the left hand, which allows you to wipe off your helmet visor while you ride. WFX1 EVO WP: the glove designed for long rides in the rain or cold, while your hands stay warm and dry.

EN 13594:2015

TECHNICAL FEATURES

- Mixed goat leather and fabric construction (topside) / Goat leather (palm)
- Weatherproof and breathable 5_DRYTECH™ internal membrane
- Primaloft® Silver 200g (topside) and Primaloft® Grip Control 60g (palm) thermal insulation
- ERGO PROTECH® PVC metacarpophalangeal protective shell under nylon
- ERGO PROTECH® soft TPR hypothenar protective shell (palm slider)
- Palm reinforcement in embossed synthetic leather for optimal grip on the controls
- Nylon accordion comfort gussets
- Textured, reflective 3D logos
- Dual closure system with a concealed velcro adjustment tab under leather, and a cuff adjustment strip
- Touch Screen™ system for handling touchscreen devices
- Clear Vision Pad™ system (left hand) to wipe off your helmet visor while you ride

WFX2 EVO WP

UPDATED,
BUT STILL AFFORDABLE.

The WFX2 EVO WP represents a major evolution over the WFX2 WP making it an even more effective winter glove that remains affordable. Cozier and better equipped than its predecessor, the WFX2 EVO WP will likely soon become a gold standard in this category. Though its topside construction is mainly in nylon, it includes a large palm reinforcement in natural leather with an integrated soft protective slider at the hypothenar, guaranteeing a certain level of comfort at the controls. Its protection from the cold is better than ever, with the use of Primaloft® Silver thermal insulation on the topside and Primaloft® Grip Control on the palm. Weatherproofing and breathability are provided by the 5_DRYTECH™ membrane developed by FIVE. It's glued to the palm, so it doesn't budge and for better grip on the handlebars. In terms of safety, the new one-piece ERGO PROTECH® shell protects the topside of the hand. And we haven't forgotten comfort, with the internal lining that touches your skin offering a truly delightful feeling of softness.

What makes the WFX2 EVO WP stand apart is the real "state of the art" quality and enjoyment its construction offers. Though designed for wintertime urban and suburban use, it may very well take you much further, with features inspired by high-end road gloves.

TECHNICAL FEATURES

01. Nylon construction (topside) / Synthetic leather with goat leather reinforcement (palm)
02. Weatherproof and breathable 5_DRYTECH™ internal membrane
03. Primaloft® Silver 200g (topside) and Primaloft® Grip Control 60g (palm) thermal insulation
04. ERGO PROTECH® PVC metacarpophalangeal protective shell under nylon

WFX3 EVO^{WP}

GREATER COMFORT
AND WARMTH FOR WINTER.

The WFX3 Evo WP is made for those who want to ride with peace of mind all winter long, in the city or on medium-distance journeys, with a warm, effective glove at an affordable price. Combining water-resistant Softshell-fabric topside construction with a palm in Amara synthetic leather, and featuring genuine leather reinforcements for enhanced protection and durability, this glove uses our signature solutions for weatherproofing and thermal insulation. These include a 5_DRYTECH™ waterproof, breathable membrane and 5_WARMTECH™ integrated thermal insulation (200g on the topside / 60g on the palm), developed specifically for motorcycle riding by our R&D department, ensuring your protection against the rain and cold. One of the characteristics of the 5_DRYTECH™ membrane is that it's perfectly bonded with the palm, for optimal grip on the handlebars and impeccable fit. In terms of safety, the WFX3 Evo WP offers the latest generation of ERGO PROTECH® ergonomic protective shells developed by FIVE, along with reflective elements that are so useful in winter, when the days are shorter, to help you stay visible to others on the road. Its dual-closure system also provides an additional guarantee of safety. In terms of practicality, the Touch Screen™ system on the index finger allows you to handle your GPS or smartphone touchscreens without taking your gloves off.

With its updated aesthetic, total comfort, and optimized features, the WFX3 Evo WP offers an even more alluring package than its predecessor and positions itself as the obvious choice for anyone who wants a winter glove that provides excellent value and performance for the money.

TECHNICAL FEATURES

01. Softshell topside construction
02. Amara synthetic leatherpalm with genuine leather reinforcements
03. 5_DRYTECH™ weatherproof, breathable membrane
04. 5_WARMTECH™ 200g thermal insulation on the topside
05. 5_WARMTECH™ 60g thermal insulation on the palm

WFX4^{WP}

EFFECTIVE YET AFFORDABLE,
THE NEW WINTER GLOVE FOR EVERYONE.

The WFX4 WP is our new entry-level offering and seeks to make the key features that make winter gloves effective in the city or on short rides, affordable and accessible to all (men, women, and children)...with quality fit as a bonus (the famous FIVE fit)! It features 170g 5_WARMTECH™ thermal insulation on the top-side of the hand, which is lined with insulating foam on the palm side, to effectively protect your hand from the cold. And since it's better to be prepared for humidity or rain, which are more common in winter, the WFX4 WP also has a waterproof, breathable 5_DRYTECH™ membrane, developed specifically by our R&D department for motorcycle use, which is also partially bonded to the palm for optimal grip on the handlebars and perfect fit. Its "no-leather" construction (topside construction in water-repellent Softshell fabric and the palm in Amara synthetic fiber) makes it a 100% vegan product, which should delight anyone who cares about animal welfare. Like its more advanced siblings, the WFX4 WP offers the latest-generation ERGO PROTECH® ergonomic shells, developed by FIVE, ensuring excellent protection without hindering your movements. Ultra-practical, the Touch Screen™ system on the index finger allows you to use your GPS or smartphone touchscreen without taking your gloves off. As a main pair for budget-conscious riders, or an extra pair to keep in your top case, the WFX4 WP is an interesting and affordable base product to help you keep riding your motorcycle or scooter in the winter. There's no doubt about it: it's the one to take out as soon as temperatures start to drop.

TECHNICAL FEATURES

01. Softshell topside construction
02. Amara synthetic leather palm
03. 5_DRYTECH™ weatherproof, breathable membrane
04. 5_WARMTECH™ 170g thermal insulation on the topside

WINTER RIDES?...
FEEL THE HEAT.

THE NEW FIVE HG RANGE

In 2023, we've totally revamped our range of heated gloves, in a desire to make them even safer, more practical, and high-performance.

The four styles that make up our HG range share a common set of characteristics, including:

- ERGO PROTECH™ protective elements
- PRIMALOFT® thermal insulation
- The 5_Drytech™ waterproof, breathable membrane (except for the HG Prime GTX, which features a GORE-TEX® membrane)
- The latest generation of our FIVE battery-powered heating system that includes an electrical-filament circuit that goes over the back of your hand and down the fingers, all the way to the inside of the last finger
- A new design that lets you to recharge your batteries while you ride. (Using the optional Connection Kit cable, which you can purchase from your FIVE reseller.)
- And lastly, our brand-new DUAL CONTROL adjustment and control system.

Each style then stands out due to its external construction and a few details related to design, materials, or finish.

The HG Prime GTX epitomizes the modern spirit and heads up the range with its GORE-TEX® membrane, heat-sealed, seamless Softshell topside construction inspired by extreme sports, and full-grain leather palm.

The HG1 Evo WP gives pride of place to leather, using it both for its topside construction and on its palm. It also features a 5_Drytech™ waterproof, breathable membrane, like its lower-end siblings.

The HG2 Evo WP blends nylon topside construction with a leather palm, offering riding pleasure to a wider audience.

The HG3 Evo WP, the most affordable style in the range, which is also available for women as the HG3 Evo WP Woman, opts for a “no-leather” vegan solution, with nylon topside construction and a Nash synthetic palm.

Each style is perfectly positioned to offer the best possible value for money, depending on your preferences and your budget, whether you love the most advanced products like the HG Prime GTX, reliable choices like the mostly leather HG1 Evo WP, versatile options like the HG2 Evo WP, or affordable, entry-level styles like the HG3 Evo WP.

FIVE HEATING TECHNOLOGY: THANK YOU, ELECTRICITY!

In theory, a heated glove is a winter glove with an added electrical resistor circuit powered by individual batteries, placed within the gloves or directly connected to the motorcycle*.

Its purpose is to produce artificial heat that repels the cold riders eventually feel when at the controls of a motorcycle in winter. But the inclusion of these electrical circuits requires a specific design and a certain level of expertise.

Our HG technology includes 1.3 mm-thick resistors (in other words, electrical wires), strategically placed on the back of the hand and the fingers, all the way down to their very tip, and on the inside of the last phalange. This type of construction offers uniform heat right where the cold is most acute, without compromising on palm sensitivity. Indeed, we haven't placed electrical resistors on the inside of the palm so we don't hinder your grip on the controls, but we have inserted a thin layer of thermal insulation. The heated handlebars grips of some motorcycles, which heat the inside of the palm, offer a good addition to heated gloves, which warm up the zones that are most exposed to the cold: the back of the hand and the fingertips. But there's a major difference between the temperature sent through the resistors and what the rider will feel when they're on the move. The latter depends on external factors such as riding speed, the outside temperature, the wind, the length of the ride, the period of exposure to the cold, each individual's temperature sensitivity, etc. Each rider will thus adapt the level of heat as desired, depending on these different parameters. Our system offers 3 levels of heat: Eco, Regular,

and Boost. Each of these sends 45°C, 50°C, or 60°C heat through the circuit, to keep hands at a comfortable temperature. The goal isn't to feel too much heat, but simply to make sure that your hands don't get too cold during your ride. In Eco mode, battery life can last up to 6 hours. In Boost mode, which consumes more energy, power will last for around 2 hours. Battery life will vary depending on various parameters (the actual battery charge level, the temperature, the level of humidity, etc.).

Our new HG technology now features a second cable within the battery pocket for connecting the gloves to an AC electrical charger or our motorcycle connection kit. The batteries can then be recharged while you're heating the gloves. The 7.4 volt, 2.2 Ah batteries reach a full charge in just 4 hours with the dual charger provided. They can remain in their pocket within the glove while they're being charged.

Optional connection kit

When you ride, the temperature drops as you speed up. This is what you call wind chill. At 90 km/h and a 10°C temperature outside, it can rapidly feel below freezing if you're not wearing the right equipment. This is why heated gloves, and the FIVE HGs in particular, are becoming so popular for winter motorcycle rides.

DUAL CONTROL, OR HOW TO MAKE IT EASIER AND SAFER TO ADJUST YOUR HEATED GLOVE CONTROLS.

The new DUAL CONTROL system developed by FIVE wants to make starting up and adjusting your HG heated gloves simpler and safer than ever.

Starting from the premise that the less you let up on the handlebars and controls, the safer your riding will be, we've designed a system that allows you to control the heating and adjust both of your gloves while you keep your right hand on the controls, on the throttle and front brake, which are essential elements for keeping your motorcycle under control. Placed on the cuff or the back of the right hand, depending on the style, the DUAL CONTROL button allows you to activate the heating on your gloves and adjust its level, cycling through the three levels by simply pressing repeatedly with your left index finger. The two gloves are connected using electromagnetic waves. The LED screen on the left glove displays the 3 levels of heat available, as well as the one selected, and the LED battery indicator on each hand allows you to know how much power you have left to heat each glove.

The FIVE Dual Control system, simpler and safer, allows you to stay focused on the road by keeping a hand constantly on the handlebars. It takes our new heating technology, and, especially, the riding experience, to a new level of efficiency and ease of use under wintertime conditions.

HG PRIME GTX

THE ULTIMATE GORE-TEX® HEATED GLOVE.

To make what we consider the best heated glove we've ever produced, we started with the construction of our highest-performing winter glove, the WFX Prime GTX, borrowing all its signature comfort and protection from the cold, rain, and impacts, then adding in our brand-new HG Dual Control heating system. With this system that allows you to control the level of heat in both gloves using a single button on the right hand, we've focused on making riders' lives easier and optimizing their safety.

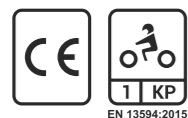

This way, your right hand can stay on the controls (throttle and front brake), ensuring a safer experience when you change the level of heat while you ride. For effective protection from bad weather, the HG Prime GTX features a GORE-TEX® Grip™ weatherproof, breathable membrane bonded to the palm of the glove. It's nothing less than the highest-performing membrane on the market; its specific construction offers incomparable grip on the handlebars and precision at the controls.

The heat-sealed, seamless topside construction of the HG Prime GTX, in addition to its ultra-modern look that reminds us of extreme-sports apparel, further enhances its protection against water, wind, and cold.

In terms of thermal insulation, and to ensure that the glove protects you from low temperatures even when the heating system isn't activated, we've called upon the expertise of PrimaLoft®, the absolute benchmark in the industry, and its PrimaLoft Gold™ insulation. (The HG Prime GTX is the only glove in the range to offer a 200 g version instead of the 170 g that the other styles have). Less bulky but more insulating than most, it traps the natural heat from your hands. Since it's also water-repellent, it doesn't take on water or moisture of any kind. And most importantly, it offers excellent protection against the cold without making the glove too bulky, which is a real advantage when you ride.

The HG Prime GTX naturally features all the safety (ERGO PROTECH™ protective shells) and comfort (Touch Screen™, Clear Vision Pad™, etc.) elements that are typical of new-gen FIVE gloves. The HG Prime GTX is also one of the first, if not the first, battery-heated glove to include a GORE-TEX® membrane, which, in itself, already makes this an exceptional piece.

It's sure to satisfy the most demanding riders and will surprise you with its extreme comfort and performance. With its ultra-modern design, the HG PRIME GTX is THE ultimate premium heated glove.

TECHNICAL FEATURES

01. Seamless Softshell heat-sealed topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology
04. GORE-TEX® weatherproof, breathable membrane, partly bonded with Grip Technology

HG1 EVO WP

THE ALL-LEATHER
HEATED GLOVE.

The HG1 Evo WP replaces its predecessor, the HG1 WP, which had been our top-of-the-range heated glove, offering the latest generation of Dual Control heating technology. It offers a real advance, both in practical and aesthetic terms, with its ERGO PROTECH® protective elements that are featured in a number of our new styles. It's designed for those who consider leather to be the safest material to protect you if you hit the ground, or if the temperatures drop. Its topside construction and palm are covered in supple full-grain goat leather, making it an elegant, protective, and supremely comfortable glove. With Dual Control, which allows you to control the level of heat for both gloves using a single button on the right hand, we've focused on making riders' lives easier, and their rides as safe as possible. This way, your right hand can stay on the controls (throttle and front brake), ensuring a safer experience when you change the level of heat while you ride. The new-gen plugs within the glove allow you to connect to your motorcycle battery quickly and easily, using the optional Connection Kit*, so you can recharge your gloves' batteries on the go. Because sometimes, you have to wear a heated glove in the rain, the HG1 Evo WP features a 5_DRYTECH™ weatherproof, breathable membrane, developed by FIVE to keep your hands dry. A heated glove should be comfortable even when the heating system isn't activated. So, we've called upon the expertise of PrimaLoft®, an absolute benchmark in the industry, with their PrimaLoft Gold™ insulation. Less bulky and trapping more air than most insulation, it's more effective at retaining the natural heat from your hands. Since it's also water-repellent, it won't take on water or moisture of any kind. This is why PrimaLoft® is the gold standard for mountaineering apparel. The HG1 Evo WP features, of course, all the safety (ERGO PROTECH™ protective shells) and comfort (Touch Screen™, Clear Vision Pad™, Pull'n'ride™) features that are typical of new-gen FIVE gloves.

HG1 Evo WP is made for those of you who consider leather the noblest of materials, and electricity, the best of all inventions.

TECHNICAL FEATURES

01. Full-grain goat leather + nylon topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology
04. 5_DRYTECH™ weatherproof, breathable membrane
05. PrimaLoft® Gold 170 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm

HG2 EVO^{WP}

THE COMBINED LEATHER-AND-NYLON HEATED GLOVE.

The HG2 Evo WP is such a balanced product that it's destined to become a bestseller within our range of heated gloves. It features same characteristics as those of our premium products (Primaloft® thermal insulation, 5_DRYTECH™ weatherproof, breathable membrane, Dual Control adjustment system, etc.) and makes FIVE Heating Technology affordable, with its mixed construction that blends a palm in full-grain leather with a nylon topside. Could this be the perfect mix? With Dual Control, which allows you to control the heat level of the two gloves using a single button on the right hand, we want to make riders' lives easier and optimize their safety. This way, your right hand stays on the controls (the throttle and front brakes), guaranteeing a safer ride when you need to adjust the heat level on the go. The new-gen plugs inside the glove allow you to connect quickly and easily to the motorcycle's battery, using the optional Connection Kit*, recharging your gloves' batteries while you ride. And because sometimes, you need to wear a heated glove in the rain, the HG2 Evo WP features a 5_DRYTECH™ weatherproof, breathable membrane developed by FIVE to keep your hands dry. A heated glove should also be comfortable, even when the heating system isn't activated. So, we've called upon the services of Primaloft®, an absolute benchmark in the industry, with their Primaloft Gold™ insulation. Less dense and trapping more air than most insulation, it's more effective at keeping in the hand's natural heat. Since it's also water-repellent, it doesn't take on any water or moisture. This is why Primaloft® sets the standard in mountaineering apparel. The HG2 Evo WP naturally features all the safety (ERGO PROTECH™ protective shells) and comfort (Touch Screen™, Clear Vision Pad™, etc.) features that are typical of new-gen FIVE gloves.

The HG2 Evo WP is designed for those who demand top-quality, high-performance equipment that will take them far and last a long time, while offering value for money that's beyond compare.

TECHNICAL FEATURES

01. Nylon CatEye topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology

HG3 EVO^{WP}

THE FULLY SYNTHETIC
HEATED GLOVE.

The HG3 EVO WP is an entry-level style in our heated glove range. It nevertheless enjoys the benefits of the same heating technology and same fundamentals as the higher-end styles (PrimaLoft® thermal insulation, 5_DRYTECH™ weatherproof, breathable membrane, Dual Control adjustment system, connectivity...), but its simplified outer construction, which is fully synthetic, keeps its price reasonable. The HG3 Evo WP features all the safety (ERGO PROTECH™ protective shells) and comfort (Touch Screen™, Clear Vision Pad™, etc.) elements that are typical of new-gen FIVE gloves.

So, you may choose the HG3 Evo WP because it's financially attractive, or because it resonates with your values, since no elements of animal origin have been used in its composition...or for both reasons! In addition, women will appreciate having a version of the HG3 Evo WP that's made for their shape, size, and sense of good taste. Available in men's or women's versions.

TECHNICAL FEATURES

01. Nylon CatEye topside construction
02. Nash synthetic leather palm
03. Dual Control™ Heating Technology
04. 5_DRYTECH™ weatherproof, breathable membrane
05. PrimaLoft® Gold 170 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm

ACCESSORIES

HG CONNECTION KIT

Choose the optional HG connection kit to travel far and wide in the cold weather and enjoy unlimited battery life for your FIVE HG heated gloves. It comes with cables that allow you to directly connect your FIVE HG heated gloves to the cigarette lighter or the battery terminals of your motorcycle. The cables come in two sections (a Y-shaped “rider” section that includes a 12 V > 7.4 V transformer, and a “motorcycle” section) that plug into each other. Supplied with two end caps (which are compatible with the cigarette lighter or the battery terminals, depending on what your motorcycle offers), the “motorcycle” cable, particularly if it’s connected to the battery terminals, can simply stay in place once it’s set up. In terms of the “rider” section, the cables are long enough to be placed inside each sleeve and along the body, coming out at the hemline of your jacket, without hindering your movements in the least when you’re at the controls. It easily connects to the gloves using the additional female socket integrated into each glove’s battery compartment. You then simply have to plug in the “rider” cable to the “motorcycle” cable, and you’ll be all set to face the cold without a second thought. The FIVE system has the advantage of keeping the batteries inside the gloves when they’re connected to the motorcycle using the cables. This is much more practical for connectivity, and this way, each battery gets recharged while you ride, giving you the freedom to keep the heating system operating, even when you get off your bike and step away from it to admire the view.

So easy to install and use, the FIVE HG connection kit will be your essential companion on long wintertime rides. No need to worry about your batteries running out, because now you have unlimited power, so you can ride with total peace of mind and nice, warm hands.

Compatible only with FIVE HG gloves.

HG DUAL CHARGER

Though one set comes with each pair of FIVE HG gloves, you may find it helpful to have an extra charger or need to replace a lost one. Whatever the case, we offer the FIVE HG charger as an accessory. It allows you to simultaneously recharge both batteries that come with your FIVE HG gloves in just 4 hours.

Various power adapters are provided depending on your geographical area.
100/240 V Input – 50/60 Hz / 0.6 A Max. / Output 8.4 V DC – 1.3 A – 10.9 W.
Compatible only with FIVE HG gloves.

HG GLOVE BATTERY

To replace a dying battery or one you’ve lost, we offer our FIVE HG batteries as an accessory. The 7.4 V/2.2 Ah batteries charge up completely using the FIVE HG dual charger in just 4 hours.

Voltage: 7.4 V / Capacity: 2200 mAh Current/16.28 Wh Power.
Compatible only with FIVE HG gloves.

ULTRA^{WS}

When winter comes, the cold seeps in during most of our rides. So we need to be ready for it. The best thing to do is to choose winter gloves that are specially designed to offer excellent thermal insulation. But you may also want to use the everyday pair that you normally do when the weather is less severe. One solution to this is to slip on a pair of Ultra WS gloves underneath. Their GORE-TEX® WindStopper structure acts as a barrier against the wind and cold (without being totally waterproof), retaining the heat that’s naturally emitted by your hands. Their thinness allows you to slip them into your usual gloves, as long as the latter are not too tight. These gloves can also be used on their own, for bicycling or on foot for hikes or simple jaunts around town. Truly tough, they’ll be your faithful companion throughout your various wintertime activities.

TECHNICAL FEATURES

- 01. GORE-TEX® WindStopper seamless construction
- 02. Touch Screen™ system on index finger and thumb

UNIT

The cold doesn’t always announce its arrival and isn’t limited to wintertime. You may need some protection from it on chilly mornings or evenings, or even in the daytime when the weather proves to be particularly unpleasant (wind, clouds, etc.).

Wearing UNIT under-gloves underneath your usual gloves will astutely keep away that cold that can so easily creep in under such conditions. Made from tough stretch nylon, they offer a very comfortable additional layer in situations like this.

Truly lightweight, they’ll fit easily in a small bag or underneath your seat, so you’ll always have them ready. They cover a range of sizes and, so, can be perfect for either you or your passenger.

TECHNICAL FEATURES

- 01. Tough stretch nylon fabric topside
- 02. Nylon palm
- 03. Touch Screen™ system on thumb

WOMAN

IT'S NOT ABOUT
RIDING STYLE.
IT'S ABOUT
RIDING WITH STYLE!

RFX SPORT WOMAN - White / Pink

Riding isn't just for men anymore. Women are now joining the ranks of two-wheeled motor connoisseurs in greater numbers than ever... and not just as passengers.

More and more ladies are riding. Our Woman range is designed just for you. Though certain styles echo the technical features of our gloves for male riders, their overall shape, ergonomics, and look are specially adapted to women's hands and their tastes. Because, even on a bike, a woman is still a woman, and will never give up a certain kind of elegance. A woman's hands speak volumes about her personality, so they deserve the finest of care. Our goal is to offer you the perfect glove: one that's both protective and elegant.

RFX1 WOMAN

PREMIUM RACING GLOVES FOR FAST LADIES.

Racing glove designed for the racetrack and sports bikes. The RFX1 includes ventilated PU knuckle shells and a large carbon-fibre shell to protect the forearm. It offers all the features of a top-of-the-line glove geared towards performance. Kevlar® lining, carbon reinforcements and full-grain leather for protection, Stretch Kevlar® for comfort, a protective barrier for both the palm and the top of the hand, while providing an exceptionally lightweight fit. The velcro adjusting tab is concealed beneath a leather protective flap to reduce the risk of the glove being torn off in the event of a fall. This top-of-the-range Racing glove will delight demanding riders of sports bikes, who favor control sensitivity and fit, without over looking safety.

TECHNICAL FEATURES

01. Full-grain cowhide construction (topside) for durability / Full-grain goatskin (palm) for suppleness
02. Ventilated PU metacarpal-knuckle protective shells
03. Protective Carbon palm slider shell
04. Palm reinforcement in digital leather
05. Thenar muscle (palm) reinforcement with a SuperFabric® patch
06. Internal Kevlar® lining
07. Outer stitching on the fingers (Güterman threads)
08. Carbon protective shell on the forearm
09. Stretch Kevlar® comfort panel (topside)
10. Dual closure system
11. Shape and size adapted to the feminine form

RFX4 EVO WOMAN

SOMEWHERE BETWEEN
ROAD AND TRACK.

The RFX4 EVO made its debut within the 2022 collection and is designed for riders who put comfort over performance and are looking for all the versatility of a sport glove...or all the sportiness of a versatile glove. ;) By adopting the brand-new FIVE ERGO PROTECH® ergonomic protective shell used in both our urban and trail gloves, the RFX4 EVO offers a less aggressive look than that of the RFX1, RFX2 and RFX3. Though it fits in so naturally at the controls of a sportier bike, the RFX4 EVO is also right for riding a powerful scooter or a roadster, and thus, offers a more reassuring alternative to short gloves, which are more commonly used with this type of machine. It also offers the extra protection typical of Racing gloves, with all the comfort often found in less exclusive gloves. The RFX4 EVO is well and truly the perfect compromise between our road gloves and gloves for pure racing use.

TECHNICAL FEATURES

01. Full-grain goat leather construction (topside and palm) for suppleness
02. Semi-soft ERGO PROTECH® metacarpophalangeal protective shell
03. ERGO PROTECH® soft TPR hypothenar protective shell (palm slider)
04. PU palm reinforcement for better grip on the handlebars
05. Forearm protection featuring a leather panel and 3D TPR logo
06. Dual closure system with a velcro tab and a cuff adjustment tab
07. Comfort gussets on the wrist and fingers
08. Touch Screen™ system for handling touchscreen devices
09. Shape and size adapted to the feminine form
10. CE KP1

RFX SPORT WOMAN

YOUR DAILY SPORT.

Recently integrated to our Woman collection, the RFX Sport is now the entry-level style for our Racing styles. It's more focused on comfort than performance, and is designed for riders looking for an effective, accessible glove for everyday riding on a sport or road bike. It offers a more-than-satisfactory level of protection and comfort for road use, with its goatskin construction, main one-piece PVC shell concealed underneath the leather (perforated for an energetic look), multiple foam reinforcements, and TPR hypothenar protective shell. It deliberately retains a relatively classic look for a sport glove, so it can be your perfectly discreet companion from the road to the office.

TECHNICAL FEATURES

01. Full-grain goatskin construction (topside and palm) for extreme suppleness
02. PVC metacarpo-phalangeal protective shells under leather (perforated for a great look)
03. Stretch comfort gusset over the wrists
04. External stitching on the fingers
05. Palm and ring and little finger reinforcements in synthetic leather
06. TPR hypothenar protective shell (palm slider)
07. Dual closure system with an adjustment tab under a protective flap
08. Forearm protection from foam reinforcement under leather
09. Index, middle, little finger and thumb knuckle protection from foam under leather
10. Reflective night-time visibility panel

STUNT EVO 2 WOMAN

THE STUNT, ORIGINAL VERSION.

This is clearly the most common, new-gen iteration of the STUNT concept invented by FIVE. Its topside construction in tough stretch Twill Span fabric contributes greatly to the exceptional comfort of this iconic style. It features exceptional protection, given the second-skin feel it offers, with its AirGO PROTECH™ shells inspired by helmet technology (see previous pages), featuring a particularly innovative design. Its 100% full-grain goat leather palm, which is both supple and durable, feels so smooth and soft to the touch...And yet, it offers excellent grip on the controls and hosts a leather reinforcement lined with an ERGO PROTECH® semi-soft, honeycombed protective shell that offers a reassuring feeling of safety, without hindering your movements in any way. With its signature look, the STUNT EVO2 offers its rider a certain kind of status: that of an avant-garde design aficionada, even offering the feeling of being truly on the cutting edge, even ahead of the curve.

TECHNICAL FEATURES

01. Twill Span stretch topside construction
02. Full-grain goat leather palm
03. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
04. ERGO PROTECH® honeycombed palm slider
05. TPR finger protection with air intake vent
06. Softshell thumb construction for optimal finesse and comfort
07. Ultra-tough stretch Nylon fourchettes between the fingers
08. Ergonomic, fused neoprene wristband with integrated velcro closure
09. Touch Screen™ system on the index finger and thumb
10. Shape and size adapted to the feminine form

STUNT EVO 2 AIRFLOW WOMAN

THE STUNT IN A VENTILATED
VERSION.

This is the version of the STUNT EVO2 to use when the mercury starts rising. Its topside construction in ventilated 3D Air Mesh fabric and its perforated full-grain goat leather palm allow for optimal airflow and help perspiration evaporate, since it tends to accumulate when you ride harder than usual. Despite its highly ventilated qualities, the STUNT EVO2 Airflow still offers excellent protection with its AirGO PROTECH™ shells inspired by helmet technology (see previous pages), and their particularly innovative design. Its palm hosts a leather reinforcement lined with an ERGO PROTECH® semi-soft, honeycombed protective shell. You clearly choose the STUNT EVO2 for its avant-garde, even futuristic design, but also, and especially, because there's nothing better for taking the controls of a roadster when the city is suffocating in the heat.

TECHNICAL FEATURES

01. Air Mesh honeycombed topside construction
02. Full-grain goat leather palm
03. AirGO PROTECH™ ventilated metacarpal-knuckle protector
04. ERGO PROTECH® honeycombed palm slider
05. TPR finger protection with air intake vent
06. Softshell thumb construction for optimal finesse and comfort
07. Ultra-tough stretch Nylon fourchettes between the fingers
08. Ergonomic, fused neoprene wristband with integrated velcro closure

TRICKS WOMAN

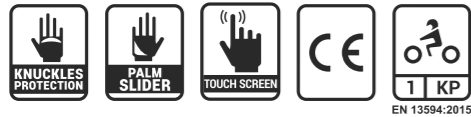

AIRGO PROTECH PERFORMANCE TECHNOLOGY FOR EVERYONE!

TRICKS can be described as an affordable modern glove with an energized aesthetic and protective qualities worthy of more high-end gloves. It includes the new generation of AirGO PROTECH™ Performance shells made up of a rigid external structure and softer honeycombed elements that channel the air into the glove and absorb the energy from any possible impact. Its construction is inspired by helmet technology...These shells are solid enough to earn a level 2 protective designation in and of themselves according to the CE standard, in other words, the highest level. The topside construction in durable stretch Twill Span fabric ensures impeccable comfort and support. The palm in Nash synthetic leather offers excellent grip, and you'll also be protected in case of a fall, with the inclusion of a soft-TPR ERGO PROTECH® shell that's ultra-comfortable at the controls. The TRICKS will be especially appealing to our vegan friends since it contains no elements of animal origin in its composition. Featuring the Touch Screen™ system for handling electronic devices, a Pull'N'Ride pull tab, and a velcro adjustment tab, TRICKS has more than one trick up its sleeve to become the new benchmark glove for its segment. Starting with its superior level of protection, a rare commodity at a price like this.

TECHNICAL FEATURES

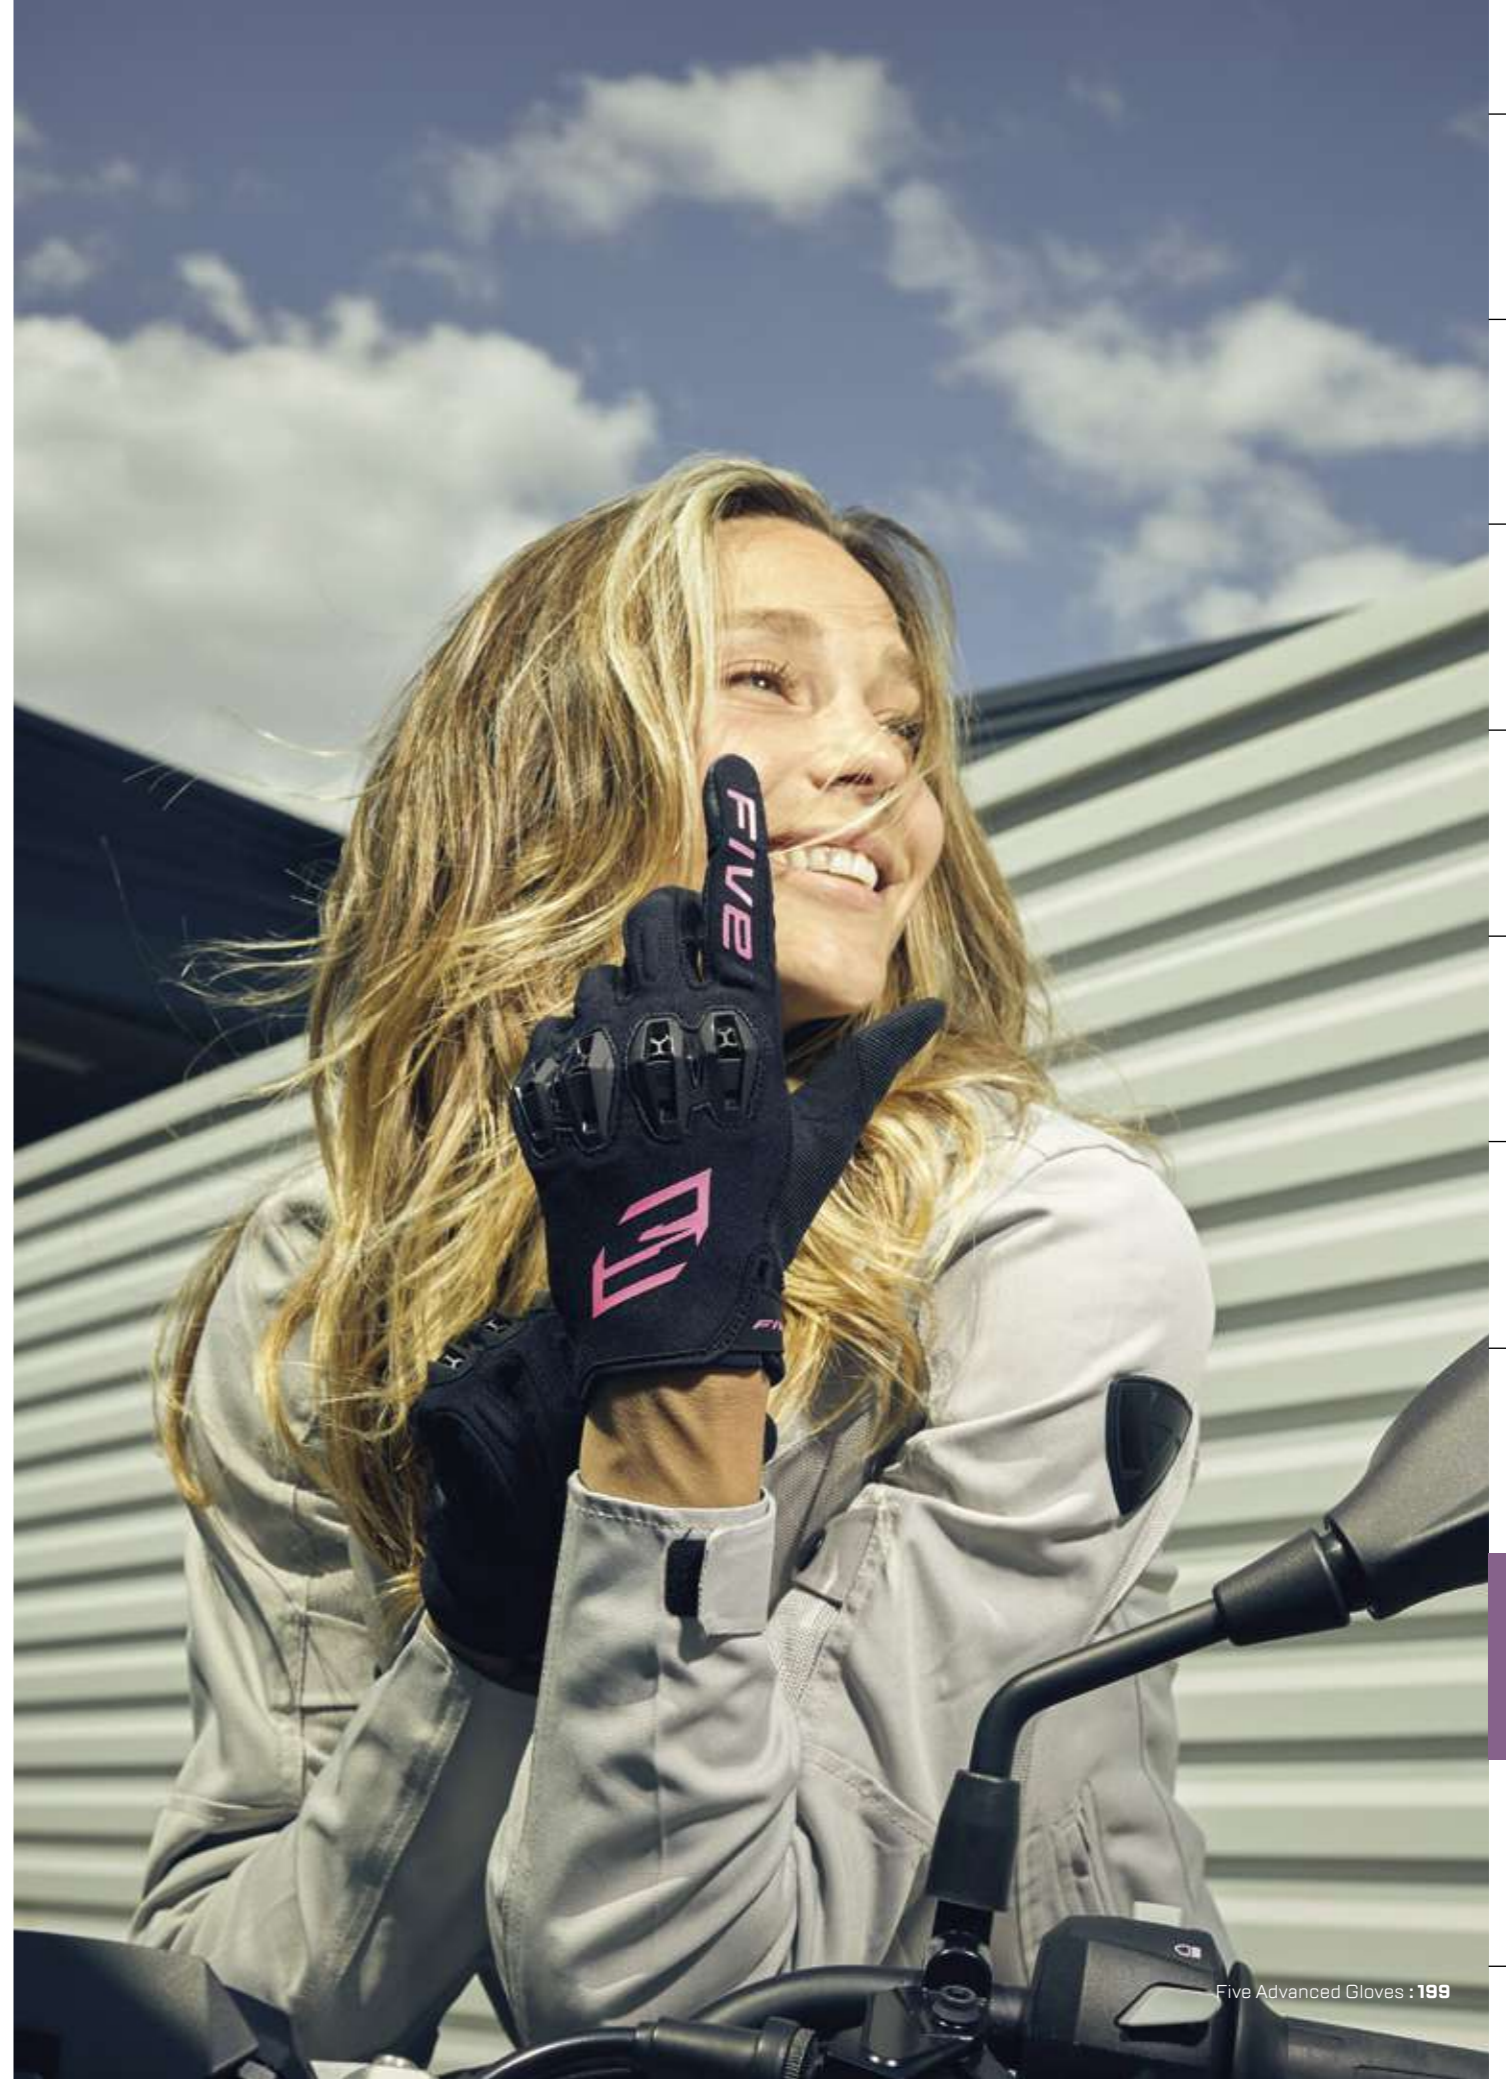

01. Twill Span stretch fabric on topside
02. Nash synthetic leather palm
03. Ultra-tough stretch Nylon fourchettes between fingers
04. Thumb in 4-Way Spandex™ for optimal comfort and suppleness
05. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. Protective reinforcements in 3 mm-thick foam underneath leather on ring, middle, and pinky fingers
08. Velcro tab closure system with Lycra® comfort gusset
09. Silicone print on index finger for better grip
10. Touch Screen system™ on index finger

RS3 EVO WOMAN

THE MULTIPURPOSE URBAN GLOVE.

Totally redesigned in 2022, the RS3 EVO is meant to replace one of the most popular FIVE gloves, the RS3. Made for multipurpose urban use and designed for riders looking for a short, functional, comfortable, and affordable glove that offers a reasonable level of protection, the RS3 EVO is a basic you just can't live without, whether as your go-to glove or as a spare for a passenger. It features the very latest FIVE ERGO PROTECH® ergonomic protective shells for greater comfort and effectiveness, and its 4-Way Spandex™ topside construction gives it both excellent fit and major flexibility. Easy to slip on and take off, it's perfect for riders zipping all over town throughout the course of a day. It will be your faithful companion on your everyday urban rides at the controls of any type of machine. Could the RS3 EVO be setting the new standard in its category? All you have to do is try it, and you'll know it's true.

TECHNICAL FEATURES

01. 4-Way Spandex™ construction (topside) for flexibility / Synthetic leather (palm) for durability
02. One-piece FIVE ERGO PROTECH® Soft TPR metacarpo-phalangeal protective shells under fabric
03. TPR hypothenar protective shell (palm slider)
04. One Way Stretch™ fourchettes for perfect fit
05. Neoprene™ wristband for fit and comfort
06. 3D mesh inserts over the wrist for better ventilation
07. Textured 3D logos and TPR knuckle protective elements
08. Closure system featuring a velcro tab and Pull'N'Ride™ pull tab
09. Touch Screen™ system (index finger) for handling touchscreen devices
10. Shape and size adapted to the feminine form
11. Vegan Friendly

GLOBE EVO WOMAN

THE AFFORDABLE MULTIPURPOSE URBAN GLOVE.

The Globe Evo represents a significant evolution for the Globe, our style focused on meeting the essential needs of urban motorcycle and scooter riders looking for a super-affordable and practical glove. The Globe has been a top seller worldwide and has quickly become a must-have basic. The Globe Evo takes up the straight-forward qualities of its predecessor, upgrading it with the latest generation of ERGO PROTECH® ergonomic protective shells and a new fit that makes it even more comfortable. It features just what you need to ride safely and comfortably in the city. With its updated construction and dynamic look, there's no doubt that the Globe Evo will set a new benchmark in the entry-level segment. It offers the Touch Screen™ system on the index finger, so you can handle device screens, and its “no-leather” composition is sure to delight our vegan friends. The Globe Evo is THE ultimate affordable, versatile glove. Choose it as a main pair or an extra one for your passenger (it comes in both men's and women's versions).

TECHNICAL FEATURES

01. Stretch polymesh topside construction
02. Nash synthetic leather palm
03. ERGO PROTECH® metacarpal-knuckle protector

SPORTCITY EVO WOMAN

THE TOP LEATHER CITY GLOVE,
NOW EVEN BETTER.

The SportCity, designated in its time as the "Top city glove" by influential Moto Magazine, was already one of our most successful styles. The SportCity Evo is even more elegant, protective, and enjoyable to wear every day. It stands out as the ideal short leather glove for riding on basic or classic motorcycles or scooters. Its exceptional fit makes it the perfect companion for when you're out on the town. Its clean, modern look, 100% full-grain perforated leather, and discreet FIVE embossed and flexible metal logo mean that it goes perfectly with any outfit, so harmoniously. It also represents a major leap forward in terms of protection, with the latest generation of ERGO PROTECH® protective shells concealed underneath the leather, for the topside shell, and a semi-soft, honeycombed "slider" on the palm, for unhindered grip on the handlebars. Its dual Touch Screen™ system on the index finger and thumb allows you to use all the features of your GPS or smartphone without having to take off your glove, something super-practical in the urban jungle. The leather on the SportCity Evo, which is both tough and supple, ensures durability and comfort... Once it's subtly burnished and has taken on the contours of your hand, you simply won't want to take it off.

SPARK WOMAN

THE CITY GLOVE THAT MAKES SPARKS FLY.

A new product in the urban range, the SPARK is a first-rate choice for those looking for a comfortable, elegant glove that includes dynamic features inspired by sport-type gloves. Though it is clearly meant for urban use, it includes a honeycombed ERGO PROTECH® metacarpal protective shell hidden underneath stretch fabric that is textured for stylish flair. Its full-grain leather palm hosts a soft slider shell that will protect its rider in case of a fall, without hindering their grip on the controls. Slipping on the glove is now easier with the addition of a Lycra® inset underneath the velcro adjustment tab. Equipped with the Touch Screen™ system on the thumb and index finger, it allows you to zoom in on the screen of your smartphone or tactile GPS using two fingers. You can also easily match your SPARK to your everyday looks...which is more than enough to make the sparks fly each time you head out for a ride.

TECHNICAL FEATURES

01. Polyester fabric topside
02. Supple full-grain goat leather palm
03. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
04. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
05. Ultra-tough stretch Nylon fourchettes between the fingers
06. Protective foam reinforcements on ring and pinky fingers

FLOW WOMAN

RIDE THE CITY, WITH STYLE.

When you have to ride a motorcycle or scooter in the city, you might as well do it in style. The FLOW seeks to be elegant, comfortable, and practical for everyday wear. It's easy to slip on and off, due to the inviting shape of its wrist and its integrated adjustment tab. It's also protective, with its supple goat leather palm and honeycombed ERGO PROTECH® shell hidden underneath the tough, flexible stretch nylon that makes up its topside construction. It prioritizes suppleness and the smooth, sleek texture of its palm, which is effectively lined with a large leather and foam reinforcement on the hypothenar, to ensure a level of abrasion resistance that could be your saving grace if you take a spill. Equipped with the Touch Screen™ system on the index finger, the FLOW allows you to use your smartphone to find your way or keep in touch with your tribe. It's the perfect glove that's simple, tough, and affordable, to face the rigors of riding in the city. Available in black with bronze-colored trim for those who like an understated look, or in a graphic Skull & Roses version for fans of a more Rock-inspired look.

TECHNICAL FEATURES

01. Tough stretch nylon fabric topside
02. Supple full-grain goat leather palm
03. Lycra® fourchettes
04. 3mm-thick foam hypothenar reinforcement
05. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material

WFX DISTRICT WP WOMAN

A COCOON AGAINST THE COLD.

Designed for exploring the city in the winter on an everyday basis with nice, warm hands, the WFX DISTRICT WP introduces an innovative concept in terms of construction and thermal insulation. Most winter gloves have been made the same way for ages...To put it simply: Thick thermal insulation over the top of the hand, and a finer layer on the palm, all the way up to between the fingers. And here was the weak spot of this traditional construction. The cold ends up getting inside through the fourchettes (which is what the area between the fingers is called). FIVE has reinvented the fundamentals of thermal insulation using a new type of construction called THERMO+™, offering up to 20% greater heat retention, based on PRIMALOFT® insulation, the very best in the field. The concept is quite simple: thick insulation on the topside extends down between the fingers, whereas the thinner insulation is limited to the (flat) base of the palm and fingers. This implies reconsidering all the other elements in the glove, such as the external structure or the weatherproof membrane, in order to maintain perfect suppleness overall and a firm grip on the controls. It's when you ride in the cold that you understand the point of this Thermo+™ construction. The thicker, denser insulation in the fourchettes constitutes a much more effective thermal barrier and helps keep the hand's natural heat within the glove for longer. Beyond this innovation, the WFX DISTRICT WP stands out due to its composition that combines a supple, full-grain leather palm, topside construction in water-repellent Softshell fabric, and a ribbed cuff that keeps the warmth inside the glove. Supple and comfortable, it features all the elements that are common to FIVE gloves, with its ERGO PROTECH® shells and its Touch Screen™ system. The WFX DISTRICT WP is made for riders who, persuaded by the ribbed cuff concept (which is well-proven for insulation from the cold), are looking for a discreet, high-performance glove to face the city and its dangers, which are heightened in the winter.

EN 13594:2015

TECHNICAL FEATURES

01. Softshell fabric topside for greater comfort
02. Supple full-grain goat leather palm

MILANO EVO WP WOMAN

SIMPLE, UNDERSTATED,
AND EFFICIENT.

The Milano Woman, our weatherproof, breathable urban glove designed mainly for mid-season scooter riding, has been completely restyled in 2021. Fully updated, it still retains the characteristics that made its predecessor a real success. It features a protective shell concealed underneath nylon fabric and a leather palm, promising absolute protection. It also features a weatherproof, breathable 5_DRYTECH™ membrane, thus offering a layer of thermal insulation to protect its rider from the cold. Sleek and subtle, the new Milano Evo Woman retains its fashionable look, making it the perfect companion for elegant occasions, worn underneath a raincoat.

TECHNICAL FEATURES

01. Synthetic fabric (topside) and full-grain goat-leather (palm side) construction
02. PVC metacarpo-phalangeal protective shells underneath the fabric
03. Internal 5_DRYTECH™ weatherproof, breathable membrane
04. Thermal-insulating foam
05. Memory-foam hypothenar protection underneath the leather
06. Leather palm reinforcement
07. Closure system with synthetic leather and velcro tab
08. Touch Screen™ system for handling electronic devices (on the index finger)

MONTANA WOMAN

AN AUTHENTIC LOOK
FOR RIDING YOUR CUSTOM MACHINE
IN COLD WEATHER.

Because, as a real Custom aficionado, you enjoy taking your machine for a ride when it's cold outside, as conditions allow, in other words, as soon as the sun comes out (which makes it a lot more enjoyable...), it's better to be ready with the right equipment.

FIVE has thought of everyone who wants to ride in comfort despite the cold, and in style, at the controls of a motorcycle full of personality, and we've been inspired by 1930s flight jackets, from a time when aviators needed to spend hours in a freezing cockpit, wearing warm, durable garments.

The Montana will delight you, first with its quality, and the suppleness and toughness of its full-grain cowhide leather, specially selected and coated for a truly authentic look that covers the back of the hand and the palm. But the most impressive thing here is the feeling of warmth and comfort when you wear it, thanks to its synthetic rabbit fur lining around the wrist, and the polar-fleece internal lining throughout the hand, all the way down to the fingertips. There are two ways to wear the Montana: with the cuff rolled up or rolled down. The rolled-up position, which highlights the rabbit fur style lining, is secured with two snaps. And you simply need to fold the cuff down for it to cover or slip into your jacket, as you wish...or in case there's an unexpected rain shower. The Montana does not feature a weatherproof membrane (this isn't its intended purpose), but the robust coated leather will, most often, suffice to protect you from a short, light rain shower, just as a real aviator jacket would. We've paid close attention to the bold vintage style of this piece, as you can see in the embossed pattern that adorns the large nubuck palm reinforcement, synonymous with durability and extra protection in case you make contact with the ground. And we haven't forgotten the back of the hand: the small gusset on the wrist, and the three impressive top stitches, accentuate its resolute character. In terms of safety, again, the wrist closure promises to hold the glove perfectly in place if you take a spill. Whether you feel like Charles Lindbergh during his first crossing over the Atlantic aboard his plane, the Spirit of St. Louis, or you're just a Custom fan who likes to cruise in the fresh air, there's no doubt that you'll appreciate the qualities of the Montana. If Lindbergh were still flying today, he'd surely consider the Touch Screen™ system on the index finger and thumb, which is super-practical for handling a GPS indicator without taking off your gloves, an ingenious invention...

The Montana offers its rider a look that's both unique and authentic, along with cozy comfort, much appreciated when you're behind the wheel of a classic machine and it's cold (and dry) outside.

TECHNICAL FEATURES

01. Tough, coated cowhide leather construction (topside and palm)
02. Synthetic rabbit fur lining and 5_WARMTECH™ thermal insulation on the topside
03. Nubuck palm reinforcement
04. Adjustable cuff length with snaps
05. Embossed graphic ornament on the palm
06. Velcro wrist closure

KANSAS WOMAN

OUR MOST PROTECTIVE CUSTOM GLOVE.

The Kansas stands out as our most protective custom glove. Featuring a one-piece metacarpal protective shell inserted underneath the leather, and several reinforcements on exposed zones, it offers extra comfort and exceptional adjustability and touch sensitivity on the controls, due to, among other elements, its outer stitching. Its countless details, comfort gussets and topstitching, double closure with a zipper and leather and velcro flap, or its incredible level of finishing, make it a piece that leather lovers who want to look good will appreciate, without neglecting their safety. The Kansas marvelously combines classic style with a modern touch, since its index finger hosts the Touch Screen™ system that allows you to handle touchscreens without removing your glove.

TECHNICAL FEATURES

01. Total full-grain goatskin construction for suppleness (palm and topside), perforated for ventilation (topside)
02. One-piece PVC metacarpal-knuckle protective shell underneath the leather
03. Outer stitching on the fingers for optimal fit
04. Closure and adjustment system with zipper + velcro tab and on/off pull tab
05. Leather accordion comfort panels on fingers and thumb
06. Accordion leather + Elastic cuff for greater comfort
07. Hypothenar muscle protection with full-grain cowhide reinforcement panel and memory foam featuring embossed logo
08. Touch Screen™ system on index finger for handling touchscreens
09. Shape and size adapted to the feminine form

COLORADO WOMAN

BACK TO BASICS.

When it comes to all things Custom, we often only remember the essentials, the basics of motorcycling: a chassis, an engine, the controls, and two wheels are all we need to be happy. The same thing applies to the Colorado. In other words, when less truly becomes more...Less panels, less stitching, less protective elements, for greater comfort and control sensitivity. Inspired by a minimalistic approach that's straight out of Japan, the Colorado reminds us of the automotive gloves of the 1960s. The suppleness of full-grain leather invites you to ride your bike subtly and skillfully. Its second-skin smoothness, enhanced by its distinctive construction (with middle and ring fingers separate from the rest of the structure, and one long outer seam around the fingers), will make you feel like you're wearing nothing at all. But the sturdiness of the cowhide will save your hands if you happen to take a spill. Its adjustment tab adorned with a metallic grommet positioned over the wristband adds to the comfort and sleek look of the Colorado. This is a glove you'll choose more for its feeling of freedom than for the protection it provides, there no doubt about it.

TECHNICAL FEATURES

01. Full-grain cowhide construction (topside and palm), for durability
02. Quilted foam hypothenar reinforcement underneath the leather on the palm side
03. Distinctive construction, with the middle and ring fingers separate from the rest of its main structure
04. One long outer seam on the fingers and thumb, for optimal fit
05. Multiple leather perforations on the top of the fingers, for style and ventilation
06. Metallic grommet and FIVE Custom embroidered label
07. Comfort gussets on the inside of the wrist
08. Topside closure and adjustment system, featuring a leather and velcro tab
09. Shape and size adjusted to a woman's frame

MUSTANG EVO WOMAN

THE EVOLUTION
OF A BESTSELLER.

The Mustang used to represent the “little Custom leather glove that everyone likes”, with its minimalist aesthetic, ultra-compact size, and delicate comfort. Allow us to introduce the Mustang Evo, an optimized and updated version of this iconic style. We’ve totally redesigned it, using our new, exclusive palm-to-thumb construction, for a fit that’s even more precise and comfortable. It’s made in 100% full-grain goat leather, renowned for its suppleness and perforated for better airflow and sweat evaporation. The Mustang Evo has opted for a subtle look, with its protective shell hidden underneath the leather and its large insert adorned with a FIVE Custom logo embossed on the palm. Its closure system is now placed on the inside of the wrist, which makes for easier handling with a more intuitive feel and a tab that’s less likely to open unexpectedly. Safety has been reinforced by subtly lengthening the glove for better wrist coverage, without changing the “ultra-short” character that made the Mustang so successful. It’s been a logical, practical evolution, with the addition of the Touch Screen™ system that allows you to handle device touchscreens without taking off your gloves. The Mustang Evo is sure to go perfectly with any Custom or neo-retro machine or even with more conventional motorcycles, since it’s so alluring, with its universal, timeless style. Available in Men’s or Women’s versions.

TECHNICAL FEATURES

01. Perforated goat leather topside construction
02. Supple full-grain goat leather palm
03. TPR metacarpal-knuckle protective shell underneath the leather
04. Leather palm reinforcement
05. Embossed FIVE Custom logo
06. Touch Screen™ system on the index finger
07. New Velcro closure positioning underneath the wrist
08. Shape and size adapted to the feminine form

TFX2 WP WOMAN

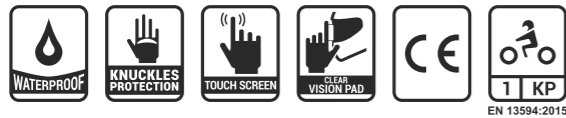

FOR FARSIGHTED
ADVENTURERS.

DRYTECH

The TFX2 is made for adventurers who leave nothing to chance. And, in particular, for those who demand a protective and comfortable glove that allows them to ride worry-free on any type of road, or face anything that Mother Nature can throw at them. Because when you set off for adventure, you may set off under bright sunshine, and finish the day in the driving rain. With its water-repellent, laminated fabric construction and its 5_DRYTECH™ weatherproof/breathable membrane, it offers unparalleled dryness, while allowing for a healthy evaporation of perspiration, which often happens when you ride hard on unpaved tracks. The TFX2 offers many details that are essential for long rides, like the Clear Vision Pad™ visor-cleaning system, or the Touch Screen™ electronic device-handling system, which allows you to find your way easily using your GPS or smartphone, without taking your glove off. And we haven't skimped on protection here, either, with its PVC shell and numerous reinforcements, on the topside, and its wide Kevlar® panel on the palm side, covering from the base of the hand all the way up to the hypothenar, under which three foam elements are inserted, for comfort. The palm also features a Digital PU reinforcement for impeccable handlebar grip when it rains. Comfortable, lightweight, and tough, both on falls and on rainstorms, the TFX2 will be there, ready to take on any adventure.

TECHNICAL FEATURES

01. Stretch, water-repellent fabric construction (topside), for dryness and comfort / Full-grain goat leather (palm), for suppleness
02. 5_DRYTECH™ weatherproof, breathable membrane
03. One-piece PVC metacarpo-phalangeal protective shell underneath the fabric / Window-panel construction
04. Soft TPR index and middle-finger knuckle protection
05. Index and middle-finger comfort gussets, with reflective inserts
06. Protective foam reinforcement on all knuckles
07. Forearm protection from a cuff with integrated memory foam
08. Wide Kevlar® reinforcement, from the base of the hand, all the way up to the hypothenar
09. Digital PU palm reinforcement, for better grip on the handlebars
10. Dual closure system (wristband and cuff) using an elastic strap and velcro
11. Adjustment tab concealed underneath a Kevlar® panel
12. Retro-reflective fabric on the wristband
13. Lycra®-style fourchettes (between the fingers)
14. Clear Vision Pad™ visor-cleaning system on the left-hand side
15. Touch Screen™ system (on the index finger) for handling electronic devices

TFX4 WOMAN

FOR NEW ADVENTURERS.

The TFX4 represents the entry-level style in the FIVE Trail-Adventure range...in every sense of the word! Accessible, because it's inexpensive, easy to wear, and because it meets all your basic needs for paved or dirt-road use. Lightweight, comfortable, and sleek, it is nevertheless quite protective, with its dual ERGO PROTECH® soft shell and wide Kevlar® panel covering nearly half of the palm, made of synthetic leather. Indeed, the TFX4 features no elements of animal origin, to the delight of vegan adventurers. A silicone print on the index and middle fingers improves your grip on the controls in wet conditions. The use of water-repellent fabric on the zone around the protective shells allows the water to slide over this area, in case you get splashed when you cross a river or get peppered by unexpected light rainfall. The TFX4 is, admittedly, not weatherproof, but this makes it even more versatile. This is a glove you'll reach for when you want to travel light, yet it has so many possible uses. From a ride on a sun-drenched road, to a jaunt on a gravel run in much less predictable circumstances, the TFX4 is always ready to head off for adventure.

TECHNICAL FEATURES

01. Mixed stretch, water-repellent fabric and 4-way Spandex™ construction (topside)
02. Synthetic leather palm
03. Dual soft-TPR ERGO PROTECH® metacarpo-phalangeal protective shell
04. Wide Kevlar® reinforcement, from the base of the hand all the way up to the hypothenar
05. velcro closure tab and base of the thumb in Airprene® fabric, offering both support and ventilation
06. Lycra®-style fourchettes (between the fingers)
07. Touch Screen™ system (on the index finger) for handling electronic device screens
08. Anti-slip silicone print on the index and middle fingers, for better grip on the controls
09. Deflector flap in retro-reflective fabric on the top of the hand
10. Heat-welded FIVE sonic logos that act as protective elements

HG3 EVO WP WOMAN

THE FULLY SYNTHETIC HEATED GLOVE.

The HG3 EVO WP is an entry-level style in our heated glove range. It nevertheless enjoys the benefits of the same heating technology and same fundamentals as the higher-end styles (Primaloft® thermal insulation, 5_DRYTECH™ weatherproof, breathable membrane, Dual Control adjustment system, connectivity...), but its simplified outer construction, which is fully synthetic, keeps its price reasonable. The HG3 Evo WP features all the safety (ERGO PROTECH™ protective shells) and comfort (Touch Screen™, Clear Vision Pad™, etc.) elements that are typical of new-gen FIVE gloves.

So, you may choose the HG3 Evo WP because it's financially attractive, or because it resonates with your values, since no elements of animal origin have been used in its composition...or for both reasons! In addition, women will appreciate having a version of the HG3 Evo WP that's made for their shape, size, and sense of good taste. Available in men's or women's versions.

WFX CITY EVO GTX WOMAN

THE SURE BET,
IN A LONG VERSION.

The WFX City Evo GTX Long Woman is the ideal glove to face the winter with elegance, both in the city and the suburbs, and to take on middle-distance road trips with peace of mind. Its topside construction in Softshell fabric is both windproof and water-repellent. Its leather palm featuring a soft slider and honeycombed ERGO PROTECH® metacarpal protective shells hidden underneath the fabric offer impeccable protection. Weatherproofing is ensured by a breathable GORE-TEX® membrane, the benchmark name in the field. As for thermal insulation, the WFX City Evo GTX introduces an innovative concept in terms of construction and thermal insulation. Most winter gloves have been made the same way for ages...To put it simply: Thick thermal insulation over the top of the hand, and a finer layer on the palm, all the way up to between the fingers. And here was the weak spot of this traditional construction. The cold ends up getting in through the fourchettes (which is what the area between the fingers is called). FIVE has reinvented the fundamentals of thermal insulation using a new type of construction called THERMO+™, offering up to 20% greater heat retention, based on PRIMALOFT® insulation, the very best in the field. The concept is quite simple: thick insulation on the topside extends down between the fingers, whereas the thinner insulation is limited to the (flat) base of the palm and fingers. This implies reconsidering all the other elements in the glove, such as the external structure or the weatherproof membrane, in order to maintain perfect suppleness overall and a firm grip on the controls. It's when you ride in the cold that you understand the point of this Thermo+™ construction. The thicker, denser insulation in the fourchettes constitutes a much more effective thermal barrier and helps keep the hand's natural heat within the glove for longer. Add to this the dual (thumb and index finger) Touch Screen™ system for handling electronic devices, the Clear Vision Pad that allows you to wipe off the visor of your helmet while you ride, the dual closure system that includes the Over Size Cuff to make it easier to fit the cuff over your jacket's sleeve, and you have a sure bet to face the city in the wintertime.

TECHNICAL FEATURES

01. Softshell fabric topside for greater comfort
02. Supple full-grain goat leather palm
03. GORE-TEX® breathable and weatherproof membrane
04. Innovative FIVE Thermo+ Insulation offering 20% more insulation, includes PrimaLoft® Silver 200 g on topside and 60 g Gold Grip control in palm
05. ERGO PROTECH® one-piece metacarpal-knuckle protective shell with internal honeycombed structure, hidden underneath material
06. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
07. Over Size Cuff System: adjustable cuff system to adjust cuff around jacket's sleeve. Includes a weatherproof YKK zipper
08. Velcro wrist closure.
09. Reflective fabric on pinky finger
10. Touch Screen system™ on index finger and thumb
11. Clear Vision Pad™ on the left hand for wiping helmet visor or goggles
12. Copper-colored metal logo on topside
13. Shape and size adapted to the feminine form
14. CE KP1

WFX SKIN EVO GTX WOMAN

THE NEW ALL-LEATHER
URBAN & TOURING
GORE-TEX® WINTER GLOVE.

The WFX Skin Evo GTX represents an alluring evolution of the WFX Skin GTX, our bestselling urban/suburban winter glove. Though its predecessor was essentially designed for city riders, the WFX Skin Evo GTX wants to be more versatile. It widens the riding spectrum and will also delight Touring fans looking to have an understated, comfortable, and elegant leather glove to face the winter.

Made mostly of full-grain Napa goat leather, renowned for its extreme suppleness, with the addition of a few stretchy Softshell fabric inserts for ease of movement and comfort, it aims to be protective, in every sense of the word, in the city or on the road. Its GORE-TEX® weatherproof, breathable membrane and PrimaLoft® Gold water-repellent thermal insulation offer the best possible guarantee that you'll stay dry and warm in bad weather; this is why we've opted to use these premium elements on the WFX Skin Evo GTX. And to stop any raindrops from getting inside your sleeve, the cuff is now covered with Taslan™ water-repellent fabric, for truly optimized weatherproofing.

In terms of safety, the WFX Skin Evo GTX has naturally adopted the latest generation of FIVE ERGO PROTECH® ergonomic protective shells, including a semi-soft, honeycombed shell on the palm, to protect you in case you take a spill. The topside shell is simply concealed underneath the leather, for a more subtle look. The dual-closure system also promises perfect fit and support. We've obviously also offered you the ability to handle your touch-screen devices and wipe off your visor while you ride with the WFX Skin Evo GTX, which features the Touch Screen™ and Clear Vision Pad™ systems.

Discretion and protection (against the cold, rain, and any falls) are the key concepts that we had in mind when we developed the WFX Skin Evo GTX.

As you can see, here, we're in the presence of a refined and comfortable glove that will take you elegantly and effectively from the city during the week to the road on the weekends, all winter long. Available in men's or women's versions.

TECHNICAL FEATURES

01. Napa goat leather + softshell topside construction
02. Full-grain goat leather palm
03. GORE-TEX® weatherproof/breathable membrane
04. PrimaLoft® Gold 200 g thermal insulation on the topside
05. PrimaLoft® Grip Control 60 g thermal insulation on the palm
06. ERGO PROTECH® metacarpal-knuckle protector
07. ERGO PROTECH® honeycomb palm slider
08. Dual Closure System
09. Clear Vision Pad™ on the left hand
10. Touch Screen™ system on the index finger and thumb
11. Shape and size adapted to the feminine form

WFX4 WP WOMAN

EFFECTIVE YET AFFORDABLE,
THE NEW WINTER GLOVE
FOR EVERYONE.

The WFX4 WP is our new entry-level offering and seeks to make the key features that make winter gloves effective in the city or on short rides, affordable and accessible to all (men, women, and children)...with quality fit as a bonus (the famous FIVE fit)! It features 170 g 5_WARMTECH™ thermal insulation on the topside of the hand, which is lined with insulating foam on the palm side, to effectively protect your hand from the cold. And since it's better to be prepared for humidity or rain, which are more common in winter, the WFX4 WP also has a waterproof, breathable 5_DRY-TECH™ membrane, developed specifically by our R&D department for motorcycle use, which is also partially bonded to the palm for optimal grip on the handlebars and perfect fit. Its "no-leather" construction (topside construction in water-repellent Softshell fabric and the palm in Amara synthetic fiber) makes it a 100% vegan product, which should delight anyone who cares about animal welfare. Like its more advanced siblings, the WFX4 WP offers the latest-generation ERGO PROTECH® ergonomic shells, developed by FIVE, ensuring excellent protection without hindering your movements. Ultra-practical, the Touch Screen™ system on the index finger allows you to use your GPS or smartphone touchscreen without taking your gloves off.

As a main pair for budget-conscious riders, or an extra pair to keep in your top case, the WFX4 WP is an interesting and affordable base product to help you keep riding your motorcycle or scooter in the winter. There's no doubt about it: it's the one to take out as soon as temperatures start to drop.

TECHNICAL FEATURES

01. Softshell topside construction
02. Amara synthetic leather palm
03. 5_DRYTECH™ weatherproof, breathable membrane
04. 5_WARMTECH™ 170g thermal insulation on the topside
05. Insulating foam on the palm
06. ERGO PROTECH® metacarpal-knuckle protector
07. ERGO PROTECH® palm slider
08. Velcro wrist closure

OFF ROAD

DON'T CHOOSE
TOTAL LOOK.
CHOOSE TOTAL
PERFORMANCE.

MXF RACE - Red

In motocross or off-road, most riders match their gloves to the rest of their look, and consider gloves as just an extension of their jersey / pants outfit.

You just have to try on a FIVE glove to understand all the benefits of wearing a product designed and made for effectiveness and performance, not just for the look. FIVE gloves provide both improved steering sensitivity, and help prevent blisters, sworn enemies of any pro or amateur rider. They significantly enhance the joy of riding, and, therefore, the rider's level of performance. Just as we don't necessarily match our helmet or our boots to the rest of our outfit, the most demanding riders know that only a glove specialist can offer them the best MX or Off-Road glove. Wearing FIVE gloves is no faux pas... on the contrary, it's a sign that you pay attention to every single detail. And that alone gives you a serious edge over the competition.

MXF RACE

THE NEW-GEN MX GLOVE.
ABSOLUTE CONTROL.

FIVE revolutionized motocross gloves with its MXF PRORIDER that literally broke all the rules. Establishing itself as an absolute benchmark in comfort and performance, it was adopted by many pro and amateur riders alike. Now that it's time to replace it, FIVE is here with not one, but two offerings (the MXF RACE and MXF1 EVO). Here's the first of them: the MXF RACE. Designed for riders with a fluid, light-as-air style, who love being one with their machine and reject the idea of using any type of palm padding so they can better feel the controls and read the terrain, it's meant to be used with Soft grips (preferably). Because, just as you don't use the same level of tire firmness for every kind of terrain, it's important to select your grips carefully depending on your riding style or your preferences (and to match it with the right pair of gloves). The MXF RACE is impressive, because it offers the sensation of wearing nothing at all. It's like a second skin with its Nanofront™ palm, an ultra-thin, absorbent Japanese material that offers amazing grip, which FIVE began using in motocross gloves with the MXF PRORIDER. Its ultra-thin, ultra-tough stretch nylon topside construction and seamless, heat-fused wrist construction help make it very supportive and comfortable overall. Its fourchettes (finger gaps) in 2:2 Mesh honeycombed fabric and its laser-cut perforations located at strategic points ensure perfect air circulation. What's surprising about the MXF RACE is the level of precision you feel on the handlebars and the quality of each detail that makes it. Such as the anti-blister gel pad at the point of contact with the handlebars, a solution that's far more effective and comfortable than using "donuts". Suffice it to say that the MXF RACE is already the top choice for the pro riders who participated in its development. It's what will make the difference, without a doubt, leading you all the way to victory.

*Focus: Performance and precision
Use with Soft grips is strongly recommended.*

TECHNICAL FEATURES

01. Ultra-thin stretch nylon topside
02. Japanese Nanofront palm/ 0.4 mm thickness for optimum feel at the controls
03. Fused, stitch-free variable multilayered wrist construction
04. ERGO FIT fourchettes in 2:2 Mesh
05. Internal anti-blister gel pad on thumb
06. Velcro wrist closure
07. Laser perforations on palm, topside, and thumb to evacuate perspiration
08. Silicone print on palm, index, and middle fingers for better grip
09. Vegan Friendly
10. Closed-track use only

MXF1 EVO

THE NEW-GEN MX GLOVE.
ABSOLUTE COMFORT.

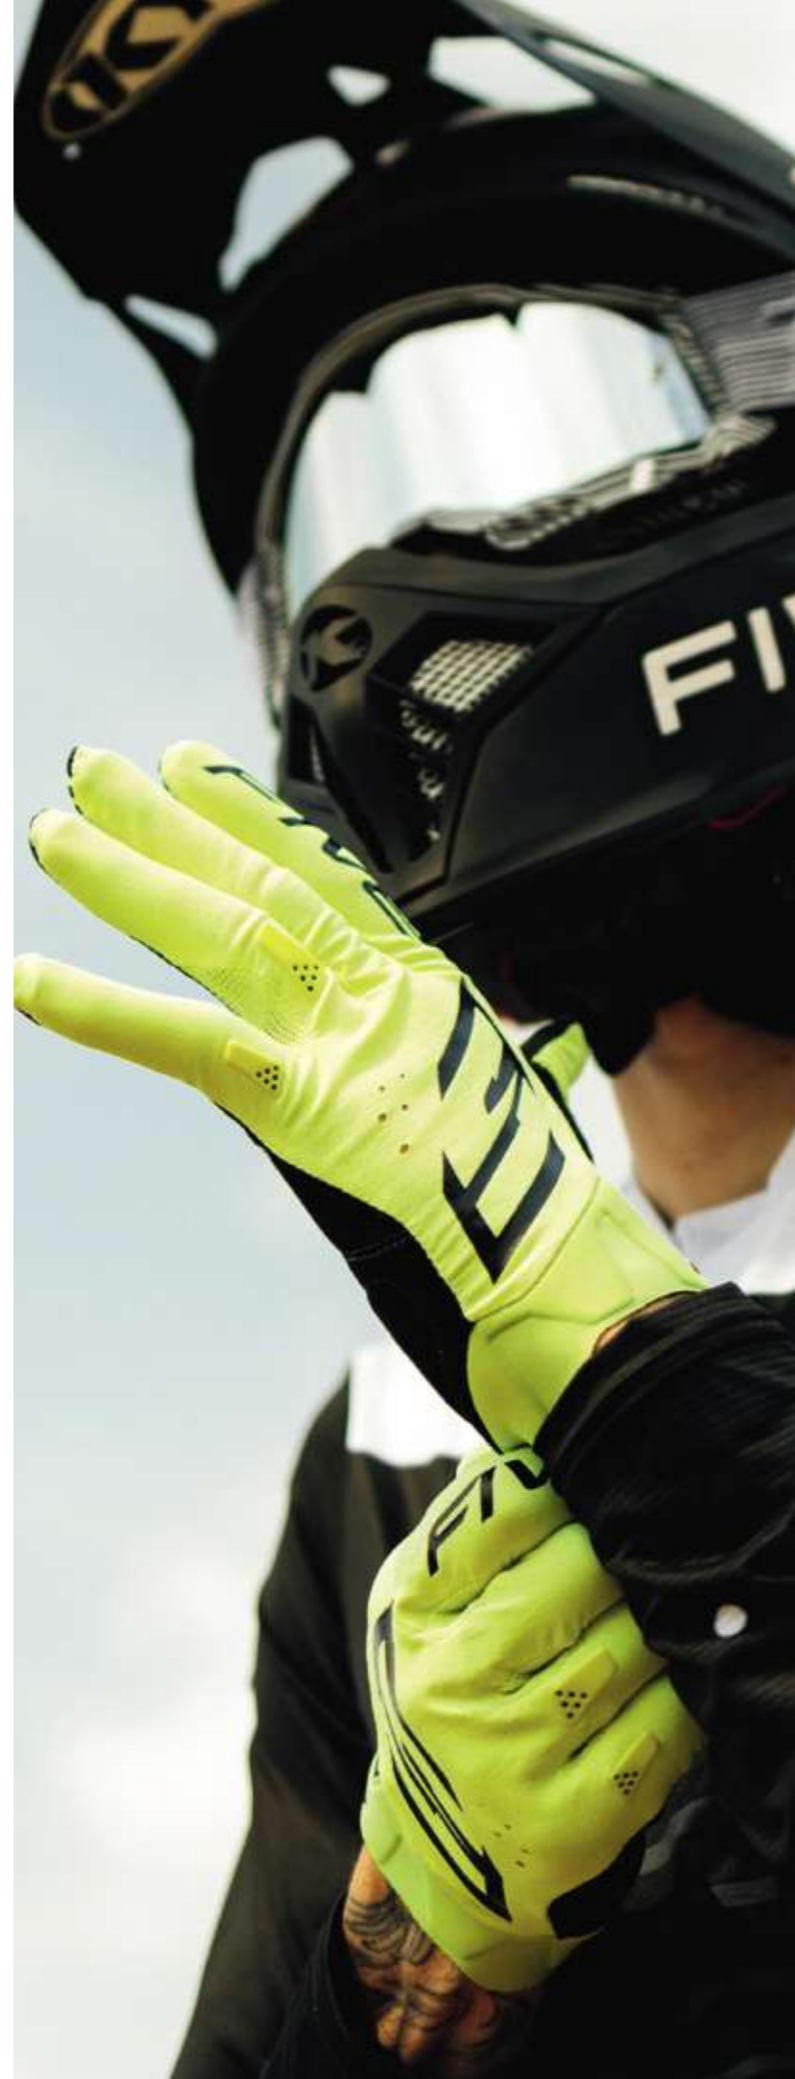

FIVE revolutionized motocross gloves with its MXF PRORIDER that literally broke all the rules. Establishing itself as an absolute benchmark in comfort and performance, it was adopted by many pro and amateur riders alike. Now that it's time to replace it, FIVE is here with not one, but two offerings (the MXF RACE and MXF1 EVO). Here's the second of them: the MXF1 EVO. It's made for riders looking for comfort and who appreciate being able to count on padded palm elements, because they use Medium or Hard grips or for use on particularly tough terrain. Because, just as you don't use the same level of tire firmness for every kind of terrain, it's important to select your grips carefully depending on your riding style or your preferences (and to match it with the right pair of gloves). The AX Suede Cinco® synthetic suede leather palm of the MXF1 EVO hosts an anti-blister pad in micro-Bemberg that limits friction on hard handlebars or from aggressive terrain. The thumb features a gel pad that prevents blister formation at the point of contact with the handlebars, a much more effective and comfortable solution than using "donuts". While the ultra-thin stretch nylon topside is laser micro-perforated to allow perspiration to evaporate, the wrist, made up of an embossed Neoprene™ structure that includes a Velcro® adjustment tab, offers impeccable support. The MXF1 EVO: the top choice when you're aiming for victory when conditions become challenging and aggressive for your palms (or when you're using hard grips).

*Focus: Comfort and/or challenging conditions
Recommended for use with Medium or Hard grips.*

TECHNICAL FEATURES

01. Ultra-thin stretch nylon topside
02. AX Suede Cinco® synthetic leather palm
03. Embossed Neoprene™ wrist for enhanced comfort and fit
04. ERGO FIT fourchettes in 2:2 Mesh
05. Anti-blister pads in gel on thumb and in Micro-Bemberg on palm
06. Velcro wrist closure
07. Laser perforations on palm, topside, and thumb to evacuate perspiration
08. Silicone print on palm, index, and middle fingers for better grip
09. Vegan Friendly
10. Closed-track use only

MXF2 EVO

THE MX GLOVE
WITH A FLEX WRIST.

The MX range from FIVE, more comprehensive than ever, offers the MXF2 EVO, a glove that will be ideal for many competitive situations or for training. It's made for riders who want a glove that's easy to slip on because it features a stretch wrist cuff without any adjustment tab. Support is provided by its embossed Neoprene™ structure. Its Clarino palm is perfectly smooth without the slightest reinforcement or seam, yet silicone prints ensure optimal grip on the handlebars and controls. It's micro-perforated for enhanced perspiration evaporation. Its topside in stretch Twill Span fabric is also perfectly smooth, without the slightest additional element, except for a sonic FIVE logo on the solid-colored versions, which is absent on the graphic versions. The MXF2 EVO focuses on simplicity and effectiveness, for complete mastery in modern riding.

TECHNICAL FEATURES

- 01. Twill Span stretch fabric on topside
- 02. Perforated Clarino synthetic leather palm
- 03. Embossed Neoprene™ wrist for enhanced comfort and fit
- 04. ERGO FIT fourchettes in 2:2 Mesh
- 05. Thumb reinforcement
- 06. Silicone print on palm, index, and middle fingers for better grip
- 07. Vegan Friendly
- 08. Closed-track use only

MXF3 EVO

TO PROTECT YOURSELF FROM SPLATTER.

Though many MX riders choose the most minimal gloves possible, there are certain situations when it's best to protect yourself from splatter. On rocky terrain or even in the mud, the MXF3 EVO is effective due to its large, enveloping TPR reinforcement that fully covers your fingers, down to the metacarpals. The suppleness of this element, paired with the Q-Span and Twill Span stretch fabric on the topside, will leave you with total freedom of movement. This large signature TPR reinforcement makes all the difference. It will stop your performance from being affected by the small, sharp impact of any pebbles thrown onto you by your competitors. The palm of the MXF3 EVO in AX Suede Cinco® is reinforced with a large, perforated synthetic leather panel for optimal grip on the handlebars and for enhanced toughness. The inside of the palm hosts an anti-blister pad in micro-Bemberg, which is also present on the thumb at the point of contact with the handlebars. The Pull'N'Ride tab and the velcro adjustment tab allow for an ultra-precise fit that leaves you unhindered at the wrist level. The MXF3 EVO lets you stay focused on your riding, so you can go the distance (and the extra mile) without wavering, as soon as the terrain seems like a battlefield.

TECHNICAL FEATURES

01. Stretch Twill Span + Q-Span fabrics on topside
02. AX Suede Cinco® synthetic leather palm
03. Lycra® and 2:2 Mesh fourchettes
04. Palm and thumb reinforcements in perforated synthetic leather, and Micro-Bemberg anti-blister pads
05. Splatter-guard ERGO PROTECH® TPR reinforcement on the entire topside of the hand
06. TPR + velcro tab closure system and Lycra® gusset
07. Silicone print on index and middle fingers for better grip
08. Vegan Friendly
09. Closed-track use only

MXF4

THE MOTOCROSS GLOVE THAT GOES BACK TO BASICS.

The affordable motocross glove that isn't weighed down with anything extra. Polymesh topside construction, AX® Suede synthetic leather palm, Lycra® finger contours, palm reinforcement, closure with a TPR and velcro tab, silicone print on the index finger for better handlebar grip... nothing gets in the way of the rider's movements. The MXF4 is sure to satisfy those who believe that a motocross glove should be kept to an absolute minimum for it to take things to the max.

TECHNICAL FEATURES

- 01. Polyester Mesh construction (topside) / AX® Suede synthetic leather (palm)
- 02. Logo and graphic sublimated prints
- 03. Palm reinforcement underneath synthetic leather
- 04. Fourchettes (finger contours) in Lycra®
- 05. TPR + velcro tab closure system
- 06. Silicone print on the inside of the index finger for good handlebar grip

NEO

THE NEW "NEO" GLOVE FOR WINTER TRAINING.

The NEO gets its name not just from its newness, but also from the small glove known as a "Neoprene™" that you should always have in your bag for winter motocross training or cool morning/evening bike rides. It's not, strictly speaking, made of Neoprene™. Its Lycra® Fleece construction feels even more pleasant and comfortable than simple Neoprene™, because it's thinner and less constricting. It acts as a slim barrier against the wind and cold, while retaining a flexibility that leaves your movements, and your precision at the controls, unhindered. Beyond insulating and retaining your hand's natural warmth, the NEO proves its effectiveness with a number of elements, such as the silicone prints on the inside of the palm, index, and middle fingers, for optimal grip on the controls, and its Clear Vision Pad™, to wipe off your face mask, or Touch Screen™ systems, for handling electronic devices (smartphone or GPS). With the NEO, riding off-road in winter and braving the elements will swiftly become a real pleasure. Though it's designed for training, some riders will make it their secret weapon for competitions under extreme conditions.

TECHNICAL FEATURES

01. Lycra® Fleece construction, to block out the cold and wind (topside)
02. AX® Suede Cinco synthetic leather that combines comfort and excellent grip (palm side)
03. Silicone prints on the index and middle fingers and on the palm, for grip on the controls
04. Embossed Neoprene™ wristband with integrated velcro adjustment tab
05. Outer part of the thumb in Clear Vision Pad™ micro-terry foam, for cleaning off your face mask
06. Fourchettes (between the fingers) in water-repellent Lycra®
07. Pull'N'Ride on/off tab integrated into the wristband
08. Touch Screen™ system (on the index finger) for handling electronic devices
09. FIVE embossed or retro-reflective logos
10. Vegan Friendly
11. Closed-track use only

E2

THE GLOVES SPECIFICALLY DESIGNED FOR RECREATIONAL AND COMPETITIVE ENDURO. CE CERTIFIED!

We proudly present the result of our collaboration with 9x Enduro World Champion Steve Holcombe, and 2019 E2 World Champion Loïc Larrieu, after many months in development: the E2, a glove designed specifically for Enduro, both recreational and competitive. It offers all the performance of a motocross glove, combined with a superior level of protection that's essential in the great outdoors. This includes branches and rocks that can sometimes be tough on riders...because you're not always protected by hand-guards, particularly if you take a spill. So, we've included just the amount of reinforcements and protection you need at strategic points, so you maintain total freedom of movement. This is what we're talking about with the dual-shell ERGO PROTECH® in soft TPR, which'll protect you from tree trunks or rocks, but is also nearly undetectable when you're at the controls. We've really focused on ventilation, with mesh fabric on the inner half of the hand, while we've kept the tougher materials on the outer half that's more exposed to all kinds of contact (with trees, thorns, rocks, etc.). And since Enduro means you spend long hours at the controls, navigational contact has to be comfortable. The E2 is thus equipped with a palm in AX® Suede Novobuck™, a material that provides excellent grip and is both durable and comfortable, along with 2 mm foam rubber pads on the palms and 3 mm on the thumbs. You get the picture: with the E2, FIVE offers an Enduro-specific glove that's bound to set the standard...

TECHNICAL FEATURES

01. Topside: Mixed construction, with ventilated mesh on the inner side / extra-tough 4-way-stretch polyester on the outside / Palm: AX® Suede Novobuck™ / hypothenar and control contact-point reinforcement in synthetic leather / 2 mm foam rubber reinforcements on the palms / 3 mm foam rubber pads on the thumbs
02. Dual ERGO PROTECH® protective shells in soft TPR, virtually undetectable
03. Mini-protective shells in TPR on the fingers + 3 mm foam rubber reinforcements on the ring and little fingers
04. 5 TPR Sonic heat-sealed protective logo
05. FIVE ErgoFit construction for optimal fit and freedom of movement
06. Synthetic leather reinforcement on the edge of the hand, up to the radius
07. Silicone print on the inside of the fingers for optimal grip
08. Clear Vision Pad™ visor cleaning system on the left-hand side
09. Touch Screen™ system (index finger) for handling electronic devices
10. Adjustable tab closure integrated into the mesh and velcro fabric structure of the glove
11. Vegan Friendly
12. CE KP1

OFF-ROAD ENDURO

E3 EVO

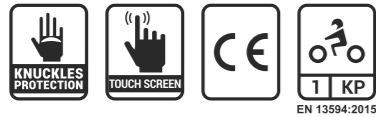

THE FIVE ENTRY LEVEL ENDURO GLOVE,
CE CERTIFIED!

The E3 style thus gives you access to a FIVE Enduro range that keeps expanding. CE certified for open-road use, as certain regulations require, the E3 EVO features a metacarpal-phalangeal protective shell in soft TPR, concealed under mixed Spandex™ / Polymesh construction. While this shell promises protection in case of contact with pebbles, branches, or if you take a tumble on the open road, these two materials give the E3 EVO extreme flexibility, so that nothing hinders the mobility of the rider's hand. A synthetic leather reinforcement ventilated at the point of contact with the handlebars seeks to reduce the risk of thumb blisters. Similarly, the palm in AX® Suede Novobuck is reinforced on the hypothenar muscle with a synthetic leather inset and features a silicone print for optimal grip on the controls. Slip-on and closure are made easy with the inclusion of a pull tab (on the palm side) and an adjustable velcro flap integrated into the glove's construction. The E3 EVO proves to be extremely lightweight despite its one-piece protective shell, and even includes a Touch Screen™ system on the index finger, allowing you to handle your device screens (smartphone or GPS). It's all more than enough to satisfy Enduro lovers and ramblers who are exacting... but frugal.

TECHNICAL FEATURES

01. Sublimated Spandex™ and Polymesh construction (topside) / AX® Suede Novobuck (palm)
02. Soft TPR metacarpal-phalangeal protective shell concealed under fabric
03. Soft TPR phalangeal mini protective shell (index, middle, ring fingers)
04. Synthetic leather reinforcement on the hypothenar muscle
05. Synthetic leather thumb reinforcement at the zone of contact with the handlebars
06. Silicone print on the palm to enhance grip
07. Fourchettes (finger contours) in Heavy Lycra® to boost flexibility and airflow
08. Closure system with velcro flap and pull tab
09. Touch Screen™ system for using device screens (GPS, smartphone)
10. Vegan Friendly
11. CE certified (open-road use)

E-WP

THE OFF-ROAD GLOVE TO HELP YOU FACE THE WIND AND RAIN. CE CERTIFIED!

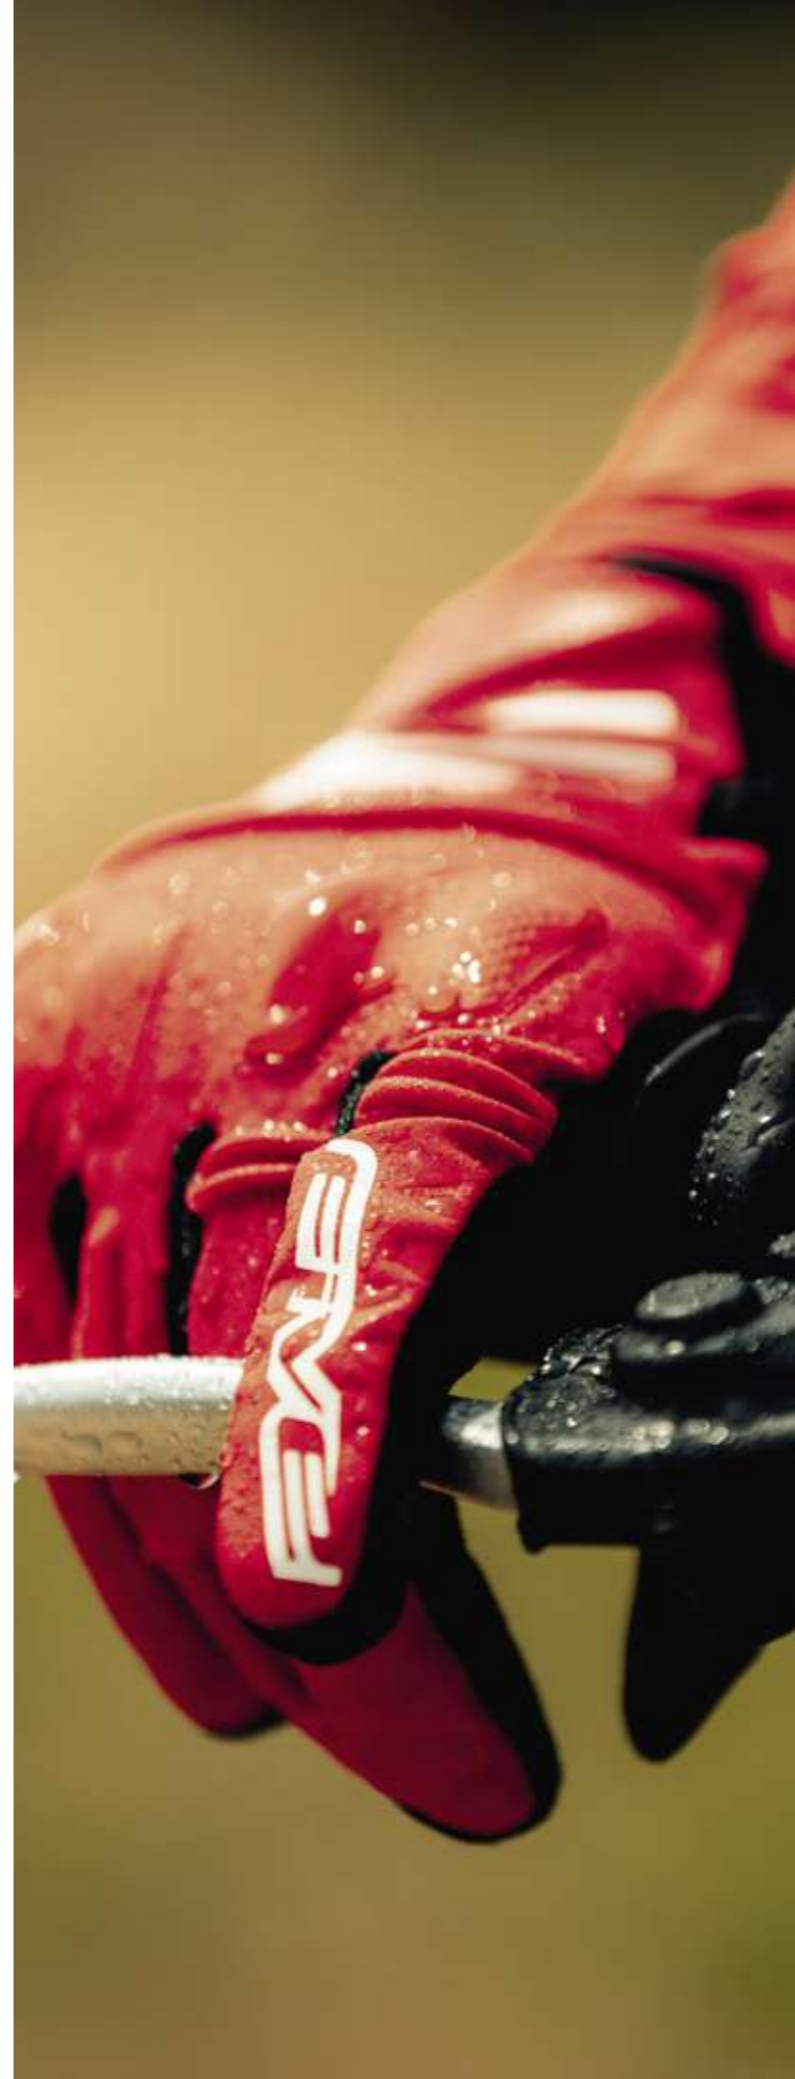

Because off-roading (Enduro, quad, ATV) is fun year-round, including when the weather's bad, you have to be equipped and ready for anything. FIVE is proud to introduce the E-WP, an off-road glove that features a 5_DRYTECH™ breathable, weatherproof membrane and a water-repellent stretch outer shell. This glove is truly effective and comfortable when you have to face the wind and rain, which is sometimes a reality when you're on long rides in the great outdoors. Made from tough, durable materials that are moisture- and abrasion-resistant, the E-WP should always be in your belt bag or backpack when the weather's likely to take a turn for the worse, so you can keep on rolling with your hands dry, at the first sign of rain. Its synthetic leather AX® Suede embossed palm, for enhanced grip on wet, or even mud-splattered, controls, offers excellent navigational control and significant comfort, especially when hours of riding seem endless in the pouring rain. With its Touch Screen™ system and Clear Vision Pad™, you'll always be able to use your GPS or wipe off the outside of your visor, to help you find your way. You may end up exhausted and soaked from head to toe...but your hands will stay nice and dry inside the E-WP.

TECHNICAL FEATURES

01. Topside: Water-repellent stretch fabric construction / Palm: AX® Suede synthetic leather, embossed for perfect grip in wet conditions
02. 5_DRYTECH™ breathable, weatherproof membrane, partially bonded on the palm side
03. Dual ERGO PROTECH® protective shell in soft TPR, nearly undetectable
04. Synthetic leather reinforcement on the thumbs
05. Fourchettes (bands between the fingers) in Heavy Lycra®
06. Pull'N'Ride™ pull tab
07. TPR and velcro tab closure
08. Lycra® wrist gusset that keeps dirt from getting into the glove
09. Internal Bemberg™ comfort lining
10. Comfort gussets on the top of the hand and on the index and middle fingers
11. Foam reinforcements on the ring and little fingers
12. Clear Vision Pad™ visor cleaning system on the left-hand side
13. Touch Screen™ system for handling electronic devices (index finger)
14. Vegan Friendly

5 TECHNICAL GLOSSARY

All brands or products mentioned in this glossary are the property of the firms, suppliers, or partners of FIVE Gloves or of its manufacturing units, and are mentioned for informational purposes.

5_DRYTECH™ – Weatherproof / breathable and windproof membrane developed by FIVE specifically for two-wheeled vehicles. Allows perspiration to evaporate, while it stops raindrops from getting into the glove. Attached to the external structure and the lining of the glove with adhesive strips, so that it really stays put.

5_WarmTech™ – Specific 3-D polyester fiber, developed by FIVE, based on our experience in bike riding, to thermally insulate and protect from the cold. Placed between the breathable, weatherproof membrane and internal lining of the glove, this synthetic fiber traps the most effective of all insulating: air (and the natural heat from the hand)! Available in different densities and weights adapted to the different areas of the glove.

AirGO PROTECH® – A protective shell crafted by FIVE, with a trade-marked design, offering superior ergonomic and protective qualities, which includes an air inlet to promote ventilation of the hand.

Airprene® – Ultra-stretch polymer foam that offers excellent support, with a microcellular structure and perforations that ensure optimal air and moisture flow. We use it most often for the support and breathability it provides on the wristband.

Anti-twist ties – An element connecting the little and ring fingers, to stop the little finger from being x away from the hand in the event of a fall. Made from leather, in an accordion shape (a FIVE innovation) on our Racing gloves, in order to limit the range of motion without being constricting.

AX® Suede – A synthetic material made from polyester microfiber. An alternative to suede leather that offers the advantage of being machine washable. Designed to enhance functions such as dexterity, flexibility, skid resistance, moisture management, etc. Comes in many varieties, with many possible applications.

Bemberg™ / Micro Bemberg™ – An artificial textile fiber obtained from natural materials, including cellulose from a variety of botanical sources, and featuring a silky texture, used as a lining inside gloves in order to offer a pleasant and comfortable contact zone.

Carbon PVC – A protective element consisting of a carbon sheet between two layers of PVC, which gives it an optimal firmness/flexibility ratio. We often include a carbon PVC shell at the hypothenar, which we also call a palm «slider».

Carbon Thermoset – Thermoset carbon passed through an autoclave, originating from Italy. Used in aeronautics, Formula 1, and Moto GP. Used in the protective shells of our high-end Racing style, the RFX Race. Offers high skid resistance, extremely light weight, and an exceptional level of protection.

Cat Eye™ – A polyester-based synthetic fabric with a structured upper surface.

Clarino® – A synthetic material that emulates natural suede leather, used on the palm side for its comfort, skid resistance, and excellent grip. Machine washable.

Clear Vision Pad™ – A micro-terry cloth fabric panel that allows you to wipe off your helmet's visor or mask while riding. (A FIVE brand name)

CONNECTION KIT – Optional cable-connection kit that allows for the connection of FIVE HG heated gloves to the battery or cigarette lighter socket on the motorcycle.

Cordura® Stretch – Cordura®. A heavy-duty fabric that offers elastic qualities in its Stretch version.

DUAL CONTROL – Heating control system using a single button (implemented on the new generation of FIVE HG heated gloves) that allows for simultaneous control of the heating level in both gloves with a single button on the right hand, since both gloves are wirelessly connected.

Embossed – A textured effect that highlights a decorative element (logo or other).

ERGO PROTECH® – A protective shell crafted by FIVE, with a trademarked design, that can be visible or concealed under fabric or leather, offering superior ergonomic and protective qualities. Available in one-piece or double versions. The single-shell TPR versions include an internal honeycombed structure for optimal shock absorption. (A FIVE brand name)

Gore-TEX® GRIP Fully bonded – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Fully molds to the shape of the palm for exceptional user comfort and enhanced touch sensitivity.

Gore-TEX® GRIP Partially bonded – A weatherproof / breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Partially molds to the shape of the palm, so that it really stays put.

Gore-TEX® – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge.

GUTTERMANN® – A stitching thread originating from Germany. Used on our high-performance gloves due to its superior tear resistance and ability to limit the risk of cuts in the event of an accident.

HG / Heating Technology – Heating glove. Heating technology. A glove that is heated by resistors and either a self-contained battery or mini-cigarette lighter power cord. It's possible to adjust the level of heat by favoring the perceived temperature or the battery life. (A FIVE brand name)

HIPORA® – A weatherproof/breathable membrane offering excellent weather-resistance and breathability.

Hypothenar – A part of the hand that includes a group of muscles that govern the movements of the little finger.

KEVLAR® – A synthetic fiber that is extremely resistant to tearing, perforation, and skidding, made from aramid resin. This high level of toughness makes it a material used in, as one example, the manufacture of bullet-proof vests.

KEVLAR® stretch – Kevlar® fiber featuring elastic qualities.

Leather / Goat – Leather used to make our gloves, due to its superior suppleness.

Leather / Cowhide – Leather used to make our gloves, due to its superior toughness and durability.

Leather / Digital – Leather whose surface is laser-embossed to create a multitude of tiny prints to enhance grip on the controls in wet weather.

Leather / Full-grain – Leather that has its upper layer intact, thus featuring all the natural irregularities of the animal hide.

Lycra® – A synthetic fiber with elastic properties. We use it in the areas that require perfect elasticity, such as finger contours or the wrist opening.

Memory foam – A material made of viscoelastic foam that recovers its original shape when it is deformed. We use it in the zones that require impact absorption or as a comfort element.

Mesh Fabric – A honeycombed fabric that eases airflow.

Mesh Fabric 3D – A honeycombed fabric that eases airflow, with cells that feature a bulky texture.

Metacarpals – The set of bones that form the structure of the palm of the hand, located between the fingers and the wrist.

Nanofront® – A premium material from Japan, introduced by FIVE within the palm of our high-end motocross gloves, chosen for its exceptional anti-skid, slimness, suppleness, moisture absorption, and thermal barrier properties. Made up of fibers measuring 700 nanometers in diameter.

Nubuck – A leather finish that features a velvety effect obtained through scraping / polishing of its upper surface.

Over Size Cuff – A zipper adjustment system that allows you to expand your glove's cuff so that it more easily covers your jacket sleeve.

One Way Stretch™ – Stretch material that is inserted at the fourchettes zone (between fingers) of some models for optimal flexibility.

Palm reinforcement – Leather, fabric, or PU Grip elements that are designed to enhance the comfort of the glove on the palm side, its grip, and its chafe resistance.

Primaloft® – The best alternative to eiderdown, without its drawbacks. A high-performance thermal insulation material made from a trademarked synthetic microfiber. Developed in 1983 for the U.S. Army as an alternative to goose down, synthetic, insulating, and water-resistant. Offers a high level of comfort in cold weather by retaining the hand's natural heat. Available in different varieties and densities.

PU – Polyurethane. A flexible plastic material.

PU GRIP – A Polyurethane panel whose surface features hollow and textured dots that give it excellent grip in wet conditions. material.

Pull'N'Ride™ – A pull-tab that makes slipping on a glove easier. (A FIVE brand name)

PVC – Polyvinyl chloride. A highly stable plastic material that exists in rigid or flexible forms.

Reflective – Reflective elements that mirror headlight brightness, to make motorcyclists visible to others on the road during night-time riding.

Spandex™ – A Lycra®-based synthetic material, renowned for its elasticity. Used to enhance elasticity over a specific part of the glove.

Spandex™ 4-Way – A Lycra®-based synthetic material, renowned for its elasticity. Stretches in 4 different directions (up-down and left-right). Used to enhance the overall elasticity of the glove.

SuperFabric® – A material that is highly resistant to skids and to sharp or pointed elements, made of a fabric base whose surface is covered with a multitude of textured resin dots that form a protective barrier. It is also weatherproof and breathable. We use it mostly on our high-performance gloves.

Synthetic Leather – For FIVE, a fine substitute for natural suede leather. Used mainly on the palm side due to its elasticity, durability, and comfort. Machine washable. A vegan material.

Thermo + – An innovative FIVE concept in winter glove insulation that reduces heat loss between the fingers and offers up to 20% thermal gain. Unlike in classic glove construction, the area between the fingers hosts insulation that is equivalent to that on the top side of the hand and not the thinner insulation on the palm. The resulting insulation creates a more efficient thermal barrier that keeps the hand's natural heat inside the glove.

Thenar – The rounded, muscular mound on the upper part of the hand, underneath the thumb.

Touch Screen™ – The inclusion of elements that allow for the handling of touchscreens without removing your glove. It is most often found on the index or the index finger and thumb, depending on the particular style of glove. (A FIVE brand name)

TPR – Thermo-Propylene Rubber. A material that can be molded or extruded above its melting point. Used as a decorative or protective element on our gloves.

TPU – Thermo-polyurethane. A plastic material that can be variably firm or flexible, obtained through thermo-molding. We use it for some of our protective shells.

TT / Tourist Trophy – A motorcycle race that is regarded as the most dangerous in the world. It takes place over the roadways of the Isle of Man (UK). Official FIVE rider Peter HICKMAN, equipped with RFX Race gloves, holds the all-time average speed record for this race (218 km/h - 135 mph), and has claimed victories in all its categories.

V-Entrance™ – A specific method of assembling the wristband elements, developed by FIVE to make it easier to slip on the glove. (A FIVE brand name)

Vegan Friendly – A synthetic glove that contains no elements of animal origin in its composition.

Velcro – A contact closure system using tiny hooks and textile loops, commonly known as «scratch» in French.

Water-repellent fabric – Fabric with a texture that allows water droplets to slip over its surface and thus slow their penetration into the glove.

WP – Weatherproof. A glove that features a waterproof, breathable membrane and can be used in the rain, because it keeps hands dry.

SPECIAL THANKS : To our 2024 cover girl and model Alison.

To our ambassadors: 2x SSP World Champion and model Sébastien CHARPENTIER (Intro, Racing & Street) and moto-sport legend "JMB 111" Jean-Michel BAYLE (Trail-Adventure).

To our amazing models and riders: Alison (Woman) / Virgil AUBRIOT (Urban, Winter) / Cédric BARRIAL (Street) / Mehdi BENDREF (Custom) / Théo BOLLEY (Winter) / Guillaume CUREL (Trail-Adventure) / Tim DURAND & Louis LUTTRINGER (Heated Gloves) / Thomas GRENIER (Street) / Cédric LEFEVRE (Street) / Stef F (Trail-Adventure, Winter). To Enduro rising star and model Zach PICHON.

To Team HONDA SR, their riders Valentin GUILLOD and Stephen RUBINI and mechanics (MXF Race and MXF1 photoshoot).

To our friends at Moto Park & Suttel Group who have welcomed our shooting staff several times, MotoShop 34, BMW Moto Sud 34, Ducati Montpellier, Honda Motosport Montpellier, BMW Grand Prix 74 Anney, Triumph Anney, for loaning us bikes and equipment. To Moto Club des Costières (MCDC) and to Pôle Mécanique d'Alès Cévennes for letting us ride on their racing tracks. To our amazing riders, both official and unofficial. To our lovely distributors, dealers and customers around the world. And to everyone who helped make this 2024 collection and catalog so great :)

PRODUCT DESIGN & DEVELOPMENT : Seb ARPUTZO, Guillaume SCIUS, Mélys POTTIER, Boris CHAMBON, Matthieu LALLOZ.
