

A motorcyclist wearing a black jacket and a colorful helmet is riding a motorcycle on a winding asphalt road that curves through a lush, green mountain landscape. The motorcycle is equipped with several GIVI storage bags: a large silver and black top case, a smaller black side case, and a black pannier bag. The license plate is blue with the text 'GV 14749'. The background shows steep, rocky hillsides with patches of green grass and a clear sky. A red banner is at the top right, and another red banner is at the bottom of the page.

The fitting solutions proposed and displayed in this catalogue may not comply with all the Laws in force in some Countries. Therefore it is the responsibility of the purchaser of GIVI products to verify that the products they are purchasing do not conflict with the rules in force in their Country of residence or in any Countries they intend to visit on their motorcycle. In the light of this, each picture, graphic representation or suggested solution is not intended as a guarantee of the conformity of GIVI products with the rules in force in each Country. All trademarks, names and pda models cited are property of the respective Companies. NB: The pictures shown in the catalogue are only examples from the GIVI range and are for illustration purpose only. GIVI reserves the right to modify whole or in part, add or delete the products shown without notice.

# FITTING SYSTEM

SYSTEM

## FOR TOP CASES

### MONOKEY® SYSTEM

Monokey®, patented by GIVI, is the most widespread fitting system for hard cases and side cases. Simple to use, it allows operation with only one key both the opening of the case top and the detachment of the case from the fitting plate. All the Monokey® products combine the best characteristics of mechanical resistance and rigidity of the fitting, with features using compact and light components.

### MONOLOCK® SYSTEM

In order to offer a wider range of applications and uses, GIVI has introduced Monolock®. Following the same philosophy that defines the Monokey® fitting system; this second solution is mostly made for lighter vehicles, such as scooters and maxi-scooters. As well as for Monokey®, the opening of the case top shell and the detachment of the case from the plate are operated with one key only.

### CRABLOCK® SYSTEM

The new Crablock system allows the top case to be released from the plate by turning a lever positioned on the inside. This patent-pending system makes it safer to remove the top case, as it can only be unhooked when it is open. The Alpina topcase, equipped with Crablock system, is compatible with Monolock plates.

## FOR SIDE CASES

### MONOKEY® CAM-SIDE SYSTEM

The Trekker Outback are cases studied especially for the off-road use. For this reason it has been studied that the new Monokey® Cam-Side system, fixes the case in four different points maintaining at the same time the possibility to release from the rack quickly. The specific side-case holders are the PLR\_CAM and PLR\_CAM that are fixed to the bike in different points, in order to strengthen the structure. Besides the panel of the frame where the case is linked, it is better if the rubber supports points are moved in the perimetric zones of the case.

### MONOKEY® SIDE SYSTEM

Patented by GIVI, Monokey® Side introduces new advanced technical features and some other points of interest: the cases that adopt Monokey® Side can be recognized by the shaped profile of the bottom and by the addition of two new fixing points, composed by "sleds". The latter receive the disengagement movement from the case release button and determine a significant and further increase in overall stability. Monokey® Side allows greater adhesion of the case to the side of the motorcycle, improving the aerodynamic aspect.

### TECH3 SYSTEM

The new TECH 3 system represents an interesting evolution and are designed to fit a pair of V37 cases. The design of the new PX\_ side-case holders makes them less visible when the side cases are not fitted. Indeed, the new TECH 3 system comprises two separate supports, without the traditional 'coupling box', and does not require a connecting bridge between the left and right frames. The first case anchor point is in the passenger footpeg area, while the upper frame portion is fitted at the top of the motorbike.
